Donna,

We have been contracted by Goodyear Tire Company to remove and replace a in-ground hydraulic lift. A previous environmental assessment has found TPH-diesel and oil above the ESLs in a sample collected adjacent to the lift. I spoke with Jerry Wickham and he said that I would need to send over the data to you and that you would decide if the DEH would open a case. Here it is. Please let me know if I need to send anything else over. We are trying to schedule the work. Our plan is to excavate a 10x10x12 ft hole (at lift number 5) to remove the lift and any impacted soil. We will also collect confirmation samples

thanks

Vanessa Diep
