Subject: Soil Sampling and Characterization Report  
UCSF Benioff Children's Hospital Outpatient 2 Clinic  
747 52<sup>nd</sup> Street, Oakland, California

Dear Mr. Hester:

Ninjo & Moore is pleased to submit to Turner Construction Company (Turner) this Soil Sampling and Characterization Report for the UCSF Benioff Children's Hospital Outpatient 2 Clinic project located in the vicinity of 747 52<sup>nd</sup> Street in Oakland, California (Figure 1). The following sections of this report include site background information, project coordination and field activities, sample analytical results and conclusions and recommendations.

## PROJECT BACKGROUND

Turner is currently involved in the construction phase of the UCSF Benioff Children's Hospital Outpatient 2 Clinic project. Construction activities include installation of an underground storage tank (UST), construction of the Outpatient 2 Clinic building, service yard paving and utility trenching. The Outpatient 2 Clinic building and UST and service yard will be constructed at the locations shown on Figure 2. As part of the construction activities, Turner will excavate and direct load existing soil for off Site transport from the UST and service yard area, and the clinic building location. Because the Site does not have adequate space to stockpile excavated soil, Turner requested Ninjo & Moore to collect in-situ samples in order to provide their soil transporter analytical data for assessing offsite disposal options. Ninjo & Moore additionally collected soil samples from a small stockpile generated by Turner from excavating the project's utility trenches.

Turner's planned soil excavation areas include the following:

- Service Yard: the service yard is approximately 4,200 square feet and will require an excavation depth of approximately 1.5 feet, which corresponds to 223 in-situ cubic yards (cy).
- UST: the UST excavation will be performed within the Service Yard area and is planned to be 16 feet by 36 feet by 16 feet deep, which corresponds to 341 in-situ cy.
- Clinic Building: the clinic building is approximately 15,900 square feet and will require an excavation depth of approximately 1.5 feet, which corresponds to 883 in-situ cy. In addition, 83, 2-feet diameter piers will be drilled up to 75 feet deep, with the majority drilled approximately 45 feet deep, removing approximately an additional 500 cy of soil.

In addition to the planned excavations, a soil stockpile of approximately 250 cy in volume was generated on site from a utility trench excavation adjacent to Martin Luther King Jr. Way.

## **SCOPE OF SERVICES**

Ninyo & Moore's scope of services included project coordination, pre-field activities, in-situ and stockpile soil sample collection, laboratory analysis, and report preparation. A more detailed discussion of the tasks provided is below.

### **Project Coordination**

Ninyo & Moore performed the following project coordination tasks:

- Arranging the field activities with Turner;
- Preparing a site-specific health and safety plan;
- Obtaining a drilling permit from Alameda County Public Works Agency, Water Resources Division (ACPWA);
- Subcontracting a California C-57 licensed environmental driller (PeneCore Drilling) to advance the soil borings required to collect the in-situ soil characterization samples from the UST location and two representative pier locations for the clinic building;
- Subcontracting a private utility locator (Cruz Brothers Locators) to scan each boring location of the potential presence of subsurface utilities;
- Performing Underground Service Alert (USA) notification as required by California law;

- Coordinating with the California-certified analytical laboratory (TestAmerica Laboratories);
- Procuring the field sampling supplies;
- Conducting a site reconnaissance to mark out the sampling locations; and,
- Providing project management services.

### **Soil Sampling and Analysis**

Ninyo & Moore conducted the in-situ and stockpile soil sampling activities on November 18 and 19, 2015. Soil samples were collected following the California Department of Toxic Substances Control (DTSC) *Information Advisory Clean Imported Fill Material*, dated October 2001.

Shallow soil samples were collected using a hand auger, and deeper soil and groundwater samples were collected using a direct-push technology drill rig. All reusable sampling equipment was decontaminated between sampling locations using either a steam cleaner or a liquinox wash and distilled water rinse. Once samples were collected they were stored in a cooler on ice and transported via courier under chain of custody documentation to TestAmerica Laboratories, Inc. (TestAmerica) in Pleasanton, California. Sample locations are identified on Figures 2 and 3.

