Re: Byron Power Company, 4901 Bruns Rd., Byron CA

Dear Mr. Wickham:

Attached please find a report, entitled Surface Spill Interim Remedial Action Report, dated December 20, 2013, prepared for Byron Power Company by Quest GeoSystems. As a legal authorized representative of Byron Power, I declare under penalty of perjury that, on information and belief, the information and/or recommendations contained in the attached documents and/or reports are true and correct to the best of my knowledge.

Very truly yours,

William F. Murphy

Encl.

RE: SURFACE SPILL INTERIM REMEDIAL ACTION REPORT

Dear Mr. Wickham,

Quest GeoSystems Management (Quest) has prepared the enclosed report to document the results of the Subsurface Site Characterization performed at the above referenced Site in Byron, California. The site activities summarized in the enclosed report were performed consistent with the work scope outlined in previously submitted *Interim Remedial Action Workplan*, dated November 18, 2012. The investigation was performed consistent with the generally accepted environmental consulting principles and practices that are within the limitations described in the enclosed report. If you have any questions regarding this report, please contact us at (925) 756-1210.

Sincerely,

Quest GeoSystems Management, Inc.

LIMITATIONS

Opinions and recommendations contained in this report apply to conditions existing when services were performed and are intended only for the client, purposes, locations, time frames, and project parameters indicated. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of services. We do not warrant the accuracy of information supplied by others, nor the use of segregated portions of this report.

The completed work summarized herein is intended to be a part of an ongoing interactive process. Additional work may be required to more fully assess the extent of petroleum hydrocarbon (PHC) migration in soil and groundwater. The purpose of a geological/hydrogeologic study is to reasonably characterize existing site conditions based on the geology/hydrogeology of the area. In performing such a study, it is understood that a balance must be struck between a reasonable inquiry into the site conditions and an exhaustive analysis of each conceivable environmental characteristic. Geologic/hydrogeologic conditions may exist at the site that cannot be identified solely by visual observation. Where subsurface exploratory work is performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations. Therefore, no investigation is thorough enough to describe all geologic/hydrogeologic conditions of interest at a given site. Conditions not identified during the study should not be construed as a guarantee of the absence of such conditions at the site, but rather a limitation of the scope of services performed within the scope, limitations, and cost of the work authorized by the client.

This work plan has been prepared by Quest GeoSystems Management for the exclusive use of Byron Power Partners, L.P. (Byron Power) as it pertains to the Site located at 4901 Bruns Road, Byron, California. Our professional services will be performed using the degree of care and skill ordinarily exercised under similar circumstances by other geologists and engineers practicing in this field. No warranty, expressed or implied, is made as to professional advice in this report. Any reliance on this report by a third party is at party's sole risk.

Quest GeoSystems Management Project # G07162013-02

1 INTRODUCTION

This report was prepared by Quest GeoSystems Management, Inc. (Quest) of Rancho Cordova, California on behalf of Byron Power Partners, L.P. (Byron Power). This report summarizes site assessment activities conducted at the Site located at 4901 Bruns Road, Byron, Alameda County, California (Figure 1). The workscope presented below was performed consistent with the previously submitted *Interim Remedial Action Workplan*, dated November 18, 2012; with the requirements of the Alameda County Environmental Health (ACEH), as indicated in their letter dated September 4, 2012; and subsequent workplan approvals dated November 20, 2012, and June 27, 2013. The scope of work completed was intended to demonstrate the remedial effectiveness of the removal of soil impacts related to petroleum hydrocarbons (PHC's) other Constituents of Concern (COC's) at the Site.

1.1 SCOPE OF WORK

The objective of the site assessment was to excavate petroleum-impacted soils in the area of a fuel spill near the edge of a lined surface impoundment in the area and to perform confirmation sampling for PHC's and other COC's. The following work scope was completed in order to achieve the above-referenced objectives:

- ❑ Excavate soil in the area of the fuel spill until the screening of soil indicated the absence of PHC impacts;
- ❑ Collection of representative confirmation soil samples;
- ❑ The samples were delivered under Chain-of-Custody documentation to a State-Certified analytical laboratory for chemical analysis; and
- ❑ Creation of this report, summarizing the results of the assessment.

1.2 BACKGROUND

A description of the Site, the geologic and hydrologic conditions, and the project history are summarized in the following subsections.

