Subject: **Soil and Groundwater Investigation Report**
Crown Chevrolet Cadillac Isuzu
7544 Dublin Boulevard and 6707 Golden Gate Drive
Dublin, California
Fuel Leak Case No. RO0003014

Dear Mr. Khatri:

Enclosed please find the *Soil and Groundwater Investigation Report* for the Crown Chevrolet Cadillac Isuzu site at 7544 Dublin Boulevard and 6707 Golden Gate Drive in Dublin, California (Fuel Leak Case No. RO0003014, GeoTracker Global ID T10000001616). This report summarizes soil and groundwater investigation activities conducted by AMEC Geomatrix, Inc. (AMEC), on behalf of Crown Chevrolet Cadillac Isuzu, in September 2010.

I declare under penalty of perjury that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge.

Please contact me at (925) 556-3201 or Avery Patton of AMEC at 510-663-4154 if you have any questions regarding this report.

Sincerely yours,

Patrick Costello
Owner
Crown Chevrolet Cadillac Isuzu

SOIL AND GROUNDWATER INVESTIGATION REPORT

Crown Chevrolet Cadillac Isuzu
7544 Dublin Boulevard and 6707 Golden Gate Drive
Dublin, California

AMEC Geomatrix, Inc. (AMEC), has prepared this report on behalf of Crown Chevrolet Cadillac Isuzu for the property located at 7544 Dublin Boulevard and 6707 Golden Gate Drive in Dublin, California (the site; Figure 1). This report presents the results of soil and groundwater sampling conducted by AMEC at the site from September 27 through 29, 2010.

1.0 OBJECTIVES

The objectives of the soil and groundwater sampling were to attempt to identify potential contamination source areas and delineate the extent of impacts associated with such source areas at the site.

2.0 BACKGROUND

The site is located on the relatively flat floor of a valley that extends to the north-northwest, toward San Ramon and Danville. The closest water body is a creek that flows through a culvert; the creek flows from a gully west of the site, enters a culvert north of the site, and then bends to the south, passing approximately 1,000 feet east of the site. Groundwater has been encountered at both the Montgomery Ward (Environmental Audit, Inc., 1996) property across Dublin Boulevard to the north of the site and at Quest Laboratory (Bureau Veritas, 2009), immediately south of the site, at depths of ranging from approximately 8 to 16 feet below ground surface (bgs). Groundwater flows to the east-southeast in the vicinity of the site, based on data from monitoring associated with the Montgomery Ward property. A recent investigation at Quest Laboratory identified groundwater flow to the north, toward the site. Later measurements at Quest Laboratory indicated groundwater flow to the southeast.

In October 2008, Basics Environmental, Inc. (Basics), performed a Phase I environmental site assessment, which summarized the site's history and use (Basics, 2008). Another Phase I environmental site assessment was performed by AEI Consultants, and submitted in the same month (AEI, 2008). Based on the Phase I reports, which documented similar information, Basics performed a limited soil and groundwater investigation in February 2009, advancing 10 borings for the collection of soil and grab groundwater samples near potential sources of contamination. The results were documented in a report titled *Limited Phase II Environmental Sampling Report* (Phase II report, Basics, 2009).

In March 2010, ACEH requested a work plan for additional soil and groundwater investigation (ACEH, 2010a). A *Work Plan for Soil and Groundwater Investigation* (work plan) was prepared

by AMEC and submitted to Alameda County Environmental Health Department (ACEH) in June 2010 (AMEC, 2010), and approved by ACEH on August 20, 2010 (ACEH, 2010b).

3.0 FIELD AND LABORATORY METHODS

Activities performed during the September 2010 soil and groundwater investigation included collection and analysis of soil and grab groundwater samples from twelve locations at the site (Figure 2). A sampling matrix (Table 1) summarizes samples collected and analyses performed.

Prior to conducting the field work, AMEC obtained a drilling permit from Zone 7 Water Agency (Appendix A). Additionally, AMEC marked the proposed boring locations with white paint, contacted Underground Service Alert, in accordance with state law, and contracted with a private utility locator to check boring locations for underground utilities.

3.1 FIELD METHODS

Twelve soil borings were advanced under the supervision of an AMEC field geologist using dual-tube, direct-push technology, from September 27 through 29, 2010. The borings were advanced to total depths ranging from 15 to 20 feet below ground surface (bgs) by PeneCore Drilling, of Woodland, California, a California C57-licensed contractor.

The recovered soil core from each soil boring location was described by an AMEC field geologist, under the supervision of an AMEC California Professional Geologist, using the visual-manual procedures of the ASTM International Standard D 2488 for guidance, which is based on the Unified Soil Classification System (USCS). Recovered soils were generally screened for the presence of volatile organic compounds (VOCs) using a photoionization detector (PID). The recorded PID readings are shown on the lithologic logs prepared for each boring (Appendix B).

Soil samples were collected based on field observations of potential contamination (e.g., staining, odor, or PID reading), or, in the absence of observations of potential contamination, samples were collected from 3.0 feet bgs and/or from near the top of the zone of saturation, in accordance with the work plan. In some cases where samples were collected based on observations of potential contamination, additional samples were collected above and below the potentially contaminated sample to help vertically delineate possible impacts to soil.

Soil samples for analysis of volatile compounds (i.e., VOCs and total petroleum hydrocarbons as gasoline [TPHg]) were collected into laboratory-supplied volatile organic analysis (VOA) containers, equipped with preservatives appropriate for the desired analyses, using a new, clean plastic plunger for each sample. Soil samples for other analyses were collected into laboratory-supplied jars.

Once each soil boring had been advanced to total depth, at locations where the work plan called for a grab groundwater sample to be collected (i.e., all locations except SB-09), temporary

polyvinyl chloride (PVC) casing with a 0.01-inch slotted screen was installed in the boring, and the outer casing was retracted to allow groundwater to enter the boring. Prior to collection of each groundwater sample, the casing was purged using a peristaltic pump and new, disposable tubing. Purging continued until the water was relatively clear (up to approximately 0.4 gallons of water was purged from each boring). Following purging, a grab groundwater sample was collected into laboratory-provided containers equipped with preservatives appropriate for the desired analyses, using the same methodology as was used to purge the boring.