### ***Sampling Areas***

### **Service Yard**

The service yard's excavation is planned to extend no more than 2 feet below ground service (bgs), and therefore, in-situ soil samples were collected using a hand-auger. The DTSC's guidance requires one soil samples to characterize up to 250 cy of soil. Therefore, in order to collect the required in-situ soil characterization samples, this excavation area was divided into four quadrants, with one discrete soil sample collected from each quadrant at depths between 0 to 2 feet bgs.

The four discrete soil samples were composited by TestAmerica, with the four-point composite sample (SY-1-1, SY-2-1, SY-3-1, SY-4-2) analyzed for:

- organochlorine pesticides (OCPs) using United States Environmental Protection Agency (USEPA) Method 8081A;
- polychlorinated biphenyls (PCBs) using USEPA Method 8082;
- Total petroleum hydrocarbons as diesel (TPHd) and TPH as motor oil (TPHmo) using USEPA Method 8015B, with the samples prepared with silica-gel cleanup using USEPA Method 3630C;
- California Title 22 Metals using USEPA Method 6010B/7471A<sup>1</sup>; and
- Asbestos using CARB Method 435.

One discrete soil sample (sample number SY-1-1) was analyzed for volatile organic compounds (VOCs) and total petroleum hydrocarbons as gasoline (TPHg) using USEPA Method 8260B, and semi-volatile organic compounds (SVOCs) using USEPA Method 8270C.

### **UST Excavation**

The UST excavation will extend 16 feet bgs within the Service Yard. Soil samples were collected from borings B-3 and B-4 advanced within the footprint of this planned excavation at depths of 1, 7, 11 and 15 feet bgs from B-3, and at 1, 5, 10, and 15 feet bgs from B-4. A grab-groundwater sample was also collected from boring B-3, which was advanced a total of 22 feet bgs.

The soil samples were analyzed as follows:

- Two discrete soil samples, one from boring B-3 at 15 feet bgs (B-3-15) and one from boring B-4 at 1 foot bgs (B-4-1), were analyzed for VOCs and TPHg using USEPA Method 8260B, and SVOCs using USEPA Method 8270C. A discrete soil sample was collected from boring B-3 at 15 feet bgs because there was no evidence of impacts to shallower soils and a low permeability silt lens was observed at that depth. The 1 foot bgs soil sample from boring B-3 (B-3-1) was also analyzed for OCPs using USEPA Method 8081A, and PCBs using USEPA Method 8082.

---

<sup>1</sup> Metals include: antimony; arsenic; barium; beryllium; cadmium; chromium; cobalt; copper; lead; mercury; molybdenum; nickel; selenium; silver; thallium; vanadium; and zinc.

- The four discrete samples respectively collected from B-3 and B-4 were composited by TestAmerica, with the resulting two four-point composite samples (B-3-1,-7,-11,-15 and B-4-1,-5,-10,-15) analyzed for:
  - TPHd and TPHmo using USEPA Method 8015B, with samples prepared with silica-gel cleanup using USEPA Method 3630C;
  - California Title 22 Metals using USEPA Method 6010B/7471A; and
  - Asbestos using CARB Method 435.

The grab groundwater sample was analyzed for the following:

- VOCs using USEPA Method 8260B;
- TPHg, TPHd and TPHmo using USEPA Method 8015B, with the TPHd and TPHmo samples prepared with silica-gel cleanup using USEPA Method 3630C; and,
- California Title 22 Metals (dissolved) using USEPA Method 6010B/7471A.

### **Clinic Building**

The construction of the clinic building will generate two sources of soil, one from the building's foundation excavation and a second from the drilling of the building's piers. The clinic building's foundation excavation is planned to extend no more than 2 feet bgs, and therefore, in-situ soil samples were collected using a hand-auger. The DTSC's guidance requires four soil samples to characterize up to 1,000 cy of soil. Therefore, in order to collect the required in-situ soil characterization samples, the excavation area was divided into four quadrants, with each quadrant subsequently divided into four subquadrants. One discrete soil sample was collected from each subquadrant from depths between 0 and 2 feet bgs.