1.2.1 Site Description

The Site was operated by Byron Power Partners, L.P. dba Byron Power Company (Byron Power), and is located at 4901 Bruns Road, Alameda County, California and is at an approximate elevation of 104 feet above mean sea level (MSL). Figure 1 is a site location map depicting the regional location of the site.

The rectangular Site is situated in the middle of a larger parcel (County Assessor's Parcel Number 99B-7050-001-10) owned by Mr. Steve Shin-Der and Mrs. Puang J. Lee and encompasses an area of approximately 1.43 acres. The remainder of the property is approximately 158 acres consisting of undeveloped land used for cattle grazing.

1.2.2 Site History

The facility was an electric and thermal energy cogeneration facility, which was in operation from 1991 through 2008. Byron Power operated the facility from 1995 through its closure in 2008.

In May through July of 2008 Quest conducted a Phase I Environmental Assessment of the Site (*Phase I Environmental Assessment Report, APN: 99B-7050-001-10, 4901 Bruns Road, Alameda County, California*). On May 20, 2008, Quest personnel completed the site reconnaissance of the facility. As part of the field reconnaissance, Quest reviewed the facilities Hazardous Materials Business Plan (HMBP), which contained chemical descriptions of hazardous materials maintained at the facility. The following Hazardous Materials Inventory – Chemical Description pages were reviewed and were reported to have been located onsite:

- ❑ Ethylene Glycol - antifreeze;
- ❑ Petroleum Lubrication Oil - waste oil;
- ❑ Mobil Pegasos 805 - motor oil;
- ❑ Brominating Tablets;
- ❑ Mineral Spirits;
- ❑ Meras 2324 – corrosion inhibitor (Polymaleic acid, Hydroxyethylidene diphosphonic acid);
- ❑ Chemisis 6190 - corrosion inhibitor (polyethylene, sodium nitrite);
- ❑ Chemisis 4965 - corrosion inhibitor (unknown); and
- ❑ Chemisis 5520 – defoamer (unknown).
- ❑ Watercare 2381 – defoamer (unknown);
- ❑ Watercare 2323 – water treatment (potassium hydroxide);

In the course of conducting a Phase I Environmental Site Assessment of the Site, Quest personnel identified several areas of surface staining, which appeared to be impacted with petroleum hydrocarbons, and areas of wet soil or standing water.

Quest was retained by Byron Power to conduct a limited subsurface soil investigation in relation to the observations/recommendations identified in Section 6.3.8 of Quest's report titled *Phase I Environmental Assessment Report, APN: 99B-7050-001-10, 4901 Bruns Road, Alameda County, California* (Phase I), dated September 30, 2008.

On July 8, 2011, a Quest representative arrived at the Site to collect representative soil samples from areas of soil staining as identified in the Phase I. Upon arriving at the Site, Quest personnel observed additional areas of stained soils not originally noted in the Phase I report. Based on the field observations, additional soil sampling locations were completed. The samples were collected by hand augering a hole to the sample depths (12 and 24 inches below ground surface [bgs]). A total of six (6) sampling locations (S.01 through S.06) were selected and soil samples were collected at 12 and 24 inches bgs at locations S.01 through S.05, and at 12 inches bgs at location S.06. Initial scraping away of the gravel top cover at the Site revealed soil that appeared to be impacted with PHC's. Notable "green" stained coarse-grained (coarse sand) soil appeared prominent from ground surface to approximately 6 inches bgs. This soil was underlain by a moderately plastic fine-grained soil (silt/clay). Visual impacts to this fine-grained soil appeared to extend to at least 1 foot bgs. A "brown" fine-grained (silt/clay) soil was noted toward the base of each borehole. A total of eleven (11) soil samples were collected and analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-G), diesel (TPH-D), and motor oil

(TPH-MO) by US EPA Method 8015B, Petroleum Oil & Grease (POG) by US EPA Method SM5520E/F, Volatile Organic Compounds (VOC's) by US EPA Method 8260B; Semi-Volatile Organic Compounds (SVOC's) by US EPA Method 8270C, PCB's by US EPA Method 8082, and LUFT 5 Metals by US EPA Method SW6010B. Soil samples collected for chemical characterization were transported to McCampbell Analytical, Inc., a State-certified analytical laboratory (ELAP #1644) of Pittsburg, California.