The soil and groundwater samples were immediately labeled with unique identifiers and placed into zip-closure plastic bags. Samples were stored in ice-chilled coolers pending transport under AMEC chain-of-custody procedures to TestAmerica Laboratories, Inc., of Pleasanton, California, a California Department of Public Health−certified analytical laboratory.

Following completion of sampling, the borings were backfilled using a tremie pipe from total depth to ground surface with neat cement grout.

3.2 LABORATORY ANALYTICAL METHODS

The soil and grab groundwater samples were analyzed for one or more of the following analyses:

- VOCs, including benzene, toluene, ethylbenzene, and xylenes (BTEX, collectively), and methyl tert-butyl ether (MTBE), using U.S. Environmental Protection Agency (U.S. EPA) Method 8260B; or for BTEX and MTBE only.
- TPHg using U.S. EPA Method 8260B.
- Total petroleum hydrocarbons quantified as diesel (TPHd) and motor oil (TPHmo) using U.S. EPA Method 8015B, following a silica gel preparation procedure in accordance with U.S. EPA Method 3630C. In addition, from each boring where a groundwater sample was collected for TPHd and TPHmo analyses, a duplicate grab groundwater sample was collected and filtered by the laboratory using a 0.7-micron glass-fiber filter prior to analysis, in order to provide an analysis that limits representation of TPH in the extractible range that may be adsorbed onto sediment present in the grab groundwater samples.
- Polynuclear aromatic hydrocarbons (PAHs) using U.S. EPA Method 8270C with selective ion monitoring (SIM).
- Total chromium using U.S. EPA Method 6020. The work plan specified that samples would be analyzed for dissolved total chromium; however, the laboratory initially performed the analyses with unfiltered samples. After this error was noted, the analytical laboratory used some remaining sample volume (from a different, unpreserved container) to filter and perform a dissolved total chromium analysis. All laboratory results (filtered and unfiltered) are presented in this report.
- Dissolved hexavalent chromium using U.S. EPA Method 7199.

3.3 DATA QUALITY REVIEW

AMEC evaluated the analytical data using guidelines set forth in the U.S. Environmental Protection Agency's (EPA's) USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review (U.S. EPA, 2008), and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review (U.S. EPA, 2010).

Quality assurance procedures for soil samples included the collection and analysis of one matrix spike/matrix spike duplicate (MS/MSD) sample; laboratory analysis of method blank samples, surrogate spikes, and laboratory control samples/laboratory control sample duplicates (LCS/LCSDs); and evaluation of the analytical results.

Quality assurance procedures for groundwater samples included the collection and analysis of one blind field duplicate sample and two MS/MSD samples; laboratory analysis of method blank samples, surrogate spikes, and LCS/LCSDs; and evaluation of the analytical results.

Based on an evaluation of data quality, some data were qualified as positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample (qualified with "J"); some data were qualified as estimated quantities that may be biased low (qualified with "J-"); and some data were qualified as not detected at a level greater than or equal to the laboratory reporting limit, but the laboratory reporting limit is approximate and may be inaccurate or imprecise (qualified with "UJ"). Overall, the results of the data quality review indicate that the analytical results are valid and useable. The data, as qualified, are acceptable and can be used for decision-making purposes; however, the limitations identified by the applied qualifiers should be considered when using the data. The complete data quality review is included in Appendix C.

3.4 INVESTIGATION-DERIVED WASTE

Monitoring well purge water, equipment decontamination water, and soil cuttings were generated during the drilling and sampling activities performed at the site in September 2010. The purge water and equipment decontamination water were combined and placed in one Department of Transportation (DOT)–approved, 55-gallon drum. The soil cuttings were placed in a second DOT-approved 55-gallon drum. The drums are stored at the site pending disposal by a licensed contractor. One soil sample (IDW-1) and one water sample (IDW-2) were collected from the drums for waste characterization purposes. Copies of the laboratory analytical reports and sample chain-of-custody records are included in Appendix D.

4.0 RESULTS

The field observations and laboratory analytical results for the soil and grab groundwater sampling performed in September 2010 are summarized below. The laboratory analytical results are presented in Tables 2 through 5 and on Figures 3 through 7. Table 1 provides a

matrix of samples and analyses. Copies of the laboratory analytical reports and sample chain-of-custody records are included in Appendix D.

The laboratory analytical results are compared to Environmental Screening Levels (ESLs) published by the California Regional Water Quality Control Board, San Francisco Bay Region (Regional Water Board), based on a residential land use scenario, and assuming that groundwater is a drinking water resource (Regional Water Board, 2007). The ESLs are conservative screening levels that correspond to an acceptable risk level; concentrations of the constituents below their respective ESLs can be considered to pose no significant risk. Concentrations of constituents above their respective ESLs do not necessarily indicate a risk is present, but rather suggest that additional scrutiny is warranted.

4.1 FIELD OBSERVATIONS

Soil encountered during this investigation consisted of lean clay with varying amounts of sand, to the total explored depth of 20 feet bgs, with the exception of thin (up to 0.6-foot-thick) lenses of clayey sand in borings SB-06, SB-07, and SB-08, at depths ranging from 6.5 to 13.5 feet bgs. Additionally, clayey sand with gravel (likely fill material) was present from beneath the concrete slab at the ground surface to approximately 4.7 feet bgs in boring SB-04, and from approximately 1.5 to 4.5 feet bgs in boring SB-10.

Saturated soil was not observed, likely due to the clay content of the soil. However, groundwater was measured prior to sampling at depths ranging from 9.2 to 15.5 feet bgs in the borings (the depth to groundwater was not measured in borings SB-04, SB-09, and SB-12).

Discoloration and/or elevated PID readings were encountered in several of the borings. PID readings up to 26 parts per million (ppm) were recorded from approximately 11 to 13 feet bgs in boring SB-02, and from approximately 5.5 to 8.5 feet bgs in boring SB-10. PID readings up to 5,800 ppm were recorded from approximately 3.0 feet bgs in boring SB-03, where VOCs were part of the analytical suite (Section 4.2.3); however, equipment malfunction prevented collection of PID readings from deeper soil in boring SB-03, as well as from boring SB-05. Greenish-colored soil, which may indicate the presence or former presence of petroleum hydrocarbons, was encountered in borings SB-01 through SB-05, and SB-09, at varying depths (see Appendix B).

4.2 SOIL ANALYTICAL RESULTS

Analytical results for soil samples collected during the September 2010 investigation are discussed in the following sections.