The foundation excavation soil samples were analyzed as follows:

- Four discrete soil samples, one per quadrant (S-1-A-2, S-2-A-2, S-3-A-2, and S-4-A-2), were analyzed for TPHg and VOCs using USEPA Method 8260B and SVOCs using USEPA Method 8270C.
- The four discrete soil samples collected from each quadrant were composited by TestAmeica, resulting in one four-point composite sample per quadrant (S-1-A-2, S-1-B-1, S-1-C-1, S-1-D-1; S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5; S-3-A-2, S-3-B-2, S-3-C-2, S-3-D-1; and S-4-A-2, S-4-B-1.5, S-4-C-1.5, S-4-D-1.5) analyzed for:

- OCPs using USEPA Method 8081A;
- PCBs using USEPA Method 8082;
- TPHd and TPHmo using USEPA Method 8015B, with the samples prepared with silica-gel cleanup using USEPA Method 3630C;
- California Title 22 Metals using USEPA Method 6010B/7471A; and
- Asbestos using CARB Method 435.

The construction of the clinic building will include the drilling of 83 piers, which requires the collection of deeper soil sample. The DTSC's guidance requires two samples to characterize up to 500 cy of soil. In order to provide Turner the in-situ soil characterization data required, one soil borings was (B-1) was advanced 20 feet bgs and a second (B-2) was advanced 26 feet bgs in representative pier locations. Four discrete soil samples were collected per boring, with one discrete soil sample collected representing each 5 vertical feet of boring. The discrete soil samples were collected from depths of 3, 7, 13 and 20 feet from B-1, and 3, 7, 15 and 18 feet from B-2. A grab groundwater sample was also collected from B-2, which was advanced a total of 26 feet bgs.

The soil samples were analyzed as follows:

- Two discrete soil samples, one from boring B-1 at 3 feet bgs (B-1-3) and one from boring B-2 at 15 foot bgs (B-2-15), were analyzed for VOCs and TPHg using USEPA Method 8260B, and SVOCs using USEPA Method 8270C. A discrete soil sample was collected from boring B-2 at 15 feet bgs because there was discoloration and a low permeability silt lens observed at that depth. Sample (B-1-3) was also analyzed for OCPs using USEPA Method 8081A, and PCBs using USEPA Method 8082.
- The four discrete samples collected from B-1 and B-2 were respectively composited by TestAmeica, with the resulting two four-point composite samples (B -1-3, -7,-13, -20 and B-2-3, -7, -15, -18) analyzed for:
  - TPHd and TPHmo using USEPA Method 8015B, with the samples prepared with silica-gel cleanup using USEPA Method 3630C;
  - California Title 22 Metals using USEPA Method 6010B/7471A; and
  - Asbestos using CARB Method 435.

The grab groundwater sample was analyzed for the following:

- VOCs using USEPA Method 8260B;
- TPHg, TPHd and TPHmo using USEPA Method 8015B, with the TPHd and TPHmo samples prepared with silica-gel cleanup using USEPA Method 3630C; and,
- California Title 22 Metals (dissolved) using USEPA Method 6010B/7471A.

### **Utility Trench**

The utility trench samples were collected from a stockpile generated from previously performed excavation activities. Because this stockpile was less than 250 cy, per the DTSC's guidance, it was characterized as follows:

- One discrete soil sample was analyzed for VOCs and TPHg using USEPA Method 8260B, and SVOCs using USEPA Method 8270C.
- Four discrete soil samples were collected from the stockpile and composited by TestAmerica, with the resulting four-point composite sample analyzed for:
  - OCPs using USEPA Method 8081A;
  - PCBs using USEPA Method 8082;
  - TPHd and TPHmo using USEPA Method 8015B, with the samples prepared with silica-gel cleanup using USEPA Method 3630C;
  - California Title 22 Metals using USEPA Method 6010B/7471A; and
  - Asbestos using CARB Method 435.

### **Additional Sample Analysis**

Additional arsenic and lead analysis was conducted on composite sample S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5 collected from the northeast quadrant in the Clinic Building area for waste characterization purposes. Further sampling and analysis for lead (sample numbers CSS-1 through CSS-3) was conducted on January 11<sup>th</sup>, 2016 within the same quadrant to determine the boundaries of hazardous waste reported in the area.