July 29, 2011 Quest prepared the report *Soil Sampling and Analysis Report* for Byron Power summarizing the results of the limited soil investigation. Based on a review of the analytical data, PHC impacts to soil appeared limited to within 2 feet of the surface in the areas of surficial staining. Excavation and off-site disposal of the upper 2 feet of this soil to an appropriate landfill was recommended as the most feasible remedial method at the Site. Following excavation of the soils it was proposed that an appropriate number of confirmation soil samples should be collected and chemically analyzed to confirm the removal of impacted soils.

On February 23, 2012, ACEH requested the submission of a workplan to evaluate potential soil and groundwater impacts at the Site.

On April 10, 2012, Quest submitted a report titled *Site Assessment Work Plan*, which proposed a subsurface investigation to assess the vertical and lateral extent of soil impacts at the site. The Workplan was subsequently approved by the ACEH in a letter dated May 1, 2012.

On July 2, 2102, Quest conducted subsurface investigation at the Site. The investigation consisted of the completion of six (6) direct push soil borings (SP.01 through SP.06) from which sixteen (16) soil samples and two (2) groundwater samples (SP.01W and SP.03W) were collected and analyzed for key chemical constituents of concern. Soil samples collected from soil probes SP.01 through SP.05 were found to exceed the environmental screening level (ESL) for Phenol for soil above groundwater, which is a current or potential source of drinking water for residential or commercial/industrial land use. However, no soil samples were found to exceed the ESL for groundwater that is not considered or is a potential source of drinking water for residential land use. Groundwater samples from soil probe SP.01 were found to exceed the ESL's for TPH-D, TPHMO, and TBA for groundwater, which is a current or potential source of drinking water for residential or commercial/industrial land uses. No groundwater was encountered during a subsequent resample attempt adjacent to soil probe SP.01 (SP.07) completed on July 2, 2102. On August 6, 2012, Quest submitted a Report summarizing the findings of the investigation at the Site and made recommendations for interim remedial measures.

On September 4, 2012, ACEH responded to the Quest's report submittal July 6, 2012. ACEH requested the submission of a workplan to further evaluate potential soil and groundwater impacts at the Site, and sample sediment and scale noted in and adjacent to the onsite surface impoundment.

On October 26, 2012, Quest submitted a report titled *Workplan For Additional Site Assessment Work Plan*, which proposed to install four (4) groundwater monitoring wells, collect

representative soil and groundwater samples from the wells, and collect soil/sludge and scale samples at the site. The workplan was subsequently approved by the ACEH in a letter dated November 20, 2012.

On January 23, 2013, Quest submitted a report titled *Workplan Addenda*, which proposed to complete fourteen (14) soil probes, and collect representative soil samples from the beneath the building foundation at the site. The workplan was subsequently approved by the ACEH in an email dated January 24, 2013.

1.3 GEOLOGIC AND HYDROLOGIC CHARACTERISTICS

1.3.1 Regional and Local Physiographic Setting

The Site lies within the Coast Ranges Geomorphic Province, which extends approximately 550 miles in a northwest to southeast direction along the coast of California. The Coast Ranges comprises a series of northwest to southeast-trending ridges and narrow valleys, whose orientations are controlled by the fault-dominated geologic structure of the region.

1.3.2 Surface Topographic and Hydrology

Regionally, the general topographic slope of the area is to the north-northeast, ranging from approximately 261 feet above msl in the south to approximately 61 feet above msl to the north of the Site. In the vicinity of the Site, the topography appears relatively level with an elevation of approximately 104 feet above msl (USGS, 1978; EDR, 2008(a)). Surface topography in the vicinity of the Site slopes moderately downward to the north and increases gently to the west. Nearby surface waters include Bethany Reservoir located approximately 0.90 miles southwest of the Site, the California Aqueduct located approximately 1.20 miles west of the Site and the Delta Mendota Canal located approximately 0.70 miles east of the Site. The Site is not identified as being located within the 100-year zone or 500-year zone, as defined by the Federal Emergency Management Agency (FEMA).

1.3.3 Geologic Review

The Site is underlain by soil referred to as the San Ysidro Series loam. The local vicinity surrounding the site is underlain by Altamont Series clay to the south and east, Linne Series clay loam to the northwest and southwest, and Rincon Series clay loam to the southwest, and San Ysidro loam to the north. The State Soil Geographic Database (STATSGO) describes San Ysidro Series loam as moderately well drained soil with high corrosion potential. According to STATSGO database, the hydrologic group is categorized as Class D which are described as clayey, and having a high water or shallow to an impervious layer. In profile, the soil layers include loam from the ground surface to 16 inches below ground surface (bgs). The subsoil is clay from 16 to 33 inches bgs and silty clay loam from 33 inches to 59 inches. Permeability of the subsoil is very slow.