4.2.1 Total Petroleum Hydrocarbons

Results for TPH in soil are presented in Table 2 and on Figure 3, which also presents the results from Basics' investigation in 2009. TPHg was detected in three soil samples from three borings

(SB-01, SB-02, and SB-03). TPHg was detected at 1,200 mg/kg in the 3.2-foot sample from boring SB-03, exceeding the ESL of 83 mg/kg. However, the chromatogram for this sample did not resemble the gasoline standard; the TPHg value reported is likely due to the presence of non-gasoline VOCs in the sample (Section 4.2.3). No other TPHg results exceeded the ESL.

TPHd was detected in five soil samples from five borings, and TPHmo was detected in one soil sample; no TPHd or TPHmo results exceeded their respective ESLs.

4.2.2 Polynuclear Aromatic Hydrocarbons

Results for PAHs in soil are presented in Table 2 With the exception of low levels of naphthalene (detected at concentrations up to an estimated 9.4 mg/kg, well below the ESL of 1,300 mg/kg) detected in four soil samples from three borings (SB-06, SB-08, and SB-09), PAHs were not detected in any soil samples.

4.2.3 Volatile Organic Compounds

Results for VOCs in soil are presented in Table 3 and on Figure 4, which also presents the results from Basics' investigation in 2009. Results for chlorobenzene (detected at concentrations up to 90,000 µg/kg), 1,2-dichlorobenzene (detected at concentrations up to 30,000 µg/kg), and/or 1,4-dichlorobenzene (detected at concentrations up to 5,400 µg/kg) in soil were greater than their respective ESLs for samples collected from four depths (i.e., from approximately 2.8 to 11.5 feet bgs) from boring SB-03, adjacent to a sump in the area known as Service Area 2 of Building B at the site.

4.3 GRAB GROUNDWATER ANALYTICAL RESULTS

Analytical results for grab groundwater samples collected during the September 2010 investigation are discussed in the following sections.

4.3.1 Total Petroleum Hydrocarbons

Results for TPH in groundwater are presented in Table 4 and on Figure 5, which also presents the results from Basics' investigation in 2009. TPHg was detected in groundwater from one boring (SB-02). Where analyzed, TPHd was detected in unfiltered groundwater samples from two borings (SB-07 and SB-12), and TPHmo was not detected in the filtered or unfiltered groundwater samples from any boring. No TPHg, TPHd, or TPHmo results for groundwater exceeded their respective ESLs. It should be noted that the laboratory reporting limits for all TPHmo analyses (i.e., from 300 to 320 µg/L) exceed the ESL of 100 µg/L. However, the method detection limit for unfiltered TPHmo analyses is 130 µg/L (and is up to 140 µg/L for filtered TPHmo analyses); TPHmo was not detected at or above the method detection limit in any sample.

The groundwater results presented above contrast with the findings of the Basics investigation in 2009, where the results for TPH in groundwater exceeded ESLs for all samples collected.

Potential reasons for this distinction include analytical methodology and sampling methodology, as discussed further below.

Regarding analytical methodology, AMEC requested that the laboratory perform a silica gel preparation procedure prior to analysis of samples for TPHd and TPHmo analyses. The purpose of the silica gel preparation is to remove polar compounds which can bias total petroleum hydrocarbon analyses using EPA Method 8015. Petroleum hydrocarbons are non-polar compounds, but many naturally occurring hydrocarbons, such as those found in organic material from plants, are polar. A silica gel preparation procedure was not performed prior to analysis for TPHd and TPHmo on the samples collected by Basics in 2009. It is therefore likely that non-petroleum hydrocarbons contributed to the quantitation of TPH in the 2009 investigation.

Regarding sampling methodology, AMEC used a dual-tube sampling system to advance the soil borings, which allows the soil core to be removed from the boring without removing the outer casing. Basics used a sampling system in which the sampling barrel is completely removed from the borehole every five feet in order to retrieve a sample. Using such a technique, it is possible for shallower soil or materials from the ground surface to enter the boring before a sample is collected.

Furthermore, copies of the laboratory analytical reports included in Basics' Phase II report indicated that each groundwater sample contained at least 1% sediment. It is therefore possible that the results of the 2009 investigation overestimate the concentrations of TPH dissolved in groundwater due to quantification of hydrocarbons that may have been adsorbed onto sediment particles rather than dissolved in the groundwater.

4.3.2 Polynuclear Aromatic Hydrocarbons

Results for PAHs in groundwater are presented in Table 4. PAHs were not detected in any groundwater samples.

4.3.3 Volatile Organic Compounds

Results for VOCs in groundwater are presented in Table 5 and on Figure 6, which also presents the results from Basics' investigation in 2009. Results for benzene (detected at 1.5 µg/L), chlorobenzene (detected at 84 µg/L), and 1,2-dichlorobenzene (detected at 42 µg/L) in groundwater were greater than their respective ESLs for the samples collected from boring SB-03, adjacent to the sump in the area known as Service Area 2 of Building B at the site. Tetrachoroethene, trichloroethene, cis-1,2-dichloroethene, and 1,4-dichlorobenzene, were also detected in the groundwater sample from boring SB-03; however, these concentrations were below their respective ESLs. VOCs were not detected in any of the other groundwater samples analyzed for VOCs.

4.4 CHROMIUM

Four grab groundwater samples (i.e., SB-05, SB-06, SB-07, and SB-08) were analyzed for total and hexavalent chromium; results are presented in Table 5 and on Figure 7, which also presents the results from Basics' investigation in 2009. The September 2010 investigation results are discussed below.

- Dissolved hexavalent chromium was detected in all samples analyzed; no results exceeded the ESL.
- Total chromium (unfiltered) was detected in all samples analyzed; the result for sample SB-06 (250 µg/L) exceeded the ESL for total chromium (50 µg/L).
- Dissolved total chromium was detected in all samples analyzed. The results ranged from 2.3 to 3.3 µg/L, well below the ESL for total chromium (50 µg/L); however, the results are estimated quantities, and may be biased low, as discussed below.