## **SOIL AND GROUNDWATER SAMPLE ANALYTICAL RESULTS**

The results of the collected soil and groundwater sampling were compared to: 1) soil - Soluble Threshold Limit Concentration (STLC), per the Official California Code of Regulations (CCR), Title 22, Division 4.5, Ch. 11, Characteristics of Hazardous Waste guidelines; and 2) groundwater - East Bay Municipal Utility District (EBMUD) Ordinance No. 311A-03, dated July 2010. Soil results were compared to the hazardous waste guidelines to evaluate waste characterization for disposal purposes, and groundwater results were compared to the EBMUD Ordinance (Ordinance) for wastewater discharge acceptance criteria to their sanitary sewer system. Soil and groundwater sample analytical data is tabulated in Tables 1 through 5, and copies of the certified laboratory analytical reports are attached to this report.

### ***Total Petroleum Hydrocarbons as Gasoline and Volatile Organic Compounds-Soil***

One of the 10 discrete samples, SY-1-1, contained TPHg and VOCs at concentrations greater than laboratory reporting limits (detected at 380 micrograms per kilogram,  $\mu\text{g}/\text{kg}$ , or parts per billion, ppb). The only VOC detected at concentrations greater than laboratory reporting limits was toluene (23  $\mu\text{g}/\text{kg}$  in B-4-1, and 81  $\mu\text{g}/\text{kg}$  in SY-1-1). Hazardous waste guidelines have not been established for either TPHg or toluene. TPHg and VOC soil sample analytical results are presented in Table 1.

### ***Total Petroleum Hydrocarbons as Gasoline and Volatile Organic Compounds-Groundwater***

Neither TPHg nor VOCs were detected at concentrations exceeding laboratory reporting limit in the groundwater sample collected from boring B-2, with the exception of toluene detected 4.3 micrograms per liter ( $\mu\text{g}/\text{L}$  or ppb). Several compounds were detected above the laboratory reporting limit from the groundwater sample collected from boring B-3 including: TPHg at 52  $\mu\text{g}/\text{L}$ , toluene at 3.8  $\mu\text{g}/\text{L}$ ; and tetrachloroethylene (PCE) at 44  $\mu\text{g}/\text{L}$ . The relevant Ordinance compounds used for comparison include total chlorinated hydrocarbons (for comparison to PCE); toluene does not have a wastewater limit established by the Ordinance. Neither of the Ordinance compounds were exceeded in the detected groundwater concentrations. TPHg and VOC groundwater sample analytical results are presented in Table 2.

### ***Total Petroleum Hydrocarbons as Diesel and Motor Oil-Soil***

TPHd was reported above laboratory reporting limits in composite samples S-1-A-2, S-1-B-1, S-1-C-1, S-1-D-1; S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5; S-3-A-2, S-3-B-2, S-3-C-2, S-3-D-1; S-4-A-2, S-4-B-1.5, S-4-C-1.5, S-4-D-1.5; SY-1-1, SY-2-1, SY-3-1, SY-4-2; B-2-3,-7,-15,-18; B-4-1,-5,-10,-15; and SP-1A,-1B,-1C,-1D ranging from 1.3 milligrams per kilogram (mg/kg, or parts per million, ppm) to 170 mg/kg. TPHmo was reported above laboratory reporting limits in composite samples S-1-A-2, S-1-B-1, S-1-C-1, S-1-D-1; S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5; S-4-A-2, S-4-B-1.5, S-4-C-1.5, S-4-D-1.5; SY-1-1, SY-2-1, SY-3-1, SY-4-2; B-4-1,-5,-10,-15; and SP-1A,-1B,-1C,-1D ranging from 85 mg/kg to 870 mg/kg. Hazardous waste guidelines have not been established for either TPHd or TPHmo. TPHd and TPHmo soil sample analytical results are presented in Table 1.

### ***Total Petroleum Hydrocarbons as Diesel and Motor Oil-Groundwater***

Neither TPHd nor TPHmo were detected at concentrations exceeding laboratory reporting limit in the groundwater sample collected from boring B-2. In contrast, TPHd was reported at 220 µg/L and TPHmo was reported at 930 µg/L in the sample collected from Boring B-3. The relevant Ordinance compounds used for comparison to TPHd and TPHmo are oil and grease, and neither the individual or combined concentrations of TPHd and TPHmo exceed the Ordinance value of 100,000 µg/L. TPHd and TPHmo groundwater sample analytical results are presented in Table 2.