1.3.4 Hydrogeologic Review

The regional groundwater gradient is unknown. Information on the groundwater in the immediate vicinity of the Site is also not readily available. Review of State records (GeoTracker) did not indicate any groundwater monitoring wells near the Site, which could be used to

determine groundwater elevation. However, Quest reviewed boring logs dated May 23, 2006 for the Chevron Holey-Byron Road facility located approximately 2.7 miles north of the Site. According to the boring logs, depth to groundwater ranged from 2 ft to 5 ft bgs.

2 INVESTIGATION SUMMARY

The following sections summarize activities conducted at the Site. The work scope included a field investigation, analytical program, and the preparation of this report of findings. The following sections summarize the investigation completed at the Site.

2.1 SURFACE IMPOUNDMENT REMOVAL AND CONFIRMATION SAMPLING

On December 12, 2012, GEMS Environmental Services, Inc. of Concord, California completed the excavation and off-haul of PHC impacted soil under manifest to an appropriate disposal facility. The area of excavation was limited to the southern edge of the surface impoundment and south adjacent exterior soils. The surface impoundment on this day was inundated with rainwater and therefore soils underneath the surface impoundment could not be adequately excavated or sampled without causing further impacts. With the consultation of ACEH, it was decided to wait till further in the season before continuing with excavation of the surface impoundment to allow the rainwater to evaporate. A total of approximately 7 cubic yards (yd³) of PHC impacted soil was transported under Non-Hazardous Special Waste & Asbestos Manifest to Republic Services Vasco Road Landfill in Livermore, California. The soil was manifested off-site along with soils from the primary remedial excavation under the former evaporator area. During remedial excavation activities, in place soils at the base of the excavation were field screened, for odor, unusual staining, and a headspace analysis was conducted using a photo-ionization detector (PID) to detect the presence of volatile organic compounds (VOC's). Soil excavation continued until screening evidence indicated that PHC impacted soil had been removed from the base of the excavation.

On December 12, 2012, two (2) soil samples were collected from locations adjacent to the former surface impoundment at the Site (Figure 2). The samples were collected by hand augering a hole to the sample depth (approximately 6 inches below grade, into native soil). Then a clean stainless-steel tube was driven 6 inches into the soil with an impact sampler to retain a discrete sample at each sample location. Once each sample was collected, each sleeve was sealed with tight-fitting plastic caps. The soil samples were collected, labeled, and transported under appropriate chain-of-custody. Soil samples collected for chemical characterization were transported to MAI for chemical analysis.

From August 7 and 8, 2013, Vaca Valley Excavation and Trucking, Inc. of Vacaville, California completed the excavation and off-haul of general debris, dry sludge, and excavated soil under manifest to an appropriate disposal facility (Figure 3). A total of approximately xx yd³ of general debris, dry sludge, soil were transported under Non-Hazardous Special Waste & Asbestos Manifest to Republic Services Vasco Road Landfill in Livermore, California. Copies of the waste manifests are presented in Appendix A. During remedial excavation activities, in place soils at the base of the excavation were field screened, for odor, unusual staining, and a headspace analysis was conducted using a PID to detect the presence of VOC's. Soil excavation continued until screening evidence indicated that PHC impacted soil had been removed from the base of the excavation.

On August 8, 2013, soil samples were collected from ten (10) locations within the former surface impoundment at the Site (Figure 2). The samples were collected by hand augering a hole to the sample depth (approximately 6 inches below grade, into native soil). Then a clean stainless-steel tube was driven 6 inches into the soil with an impact sampler to retain a discrete sample at each sample location. Once each sample was collected, each sleeve was sealed with tight-fitting plastic caps. The soil samples were collected, labeled, and transported under appropriate chain-of-custody. Soil samples collected for chemical characterization were transported to MAI for chemical analysis.

2.1.1 Soil Sampling Activities

The samples were collected by hand augering a hole to the sample depth (approximately 6 inches below grade, in to native soil). Then a clean stainless-steel tube was driven 6 inches into the soil with an impact sampler to retain a discrete sample at each sample location. Once each sample was collected, each sleeve was sealed with tight-fitting plastic caps. The soil samples were collected, labeled, and transported under appropriate chain-of-custody. Soil samples collected for chemical characterization were transported to MAI for chemical analysis.