The work plan specified that the samples would be analyzed for dissolved total chromium; however, the laboratory initially performed the analyses with unfiltered samples. Therefore, the resultant total chromium values likely overestimate the concentration of chromium that is dissolved in groundwater. After this error was noted, AMEC requested that samples SB-05, SB-06, SB-07, and SB-08 be reanalyzed by the analytical laboratory, which filtered some remaining sample volume (from a different, unpreserved container) and then performed dissolved total chromium analysis on each sample. However, since the unfiltered samples were stored in unpreserved glass containers, rather than being filtered and then stored in preserved plastic containers as required by the analytical method, the dissolved total chromium results were qualified as estimated and may be biased low. The data qualification is discussed further in the data quality review (Appendix C).

5.0 CONCLUSIONS AND RECOMMENDATIONS

Conclusions and recommendations based on evaluation of the results of the soil and groundwater sampling conducted in September 2010 and reported herein and the results of Basics' investigation in 2009 are presented below.

5.1 SOIL

No source of TPH in soil has been identified. The TPHg detection in boring SB-03 is likely due to the presence of non-gasoline VOCs, as discussed in Section 4.2.1.

Based on the results of our September 2010 investigation and Basics' 2009 investigation, the source of the VOCs detected in soil is the sump adjacent to the hot parts washer in the area known as Service Area 2 of Building B (Basics, 2008). It is our understanding that the hot parts washer is no longer used. The horizontal and vertical extents of VOCs in soil greater than ESLs have not been fully delineated.

5.2 GROUNDWATER

Basics' investigation in 2009 indicated the presence of TPH in groundwater beneath the site at concentrations that exceeded ESLs. However, our September 2010 investigation found no source of TPH in groundwater, and did not identify TPH in groundwater that exceeded ESLs. Possible reasons for the discrepancy between the results of the two investigations are discussed above, in Section 4.3.1.

Based on the results of this investigation and the Basics investigation in 2009, the source of the VOCs detected in groundwater is the sump adjacent to the hot parts washer in Service Area 2 of Building B (Basics, 2008). Concentrations of VOCs in groundwater did not exceed ESLs in the sample from Basics' boring B10, approximately 60 feet east-southeast of the sump, indicating that VOC concentrations in groundwater rapidly attenuate in the presumed hydraulically downgradient direction from the sump (i.e., east-southeast). Based on this information, VOCs have been adequately delineated in groundwater at the site.

No source of chromium in groundwater has been identified. Basics' investigation in 2009 indicated that dissolved total chromium was present in groundwater above the ESL at one location in Auto Body Shop 2 of Building C. AMEC's initial analysis of total chromium was performed on unfiltered samples, and one result at the eastern property boundary exceeded the ESL. However, subsequent analysis of dissolved total chromium indicated that concentrations of dissolved total chromium in groundwater do not exceed the ESL. Although the results are estimated and may be biased low, the results are well below the ESL.

5.3 RECOMMENDATIONS

AMEC recommends that Crown Chevrolet address the VOC impacts in the vicinity of the existing sump in the area known as Service Area 2 of Building B.

Results from AMEC's investigation indicate the presence of some VOCs in soil above their respective ESLs from approximately 3.0 feet bgs to the maximum depth sampled in boring SB-03 of 11.5 feet bgs. TPHg was also detected above its ESL at 3.2 feet bgs; however, the reported TPHg concentration is likely due to quantification of non-gasoline VOCs present in the sample. Our results also indicate the presence of VOCs in groundwater above ESLs in the vicinity of the sump.

AMEC recommends a limited excavation be performed in the area of the sump in order to remove accessible soil containing VOCs, and dewatering in conjunction with the excavation to reduce the mass of VOCs in groundwater. Confirmation soil sampling from the walls and floor of the excavation should be performed to assess the presence of remaining soil containing VOCs, if any. VOCs remaining in groundwater, following excavation to remove the source material and dewatering, would be expected to naturally attenuate. Groundwater monitoring should be

performed following excavation and dewatering to verify natural attenuation of the VOCs in groundwater.

No further action is recommended relative to chromium, PAHs, and TPH.

SAMPLE AND ANALYTICAL MATRIX[1]

Crown Chevrolet Cadillac Isuzu
7544 Dublin Boulevard and 6707 Golden Gate Drive
Dublin, California

Notes

1. Samples were collected by AMEC Geomatrix, Inc., and analyzed by TestAmerica Laboratories, Inc., of Pleasanton, California.
2. Samples were analyzed for VOCs (including BTEX) and TPHg using U.S. EPA Method 8260B.
3. Samples were analyzed for TPHd and TPHmo using U.S. EPA Method 8015B, following a silica gel preparation in accordance with U.S. EPA Method 3630C.
4. Samples were analyzed for PAHs using U.S. EPA Method 8270C with selective ion monitoring (SIM).
5. Samples were analyzed using U.S. EPA Method 7199 for dissolved hexavalent chromium and U.S. EPA Method 6020 for total and dissolved total chromium.
6. A blind field duplicate sample was collected from boring SB-04, and was labeled as SB-40.

Abbreviations

-- = analysis not performed
bgs = below ground surface
BTEX = benzene, toluene, ethylbenzene, and xylenes, collectively
DUP = a duplicate sample was also collected and analyzed
GW = a groundwater sample was collected
MTBE - methyl tert-butyl ether
PAHs = polynuclear aromatic hydrocarbons
TPHd = total petroleum hydrocarbons quantified as diesel
TPHg = total petroleum hydrocarbons quantified as gasoline
TPHmo = total petroleum hydrocarbons quantified as motor oil
VOCs = volatile organic compounds
X = sample analyzed

TABLE 2

SUMMARY OF TOTAL PETROLEUM HYDROCARBONS AND POLYNUCLEAR AROMATIC HYDROCARBONS IN SOIL [1]

Crown Chevrolet Cadillac Isuzu
7544 Dublin Boulevard and 6707 Golden Gate Drive
Dublin, California

Notes

1. Samples were collected by AMEC Geomatrix, Inc., and analyzed by TestAmerica Laboratories, Inc., of Pleasanton, California. Samples were analyzed for TPHg using U.S. EPA Method 8260B; for TPHd and TPHmo using U.S. EPA Method 8015B, following a silica gel preparation procedure in accordance with U.S. EPA Method 3630C; and for PAHs using U.S. EPA Method 8270C with selective ion monitoring (SIM). Only detected constituents are shown on this table; see associated laboratory analytical reports for individual analytes and reporting limits.
2. Results shown in **bold** exceed their respective Environmental Screening Levels.
3. The laboratory indicated that the spectra for sample SB-03-3.2 does not resemble the pattern for the laboratory's fresh gasoline standard. The TPHg value reported is likely due to the presence of non-gasoline VOCs in the sample.
4. California Regional Water Quality Control Board, San Francisco Region, 2007, Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater, Table A-1. Shallow Soil Screening Level (≤3m bgs), Residential Land Use (groundwater is a current or potential drinking water resource), November, revised May 2008.