### ***California Title 22 Metals-Soil***

Several California Title 22 Metals were reported above laboratory reporting limits in soil samples collected including arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, vanadium and zinc. California Title 22 Metal concentrations were compared to the hazardous waste guidelines. For offsite disposal/reuse considerations, analytical soil results are assessed to identify potential hazardous waste using the following two industry rule-of-thumbs:

- Comparing detected concentrations to 10-times the California Soluble Threshold Limit Concentration (STLC), with further analysis warranted using the California Waste Extraction Test (WET) should this screening limit be exceeded;<sup>2</sup> and
- Comparing the detected concentrations to 20-times the federal Toxicity Concentration Leaching Procedure (TCLP), with further analysis warranted using TCLP should this screening limit be exceeded.<sup>3</sup>

According to these rules-of-thumb, the detected lead concentrations exceeded potential hazardous waste screening limits in composite samples S-1-A-2, S-1-B-1, S-1-C-1, S-1-D-1; S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5; and S-4-A-2, S-4-B-1.5, S-4-C-1.5, S-4-D-1.5 from the Clinic Building area and SY-1-1, SY-2-1, SY-3-1, SY-4-2 from the Service and UST area. All four composite samples were further analyzed for CAWET lead, with sample SY-1-1, SY-2-1, SY-3-1, SY-4-2 additionally analyzed for TCLP lead. S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5 reported a CA WET lead concentration of 9.8 milligrams per liter (mg/L), which exceeds the lead STLC of 5 mg/L. Therefore, a request was made to TestAmerica to further analyze each of the four discrete soil samples collected within this (northeast) quadrant for CA WET lead. The results of this subsequent analysis reported only one of the discrete samples as containing soluble lead exceeding its STLC. Sample S-2-A-2, collected from the soil representing the northwest quarter of this quadrant, reported a CA WET lead concentration of 16 mg/L. Given the STLC exceedance, this discrete sample analyzed for TCLP lead to assess whether this soil would also be characterized as RCRA hazardous waste. The test result was not detected above the reporting limit of 0.5 mg/L, and was far below the TCLP threshold of 5 mg/L, so the waste is considered non-RCRA hazardous. To further define the limits of hazardous waste within the northwest sub-quadrant, three additional samples (CSS-1 through CSS-3) were collected within the north section of the northwest sub-quadrant and analyzed for lead. The analytical results ranged between 9.5 and 17 mg/kg.

---

<sup>2</sup> If a STLC is exceeded, the soil is to be profiled for offsite disposal as California hazardous waste.

<sup>3</sup> If a TCLP is exceeded, the soil is to be profiled for offsite disposal as Resource Conservation and Recovery Act (RCRA) hazardous waste.

In addition to the additional lead analysis, the four discrete samples from the northeast quadrant (S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5) were also analyzed for arsenic because of the elevated concentration in the composite sample (20 mg/kg). The four discrete sample results ranged between 6.0 and 6.9 mg/kg. California Title 22 Metal soil sample analytical results are presented in Table 3.

#### ***California Title 22 Metals-Groundwater***

Several California Title 22 Metals were detected at concentrations greater than laboratory reporting limits in the two grab groundwater samples collected, including barium, molybdenum and zinc in borings B-2 and B-3, and cobalt in boring B-2. None of the detected metal concentrations exceeded their respective EBMUD Ordinance wastewater limit. California Title 22 Metals groundwater sample analytical results are presented in Table 4.

#### ***Organochlorine Pesticides – Soil Only***

A few OCPs were detected at concentrations exceeding laboratory reporting limits, including: 4,4'-DDD; 4,4'-DDE; 4,4'-DDT; Dieldrin; alpha-Chlordane; gamma-Chlordane; Chlordane (technical); alpha-BHC; beta-DHC; Endosulfan I; and Endosulfan II. None of the detected OCP concentrations exceeded the two industry rules-of-thumb used to assess for potential hazardous waste. OCP soil sample analytical results are presented in Table 5.

#### ***Semi-Volatile Organic Compounds- Soil Only***

SVOCs were not detected at concentrations exceeding laboratory reporting limits in any samples collected.

#### ***Polychlorinated Biphenyls – Soil Only***

PCBs were not detected at concentrations exceeding laboratory reporting limits in any samples collected.

### ***Asbestos-Soil Only***

Asbestos was not detected at concentrations exceeding the CARB 435 practical quantitation limit in any of the samples collected.