2.2 ANALYTICAL TESTING PROGRAM

Soil samples were collected and preserved in the field for transport to an analytical laboratory. The sample containers were labeled, stored at a temperature of less than 4 degrees centigrade (<4°C), and transported along with appropriate chain-of-custody documentation to MAI for chemical analysis. Soil sample analytical results are included in Tables 1 and 2, and on the certified analytical reports in Appendix B.

2.2.1 Sample Analysis Protocols

The soil samples collected were analyzed for:

- ❑ Total Petroleum Hydrocarbons as Diesel (TPH-D), and as Motor Oil (TPH-MO), and as Gasoline (TPH-G) using U.S. EPA Method 8015M;
- ❑ VOC's using U.S. EPA Method 8260;
- ❑ Semi-Volatile Organic Compounds (SVOC's) using U.S. EPA Method 8270;
- ❑ LUFT 5 Metals using US EPA Method SW6020 (soil samples LSI.01 & LSI.02);
- ❑ CAM-17 Metals using US EPA Method SW6020 (soil samples SI.A01 through SI.C04).

3 FINDINGS

3.1 SOIL SAMPLE ANALYTICAL RESULTS

A total of twelve (12) soil samples were collected from the surface impoundment, and analyzed for key COC's. The analytical results of the samples submitted are summarized in Tables 1 and 2, and on certified analytical reports in Appendix B. The following is a summary of COC's detected in the soil samples:

- Antimony was detected in ten (10) soil samples at concentrations ranging from 0.54 mg/Kg to 1.6 mg/Kg;
- Arsenic was detected in ten (10) soil samples at concentrations ranging from 6.4 mg/Kg to 33 mg/Kg;
- Barium was detected in ten (10) soil samples at concentrations ranging from 46 mg/Kg to 260 mg/Kg;
- Chromium was detected in twelve (12) soil samples at concentrations ranging from 27 mg/Kg to 44 mg/Kg;
- Cobalt was detected in ten (10) soil samples at concentrations ranging from 8.0 mg/Kg to 11 mg/Kg;
- Copper was detected in ten (10) soil samples at concentrations ranging from 17 mg/Kg to 29 mg/Kg;
- Lead was detected in twelve (12) soil samples at concentrations ranging from 6.1 mg/Kg to 8.6 mg/Kg;
- Molybdenum was detected in one (1) soil sample at concentrations of 4.7 mg/Kg;
- Nickel was detected in twelve (12) soil samples at concentrations ranging from 20 mg/Kg to 34 mg/Kg;
- Vanadium was detected in ten (10) soil samples at concentrations ranging from 49 mg/Kg to 63 mg/Kg;
- Zinc was detected in twelve (12) soil samples at concentrations ranging from 42 mg/Kg to 62 mg/Kg; and
- No other key COC's were identified at or above their respective detection limit.

4 EVALUATION

Based on the review of the subsurface data, hydrogeologic data, and analytical results of this investigation, petroleum hydrocarbon impacted soil and surficial water was identified at the Site. The following sections evaluate the collected data, and compare the findings with current State and Federal guidelines for subsurface soils and groundwater.

4.1 REGULATORY EVALUATION

California Regional Water Quality Control Board, San Francisco Bay Region - ESL's

In May 2008 the staff of the San Francisco Bay Regional Water Quality Control Board (SFRWQCB) prepared a technical document entitled Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater (Interim Final – November 2007) [SFRWQCB, 2008]. This document establishes Environmental Screening Levels (ESL's) for chemicals commonly found in impacted soil and groundwater. The intent of the document is to help expedite the preparation of environmental risk assessments at sites where impacted soil and groundwater have been identified as an alternative to preparing a formal risk assessment. In this process, soil and groundwater data collected at a site can be directly compared to the ESL's and the need for additional work evaluated. The SFRWQCB (SFRWQCB, 2008) issued tabulated ESL data for constituents of concern, which were subdivided into tables. In particular, the tables were organized to assess Land Use, Depth of Impacted Soil, and Groundwater Utility.