Abbreviations

-- = not applicable
< = constituent was not detected at or above the laboratory reporting limit shown
bgs = below ground surface
J = the analyte was positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample
NA = not analyzed
ND = not detected at or above the respective laboratory reporting limits
PAHs = polynuclear aromatic hydrocarbons
TPH = total petroleum hydrocarbons
TPHg = total petroleum hydrocarbons quantified as gasoline
TPHd = total petroleum hydrocarbons quantified as diesel
TPHmo = total petroleum hydrocarbons quantified as motor oil
UJ = the analyte was not detected at a level greater than or equal to the laboratory reporting limit; however, the laboratory reporting limit is approximate and may be inaccurate or imprecise
U.S. EPA = U.S. Environmental Protection Agency

Environmental Screening Level (groundwater is a potential or current drinking water resource) [5]			100	100	100	100	100	--

Notes

1. Samples were collected by AMEC Geomatrix, Inc., and analyzed by TestAmerica Laboratories, Inc., of Pleasanton, California. Samples were analyzed for TPHg using U.S. EPA Method 8260B; for TPHd and TPHmo using U.S. EPA Method 8015B, following a silica gel preparation procedure in accordance with U.S. EPA Method 3630C; and for PAHs using U.S. EPA Method 8270C with selective ion monitoring (SIM). Only detected constituents are shown on this table; see associated laboratory analytical reports for individual analytes and reporting limits.
2. Extra sample volume for samples for TPHd and TPHmo analyses was filtered at the laboratory prior to analysis using a 0.7-micron glass fiber filter.
3. The laboratory reporting limits for all TPHmo analyses (i.e., from 300 to 320 µg/L) exceed the ESL of 100 µg/L. However, the method detection limit for unfiltered TPHmo analyses is130 µg/L (and is up to 140 µg/L for filtered TPHmo analyses); TPHmo was not detected at or above the method detection limit in any sample.
4. Sample SB-40 is a blind field duplicate sample of sample SB-04.
5. California Regional Water Quality Control Board, San Francisco Region, 2007, Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater, Table F-1a, Groundwater Screening Levels (groundwater is a current or potential drinking water source), November, revised May 2008.

Environmental Screening Level (groundwater is a potential or current drinking water resource) [6]			1.0	25	10	5.0	6.0	5.0	5.0	--	11	50	50

Notes

1. Samples collected by AMEC Geomatrix, Inc., and analyzed by TestAmerica Laboratories, Inc., of Pleasanton, California. Samples were analyzed for VOCs using U.S. EPA Method 8260B, for hexavalent chromium using U.S. EPA Method 7199, and for total chromium and dissolved total chromium using U.S. EPA Method 6020. Only detected constituents are shown on this table; see associated laboratory analytical reports for individual analytes and reporting limits.
2. The work plan specified that the samples would be analyzed for dissolved total chromium; however, the laboratory initially performed the analyses with unfiltered samples. Therefore, the resultant total chromium values likely overestimate the concentration of chromium that is dissolved in groundwater.
3. The work plan specified that the samples would be analyzed for dissolved total chromium; however, the laboratory initially performed the analyses with unfiltered samples. After this error was noted, AMEC requested that the analytical laboratory filter some remaining sample volume (from a different, unpreserved container) and perform a dissolved total chromium analysis on each sample. However, since the unfiltered samples were stored in unpreserved glass containers, rather than being filtered and then stored in preserved plastic containers as required by the analytical method, the dissolved total chromium results were qualified as estimated and may be biased low.
4. Results shown in **bold** exceed their respective screening levels.
5. Sample SB-40 is a blind field duplicate sample of sample SB-04.
6. California Regional Water Quality Control Board, San Francisco Region, 2007, Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater, Table F-1a, Groundwater Screening Levels (groundwater is a current or potential drinking water source), November, revised May 2008.

Abbreviations

-- = not applicable
cis-1,2-DCE = cis-1,2 dichloroethene
J- = the result is an estimated quantity, but the result may be biased low
NA = not analyzed
ND = not detected at or above the respective laboratory reporting limits
PCE = tetrachloroethene
TCE = trichloroethene
U.S. EPA = U.S. Environmental Protection Agency

< = not detected at or above laboratory reporting limit shown
J = the analyte was positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample
NA = not analyzed
TPH = total petroleum hydrocarbons
TPHbo = TPH quantified as bunker oil
TPHd = TPH quantified as diesel
TPHg = TPH quantified as gasoline
TPHk = TPH quantified as kerosene
TPHmo = TPH quantified as motor oil
TPHss = TPH quantified as stoddard solvent
µg/L = micrograms per liter

N

0 75 150 Feet

Notes:
1. Results shown in bold exceed their respective screening levels.
2. Only results for unfiltered TPHd and TPHmo samples are shown. See Table 4 for additional information.
3. The laboratory reporting limits for TPHmo analyses exceed the ESL of 100 µg/L. However, the method detection limit for TPHmo analyses is 130 µg/L; TPHmo was not detected above the method detection limit in any sample.
4. Duplicate sample results for SB-04 are shown in parentheses.

Sample location

SB-08	
TPHg	<50
TPHd	<51
TPHmo	<310 3

FOR OFFICE USE

PERMIT NUMBER 2010086
WELL NUMBER _____
APN 941-1500-015-09

PERMIT CONDITIONS
(Circled Permit Requirements Apply)

(A.) GENERAL
1. A permit application should be submitted so as to arrive at the Zone 7 office five days prior to your proposed starting date.
2. Submit to Zone 7 within 60 days after completion of permitted work the original Department of Water Resources Water Well Drillers Report (DWR Form 188), signed by the driller.
3. Permit is void if project not begun within 90 days of approval date.
4. **Notify Zone 7 at least 24 hours before the start of work.**

B. WATER SUPPLY WELLS
1. Minimum surface seal diameter is four inches greater than the well casing diameter.
2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic and irrigation wells unless a lesser depth is specially approved.
3. Grout placed by tremie.
4. An access port at least 0.5 inches in diameter is required on the wellhead for water level measurements.
5. A sample port is required on the discharge pipe near the wellhead.

