Subject: RE: Geotracker Uploads for ABF Freight, 4575 Tidewater Ave., Oakland, CA

Hi David,

Normally I wouldn't think we would need to approve a simple well resampling, but to document it to the USTCF that we are in concurrence with your thinking, and to request that the wells be fully redeveloped due to their long disuse (too much chance for the sediment load to confuse the analytical results for groundwater), to measure the total well depths, and to request submittal of the data and interpretations in a report. That could be in a groundwater monitoring report and work plan (or something along those lines). It would definitely be useful information for the site. And I suppose you could now use this email as ACEH concurrence with your thinking! If you do proceed, let me know a couple days ahead. I'm not sure I'll be out, but it might work out. Did I forget something?

Thanks also for the voice mail and update on the status of Geotracker uploads.
Best,

Mark Detterman

Subject: Geotracker Uploads for ABF Freight, 4575 Tidewater Ave., Oakland, CA

Hi Mark-

We will be uploading our historic files to Geotracker today for the subject site. We submitted our application request to Geotracker before September 30, 2011 per your letter dated August 16, 2011 and we are now able to upload the historic files to Geotracker.

We will prepare a letter work plan for your review on or before the November 4, 2011 work plan due date.

We may want to develop and sample the two existing wells that exist on-site before we prepare the work plan to get an idea of what water quality looks like now after 20 plus years of natural attenuation. If we want to develop and sample the wells do you need anything from us or do you want to be on-site during the work. I still have to get client approval for the development and sampling of the wells so I'll be in touch with you if we get the approval to proceed.

If you have any questions, please call.

Thank you,

David