4.1.1 Subsurface Soil Guideline Evaluation

Analytical results indicated the presence of PHC's in soil samples collected during this investigation and submitted for chemical analysis. The following summarize analytical results as they relate to regulatory requirements/guidelines:

SFRWQCB ESL

Soil depths encountered at the Site were found to be less than 3 meters (9.8 feet) bgs. Tables A and B of SFRWQCB (2008) were used for the evaluation of PHC's in soil at the Site. The following evaluations are reviewed against Residential ESL's for specific detected COC's:

- ❑ Antimony: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water for residential (6.3 mg/Kg) or commercial/industrial land uses (40 mg/Kg);
- ❑ Arsenic: Ten (10) soil samples were found to exceed the ESL for water that is considered or is a potential source of drinking water for residential (0.39 mg/Kg) or commercial/industrial land uses (1.6 mg/Kg). No (0) soil samples were found to exceed the regional background concentration of 20 mg/Kg;
- ❑ Barium: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water for residential (750 mg/Kg) or commercial/industrial land uses (1,500 mg/Kg);
- ❑ Chromium: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water for residential (1,000 mg/Kg) or commercial/industrial land uses (2,500 mg/Kg);

- ❑ Cobalt: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water for residential (40 mg/Kg) or commercial/industrial land uses (80 mg/Kg);
- ❑ Copper: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water (230 mg/Kg) for residential or commercial/industrial land uses;
- ❑ Lead: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water for residential (250 mg/Kg) or commercial/industrial land uses (750 mg/Kg);
- ❑ Molybdenum: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water (40 mg/Kg) for residential or commercial/industrial land uses;
- ❑ Nickel: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water (150 mg/Kg) for residential or commercial/industrial land uses;
- ❑ Vanadium: Twelve (12) soil samples were found to exceed the ESL for water that is considered or is a potential source of drinking water for residential (16 mg/Kg). No (0) soil samples were found to exceed the ESL for water that is considered or is a potential source of drinking water for commercial/industrial land uses (200 mg/Kg). No (0) soil samples were found to exceed the regional background concentration of 90 mg/Kg;
- ❑ Zinc: No (0) soil samples were found to exceed the ESL for water that is December 20, 2013 considered or is a potential source of drinking water (600 mg/Kg) for residential or commercial/industrial land uses; and
- ❑ No other key COC's were identified as exceeding their respective ESL.

Discussion

Based on the evaluation above, arsenic and vanadium were the only analytes found to exceed the residential land use ESL's. Arsenic was the only analyte found to exceed the commercial/industrial land use ESL for water that is considered or is a potential source of drinking water. No metal was found to exceed their respective regional background concentration.

5 CONCLUSIONS

5.1 SURFACE IMPOUNDMENT SOIL CONDITIONS

Arsenic was the only analyte found to exceed the commercial/industrial land use ESL for water that is considered or is a potential source of drinking water, but did not exceed published regional background concentrations. No PHC's were identified in the clearance soil samples analyzed. Based on a review of the analytical results and the Site conditions encountered, no further impacts in the area of the surface impoundment exist. Therefore, No Further Action appears warranted.

6 RECOMMENDATIONS

Based on the findings and conclusions of this report it is recommended that the following should be conducted for this Site:

- Based on the conclusions of this report, a No Further Action (NFA) directive should be issued by the ACEH; and
- A copy of this report should be forwarded to ACEH for their review and action.

APPENDIX B
CERTIFIED ANALYTICAL REPORT AND
CHAIN-OF-CUSTODY DOCUMENTATION

Analytical Report

Quest GeoSystems Management 11275 Sunrise Gold Cir., Ste. R Rancho Cordova, CA 95742	Client Project ID: #G09212012-03; Byron Power Company	Date Sampled: 12/12/12
		Date Received: 12/12/12
	Client Contact: Eric Garcia	Date Reported: 12/18/12
	Client P.O.:	Date Completed: 12/17/12

WorkOrder: 1212340

January 04, 2013

Dear Eric:

Enclosed within are:

- 1) The results of the **2** analyzed samples from your project: **#G09212012-03; Byron Power Company,**
- 2) QC data for the above samples, and
- 3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
 Laboratory Manager
 McC Campbell Analytical, Inc.

The analytical results relate only to the items tested.

 NONE

F2 = LCS recovery for this compound is outside of acceptance limits.

BATCH 73214 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1212340-001A	12/12/12 1:30 PM	12/12/12	12/13/12 12:23 AM	1212340-002A	12/12/12 1:35 PM	12/12/12	12/13/12 1:05 AM

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.
 $\% \text{ Recovery} = 100 * (\text{MS-Sample}) / (\text{Amount Spiked}); \text{RPD} = 100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2).$
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.
 NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.
 Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.