C. GROUNDWATER MONITORING WELLS INCLUDING PIEZOMETERS
1. Minimum surface seal diameter is four inches greater than the well or piezometer casing diameter.
2. Minimum seal depth for monitoring wells is the maximum depth practicable or 20 feet.
3. Grout placed by tremie.

(D.) GEOTECHNICAL. Backfill bore hole with compacted cuttings or heavy bentonite and upper two feet with compacted material. In areas of known or suspected contamination, tremied cement grout shall be used in place of compacted cuttings.

E. CATHODIC. Fill hole above anode zone with concrete placed by tremie.

F. WELL DESTRUCTION. See attached.

(G.) SPECIAL CONDITIONS. Submit to Zone 7 within 60 days after completion of permitted work the well installation report **including all soil and water laboratory analysis results**.

Approved Wyman Hong Date 9/25/10

APPENDIX C

Data Quality Review

APPENDIX C
DATA QUALITY REVIEW
Crown Chevrolet Cadillac Isuzu
7544 Dublin Boulevard and 6707 Golden Gate Drive
Dublin, California

AMEC evaluated the analytical data using guidelines set forth in the U.S. Environmental Protection Agency's (EPA's) *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (U.S. EPA, 2008), and the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review* (U.S. EPA, 2010).

Quality assurance procedures for soil samples included the collection and analysis of one matrix spike/matrix spike duplicate (MS/MSD) sample; laboratory analysis of method blank samples, surrogate spikes, and laboratory control samples/laboratory control sample duplicates (LCS/LCSDs); and evaluation of the analytical results.

Quality assurance procedures for groundwater samples included the collection and analysis of one blind field duplicate sample and two MS/MSD samples; laboratory analysis of method blank samples, surrogate spikes, and LCS/LCSDs; and evaluation of the analytical results.

The blind duplicate groundwater sample was collected from soil boring SB-04 and labeled SB-40. The groundwater MS/MSD samples were collected from borings SB-04 and SB-07 and the soil MS/MSD sample was collected from boring SB-07.

The data quality review also included a data completeness check of the data packages, a transcription check of sample results, and a review of all laboratory reporting forms. Qualified data are included in the data summary tables in the main body of this report, and data qualifiers are hand-written onto the laboratory analytical reports in Appendix D.

SOIL DATA QUALITY REVIEW

A review of soil data quality is provided in the following sections.

DATA ACCURACY

Data accuracy was assessed by the analysis of LCS, LCSD, MS samples, and MSD samples and evaluation of the recovery of spiked compounds, and is expressed as a percentage of the true or known concentrations. Surrogate recoveries and blank results also were used to assess accuracy.

Spike Compounds

No soil results were qualified due to MS, MSD, LCS or LCSD recoveries.

Surrogate Recoveries

All surrogate recoveries were within their respective quality control criteria.

Method Blanks

There were no detections in the method blank samples.

Other Factors

Other factors influenced data accuracy of soil sample results as reported by the analytical laboratory.

Calibration Range Exceedances

The analytical laboratory noted that one result exceeded the calibration range (i.e., total petroleum hydrocarbons quantified as gasoline (TPHg) in sample SB-01-13.8). The affected result was qualified with "J" to indicate that the analyte was positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample.

Chromatographic Analysis

The analytical laboratory noted that one sample result exhibited a chromatographic pattern that did not match the laboratory standard for the target analyte, TPHg. Volatile organic compounds present in sample SB-03-3.2 were detected in the carbon range used by the laboratory to quantify TPHg; however, the laboratory indicated that the spectra for sample SB-03-3.2 does not resemble the pattern for the laboratory's fresh gasoline standard.

DATA PRECISION

Data precision is evaluated by comparing analytical results from duplicate sample pairs and evaluating the calculated relative percent difference (RPD) between the data sets. Results for LCS/LCSD and MS/MSD samples were evaluated to assess the precision of the analytical methods for the soil sample data.

The RPDs between the MS and the MSD results were greater than acceptable limits for the polynuclear aromatic hydrocarbons (PAH) compounds acenaphthene, acenaphthylene, fluorene, naphthalene, and phenanthrene. The associated project sample results (i.e., soil samples SB-05-0.7, SB-05-11.5, SB-06-3.0, SB-06-11.0, SB-07-13.2, SB-08-15.7, SB-09-4.9, SB-09-11.8, SB-10-11.5, SB-12-12) were qualified with "J" for detected results to indicate that the analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample. Non-detect results were qualified with "UJ" to indicate that the analyte was not detected at a level greater than or equal to the laboratory reporting limit; however, the laboratory reporting limit is approximate and may be inaccurate or imprecise.

The RPDs for the all LCS/LCSD analyses were within criteria.

DATA COMPLETENESS

Completeness is the ratio of the number of valid sample results to the total number of samples analyzed with a specific matrix and/or analysis. The percent complete is calculated by the following equation:

$$\% \text{ Complete} = \frac{\text{(number of valid measurements)}}{\text{(number of measurements planned)}} \times 100$$

The percent complete for soil sample data collected during the September 2010 sampling event is 100 percent.

SUMMARY OF SOIL DATA QUALITY REVIEW

Based on an evaluation of data quality, some data were qualified as estimated (qualified with "J"). Some data were qualified as not detected at or above the laboratory reporting limit; however, the laboratory reporting limit is approximate and may be inaccurate or imprecise (qualified with "UJ"). Overall, the results of the data quality review indicate that the analytical results are valid and useable. The data, as qualified, are acceptable and can be used for decision-making purposes; however, the limitations identified by the applied qualifiers should be considered when using the data.

GROUNDWATER DATA QUALITY REVIEW

A review of groundwater data quality is provided in the following sections.

DATA ACCURACY

Data accuracy was assessed by the analysis of LCS, LCSD, MS samples, and MSD samples and evaluation of the recovery of spiked compounds, and is expressed as a percentage of the true or known concentrations. Surrogate recoveries and blank results also were used to assess accuracy.

