Subject: RO3080- Bell Cleaners
Entry Type: Phone call
Company: Bonkowski and Associates

Start: Tue 1/29/2013 3:20 PM
End: Tue 1/29/2013 3:25 PM
Duration: 5 minutes

I traded voice mails and eventually spoke with Cindy Dittmar of Bonkowski and Associates re RO3080- Bell Cleaners. Ms. Dittmar called to clarify some questions regarding the ACEH December 2012 DIR and to inform me the former dry cleaner suite had undergone some remodeling. She described the modifications to the suite and said they would be documented in the workplan addendum. She said the suite contained only one floor drain and they have yet to determine the run of the drain line. I interpreted this as the run will be identified prior to workplan submittal. Ms. Dittmar indicated the workplan and SCM could be provided as early as next week. Ms. Dittmar also ran through a soil-gas sampling method which she stated was not outlined in our DTSC reference document. The sampling method did not install a fixed point and used a syringe and vacuum pump to recover the sample. The sample syringe would then be injected into an on-site mobile laboratory. I was unfamiliar with the sampling technique and said I'd look into it.