All target compounds in the Method Blank of this extraction batch were ND less than the method RL with the following exceptions:
 NONE

BATCH 73141 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1212340-001A	12/12/12 1:30 PM	12/12/12	12/14/12 6:20 PM	1212340-002A	12/12/12 1:35 PM	12/12/12	12/14/12 6:23 PM

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.
 $\% \text{ Recovery} = 100 * (\text{MS} - \text{Sample}) / (\text{Amount Spiked})$; $\text{RPD} = 100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2)$.

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not applicable to this method.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

 $\% \text{ Recovery} = 100 * (\text{MS} - \text{Sample}) / (\text{Amount Spiked})$; $\text{RPD} = 100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2)$.
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.
 NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

Analytical Report

Quest GeoSystems Management 11275 Sunrise Gold Cir., Ste. R Rancho Cordova, CA 95742	Client Project ID: G07162013-02; Byron Power Company	Date Sampled: 08/08/13
		Date Received: 08/09/13
	Client Contact: Eric Garcia	Date Reported: 08/16/13
	Client P.O.:	Date Completed: 08/16/13

WorkOrder: 1308345

August 19, 2013

Dear Eric:

Enclosed within are:

- 1) The results of the **10** analyzed samples from your project: **G07162013-02; Byron Power Company,**
- 2) QC data for the above samples, and
- 3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
 Laboratory Manager
 McC Campbell Analytical, Inc.

The analytical results relate only to the items tested.

Semi-Volatile Organics by GC/MS (Basic Target List)*

Extraction Method: SW3550B

Analytical Method: SW8270C

Work Order: 1308345

Table with Lab ID, Client ID, Matrix, and associated values: 1308345-005A, SI.B02, Soil

Main data table with columns: Compound, Concentration *, DF, MDL, RL, Compound, Concentration *, DF, MDL, RL. Lists various organic compounds and their detection results.

Surrogate Recoveries (%)

Table showing surrogate recoveries: %SS1: 119, %SS2: 116, %SS3: 104, %SS4: 100, %SS5: 91, %SS6: 110

Comments:

* water samples in µg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples and all TCLP & SPL extracts are reported in mg/L.

ND means not detected at or above the reporting limit/method detection limit; N/A means analyte not applicable to this analysis; %SS = Percent Recovery of Surrogate Standard; DF = Dilution Factor

surrogate diluted out of range or surrogate coelutes with another peak.

Table with client information: Quest GeoSystems Management, Client Project ID: G07162013-02; Byron Power Company, Date Sampled: 08/08/13, Date Received: 08/09/13, Client Contact: Eric Garcia, Date Extracted: 08/13/13, Rancho Cordova, CA 95742, Client P.O., Date Analyzed: 08/13/13

Semi-Volatile Organics by GC/MS (Basic Target List)*

Extraction Method: SW3550B

Analytical Method: SW8270C

Work Order: 1308345

Table with Lab ID, Client ID, Matrix, and associated values: 1308345-006A, SI.B03, Soil

Main data table with columns: Compound, Concentration *, DF, MDL, RL, Compound, Concentration *, DF, MDL, RL. Lists various organic compounds and their detection results.

Surrogate Recoveries (%)

Table showing surrogate recoveries: %SS1: 84, %SS2: 81, %SS3: 74, %SS4: 72, %SS5: 65, %SS6: 75

Comments:

* water samples in µg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples and all TCLP & SPL extracts are reported in mg/L.

ND means not detected at or above the reporting limit/method detection limit; N/A means analyte not applicable to this analysis; %SS = Percent Recovery of Surrogate Standard; DF = Dilution Factor

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.
 $\% \text{ Recovery} = 100 * (\text{MS} - \text{Sample}) / (\text{Amount Spiked})$; $\text{RPD} = 100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2)$.

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.

BATCH 80465 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1308345-009A	08/08/13 2:43 PM	08/12/13	08/14/13 9:28 PM	1308345-010A	08/08/13 2:40 PM	08/12/13	08/13/13 12:04 AM

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.
 % Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.
 NR = matrix interference and / or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix, sample diluted due to high matrix or analyte content, or MS/MSD samples diluted due to high organic content.
 #) surrogate diluted out of range; & = low or no recovery of surrogate or target analytes due to matrix interference.
 Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.
 $\% \text{ Recovery} = 100 * (\text{MS-Sample}) / (\text{Amount Spiked}); \text{RPD} = 100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2).$
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.
 NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.