Spike Compounds

Results for several analytes were qualified due to MS and MSD recoveries that were outside acceptable laboratory control limits. MS and MSD recoveries were below the laboratory control limits for the PAH compounds benzo(g,h,i)perylene, indeno(1,2,3-cd)pyrene, and dibenz(a,h)anthracene. All associated project sample results (i.e., groundwater samples SB-05, SB-06, SB-07, SB-08, SB-10, SB-12) were non-detect and were qualified with "UJ" to indicate that the analyte was not detected at a level greater than or equal to the laboratory reporting limit; however, the laboratory reporting limit is approximate and may be inaccurate or imprecise.

No results were qualified due to LCS or LCSD recoveries.

Surrogate Recoveries

All surrogate recoveries were within their respective quality control criteria.

Method Blanks

There were no detections in associated method blank samples.

Other Factors

Other factors influenced data accuracy as reported by the analytical laboratory.

Reporting Trace Compounds

At AMEC's request, the analytical laboratory reported the results for total petroleum hydrocarbons quantified as diesel (TPHd) and total petroleum hydrocarbons quantified as motor oil (TPHmo) that were positively identified between their respective method detection limits (MDLs) and the RLs. The TPHd results for groundwater samples SB-07 and SB-12 were qualified with "J" to indicate that the analyte was positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample.

Sample Preparation and Preservation

The work plan specified that the samples SB-05, SB-06, SB-07, and SB-08 would be analyzed for dissolved total chromium; however, the laboratory initially performed the analyses with unfiltered samples. After this error was noted, AMEC requested that samples be reanalyzed by the analytical laboratory using excess groundwater from other sample containers collected from these borings. The sample volume used for the reanalysis was unfiltered and unpreserved between sampling (on September 28 and 29, 2010) and sample extraction (on October 4, 2010), and was stored in a glass container. The laboratory filtered the samples and performed dissolved total chromium analysis. However, since the unfiltered samples were stored in unpreserved glass containers, rather than being filtered and then stored in preserved plastic containers as required by the analytical method, the dissolved total chromium results for samples SB-05, SB-06, SB-07 and SB-08 were qualified with "J-" for detections, to indicate that the result is an estimated quantity, but the result may be biased low.

DATA PRECISION

Data precision is evaluated by comparing analytical results from duplicate sample pairs and evaluating the calculated relative percent difference (RPD) between the data sets. Results for LCS/LCSD and MS/MSD samples and one field duplicate sample were evaluated to assess the precision of the analytical methods. The RPDs for the all LCS/LCSD and MS/MSD analyses were within criteria. There were no detections in the primary sample SB-04 and its field duplicate sample, SB-40.

DATA COMPLETENESS

Completeness is the ratio of the number of valid sample results to the total number of samples analyzed with a specific matrix and/or analysis. The percent complete is calculated by the following equation:

$$\% \text{ Complete} = \frac{(\text{number of valid measurements})}{(\text{number of measurements planned})} \times 100$$

The percent complete for groundwater sample data collected during the September 2010 sampling event is 100 percent.

SUMMARY OF GROUNDWATER DATA QUALITY REVIEW

Based on an evaluation of data quality, some data were qualified as positively identified, and the associated numerical value is the approximate concentration of the analyte in the sample (qualified with "J"); some data were qualified as estimated quantities that may be biased low (qualified with "J-"); and some data were qualified as not detected at a level greater than or equal to the laboratory reporting limit, but the laboratory reporting limit is approximate and may be inaccurate or imprecise (qualified with "UJ"). Overall, the results of the data quality review indicate that the analytical results are valid and useable. The data, as qualified, are acceptable and can be used for decision-making purposes; however, the limitations identified by the applied qualifiers should be considered when using the data.

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

ANALYTICAL REPORT

Job Number: 720-30799-1

Job Description: Crown Chevrolet

For:
AMEC Geomatrix Inc.
2101 Webster Street, 12th Floor
Oakland, CA 94612

Attention: Avery Patton

Approved for release
Afsaneh Salimpour
Project Manager I
11/4/2010 5:03 PM

Afsaneh Salimpour
Project Manager I
afsaneh.salimpour@testamericainc.com
11/04/2010
Revision: 2

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.

A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

TestAmerica Laboratories, Inc.
TestAmerica San Francisco 1220 Quarry Lane, Pleasanton, CA 94566
Tel (925) 484-1919 Fax (925) 600-3002 www.testamericainc.com

Job Narrative
720-30799-1

Comments
No additional comments.

Receipt
Received 3 vials (soil) and 1 soil jar for SB-04-3.0 which is not listed on COC. Logged in as HOLD.

Did not receive enough sample to do MS/MSD for diesel and PAH.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
Method(s) 8260B: The amount of GRO was estimated and high level Meoh Ext. was ND.

Method(s) 8260B: Surrogate recovery for the following sample(s) was outside control limits: SB-01-13.8 (720-30799-1). Evidence of matrix interference is present; therefore, re-analysis was not performed.

No other analytical or quality issues were noted.

GC/MS Semi VOA
No other analytical or quality issues were noted.

GC Semi VOA :

Samples for dissolved TPH(Diesel and Motor oil) were filtered at the lab using 0.7 micron glass fiber filter.

All samples for TPH(Diesel and Motor oil) were analysed with Silica Gel clean up using Method 3630C.

No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: AMEC Geomatrix Inc.

Job Number: 720-30799-1

Lab Section	Qualifier	Description
GC/MS VOA		
	E	Result exceeded calibration range.
	X	Surrogate is outside control limits
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Client: AMEC Geomatrix Inc. Job Number: 720-30799-1

Question	T / F / NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	SEE NCM
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

Job Number: 720-30799-2

Job Description: Crown Chevrolet

For:
AMEC Geomatrix Inc.
2101 Webster Street, 12th Floor
Oakland, CA 94612

Attention: Avery Patton

Approved for release.
Afsaneh Salimpour
Project Manager I
11/4/2010 5:10 PM

Afsaneh Salimpour
Project Manager I
afsaneh.salimpour@testamericainc.com
11/04/2010
Revision: 1

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.

A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

TestAmerica Laboratories, Inc.
TestAmerica San Francisco 1220 Quarry Lane, Pleasanton, CA 94566
Tel (925) 484-1919 Fax (925) 600-3002 www.testamericainc.com

Job Narrative
720-30799-2

Comments
No additional comments.

Receipt
Received 3 vials (soil) and 1 soil jar for SB-04-3.0 which is not listed on COC. Logged in as HOLD.

Did not receive enough sample to do MS/MSD for diesel and PAH.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

GC Semi VOA :
All samples for TPH(Diesel and Motor oil) were analysed with Silica Gel clean up using Method 3630C.

Organic Prep
No analytical or quality issues were noted.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	SEE NCM
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

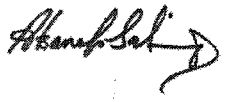
ANALYTICAL REPORT

Job Number: 720-30837-1

Job Description: Crown Chevrolet

For:
AMEC Geomatrix Inc.
2101 Webster Street, 12th Floor
Oakland, CA 94612

Attention: Avery Patton



Approved for release.
Afsaneh Salimpour
Project Manager I

Afsaneh Salimpour
Project Manager I
afsaneh.salimpour@testamericainc.com
11/12/2010
Revision: 4

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.

A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

TestAmerica Laboratories, Inc.
TestAmerica San Francisco 1220 Quarry Lane, Pleasanton, CA 94566
Tel (925) 484-1919 Fax (925) 600-3002 www.testamericainc.com

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA

The spectra for sample SB-03-3.2 does not resemble the pattern for our fresh gasoline standard. Reviewing the spectra reveals that the sample does not have the appearance of the majority of the characteristic aromatic compounds found in fresh or weathered gasoline product .

No analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C SIM: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch #79044 was outside control limits. Non-homogeneity of the sample matrix is suspected. The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance criteria.

Method(s) 8270C SIM: The following sample(s) was diluted due to the abundance of non-target analytes: SB-05-0.7 (720-30837-15). Elevated reporting limits (RLs) are provided.

Method(s) 8270C SIM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch #79141 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

GC Semi VOA

Samples for dissolved TPH(Diesel and Motor oil) were filtered at the lab using 0.7 micron glass fiber filter.

All samples for TPH(Diesel and Motor oil) were analysed with Silica Gel clean up using Method 3630C.

No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	F	MS or MSD exceeds the control limits
	F	RPD of the MS and MSD exceeds the control limits
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Project: 720-30837

Sampled: 09/28/10
Received: 09/30/10
Issued: 10/05/10 18:27

NELAP #01108CA California ELAP#2706 CSDLAC #10256 AZ #AZ0671 NV #CA01531

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Revision: 1

CA ELAP Certification # 2496
The Chain(s) of Custody are included and are an integral part of this report.

A trip blank is required to be provided for volatile analyses. If trip blank results are not included in the report, either the trip blank was not submitted or requested to be analyzed.

TestAmerica Laboratories, Inc.
TestAmerica San Francisco 1220 Quarry Lane, Pleasanton, CA 94566
Tel (925) 484-1919 Fax (925) 600-3002 www.testamericainc.com

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC Semi VOA

All samples for TPH(Diesel and Motor oil) were analysed with Silica Gel clean up using Method 3630C.
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

EXECUTIVE SUMMARY - Detections

Client: AMEC Geomatrix Inc. Job Number: 720-30837-2

Lab Sample ID / Analyte	Client Sample ID	Result / Qualifier	Reporting Limit	Units	Method
720-30837-4	SB-10-4.0				
Silica Gel Cleanup					
Diesel Range Organics [C10-C28]		1.1	1.0	mg/Kg	8015B

METHOD SUMMARY

Client: AMEC Geomatrix Inc. Job Number: 720-30837-2

Description	Lab Location	Method	Preparation Method
Matrix Solid			
8260B / CA LUFT MS	TAL SF	SW846 8260B/CA_LUFTMS	
Closed System Purge and Trap	TAL SF		SW846 5035
Diesel Range Organics (DRO) (GC)	TAL SF	SW846 8015B	
Ultrasonic Extraction	TAL SF		SW846 3550B

Lab References:

TAL SF = TestAmerica San Francisco

Method References:

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Tel (925) 484-1919 Fax (925) 600-3002 www.testamericainc.com

Comments
No additional comments.

Receipt
Per Client request amber glass bottle was filtered on 11/3/10 and then preserved with nitric acid and shipped to our Irvine lab to perform Dissolved Chromium by method 6020.

No other analytical or quality issues were noted.

Salimpour, Afsaneh

From: Stemler, Greg [Greg.Stemler@amec.com]
Sent: Wednesday, November 03, 2010 3:46 PM
To: Salimpour, Afsaneh
Cc: Patton, Avery
Subject: RE: EPA 7199

Afsaneh,
Please do send the following samples to Irvine:
SB-05 (720-30837#14)
SB-06 (720-30837#8)
SB-07 (720-30865#4)
SB-08 (720-30865#2)

We would like these samples run for total dissolved Chromium, however we want to confirm the analyses later tonight or tomorrow morning. We may request both filtered and unfiltered analysis.

For now, please send all the remaining unfiltered, unpreserved sample to Irvine.

Comments
No additional comments.

Receipt
Method(s) 7199: Client complaint received. Details are as follows:

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C SIM: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch #79044 was outside control limits. Non-homogeneity of the sample matrix is suspected. The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance criteria.

Method(s) 8270C SIM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch #79141 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

GC Semi VOA

Samples for dissolved TPH(Diesel and Motor oil) were filtered at the lab using 0.7 micron glass fiber filter.

All samples for TPH(Diesel and Motor oil) were analysed with Silica Gel clean up using Method 3630C.

No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: AMEC Geomatrix Inc. Job Number: 720-30865-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	F	MS or MSD exceeds the control limits
	F	RPD of the MS and MSD exceeds the control limits
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Client: AMEC Geomatrix Inc. Job Number: 720-30865-1

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

Sent: Wednesday, November 03, 2010 3:46 PM
To: Salimpour, Afsaneh
Cc: Patton, Avery
Subject: RE: EPA 7199

Afsaneh,
Please do send the following samples to Irvine:
SB-05 (720-30837#14)
SB-06 (720-30837#8)
SB-07 (720-30865#4)
SB-08 (720-30865#2)

We would like these samples run for total dissolved Chromium, however we want to confirm the analyses later tonight or tomorrow morning. We may request both filtered and unfiltered analysis.

For now, please send all the remaining unfiltered, unpreserved sample to Irvine.

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True