## **CONCLUSIONS**

All but one of the 10 soil samples collected either did not contain chemical concentration exceeding laboratory reporting limits, or, if reporting limits were exceeded, then less than the industry rules-of-thumb relied upon to assess potential hazardous waste. The one exception is sample S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5 in the clinic area, which contained soluble lead at a concentration exceeding the STLC limit of 5 mg/L. The four discrete samples that made up the composite were further analyzed using CA WET to determine which portion of quadrant contributed to this exceedance. Only sample S-2-A-2, representing the northwest quarter of this quadrant exceeded the lead STLC. This sample was re-analyzed for the TCLP, and the results were non detect (below the reporting limit of 0.5 mg/L), classifying the waste as non-RCRA hazardous. The same discrete samples were analyzed for arsenic (due to an elevated arsenic concentration in the composite sample) and the resulting analysis indicated that all four samples were below the Regional Water Quality Control Board accepted Duverge<sup>4</sup> background concentration of 11 mg/kg.

To further define the limits of hazardous waste within the northwest sub-quadrant of quadrant S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5, three additional samples (CSS-1 through CSS-3) were collected within the north section of this sub-quadrant and analyzed for lead. The analytical results ranged between 9.5 and 17 mg/kg. Based on these results, the area originally designated as non-RCRA hazardous was reduced by half.

Based on the information discussed above, all soil to be excavated from the service yard and UST Area, utility trench soil stockpile area, and clinic building area, with the exception of the clinic building area's southern section of the northwest sub-quadrant to the northeast quadrant S-

---

<sup>4</sup> Duverge - Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region, dated December 2011.

2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5, can be transported offsite for reuse or disposal as non-hazardous waste. See Figure 4 for the recommended waste characterization boundaries.

All groundwater samples contained chemical concentrations either below the respective laboratory reporting limits, or if the reporting limits were exceeded, then below those relevant compounds' wastewater limits established in the EBMUD Ordinance guidelines for discharging to their sanitary sewer system. If Turner is planning on discharging site groundwater to the EBMUD sanitary sewer system during dewatering activities, an EBMUD Special Discharge Permit will need to be obtained prior to discharge activities commencing.

## LIMITATIONS

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities. Please also note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards.

Ninyo & Moore's opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited subsurface assessment and chemical analysis. Further assessment of potential adverse environmental impacts from past on-site and/or nearby use of hazardous materials may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated; however, conditions can vary significantly between sampling locations. Variations in soil and/or groundwater conditions will exist beyond the points explored in this evaluation.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

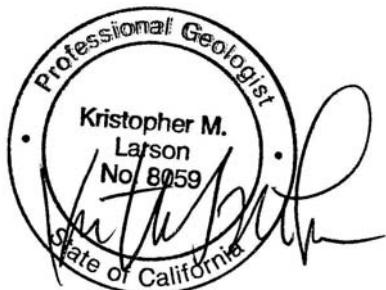

Our conclusions, recommendations, and opinions are based on an analysis of the observed site conditions. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

This report is intended exclusively for use by the client. Any use or reuse of the findings, conclusions, and/or recommendations of this report by parties other than the client is undertaken at said parties' sole risk.

Ninyo & Moore appreciates the opportunity to provide the Turner this Soil and Groundwater Sampling Letter Report. If you have additional questions or comments, please contact either of the undersigned at (510) 343-3000.

Sincerely,  
**NINYO & MOORE**

**Notes:**

<sup>a</sup>Duverge - Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region, dated December 2011 indicates that 11 mg/kg is the Regional Water Quality Control Board acceptable background concentration for arsenic in Bay Area soils

<sup>b</sup>STLC - Soluble Threshold Limit Concentration, Official California Code of Regulations (CCR), Title 22, Division 4.5, Ch. 11, Characteristics of Hazardous Waste, established in milligrams per liter

<sup>c</sup>TCLP - Toxicity Characteristic Leaching Procedure, Resource Conservation and Recovery Act (RCRA), established in milligrams per liter

<sup>d</sup>Waste extraction test (WET) and Toxicity Characteristic Leaching Procedure (TCLP) results reported in milligrams per liter

A **BOLD** concentration indicates exceedance of 10 times the STLC, or the STLC itself if compared to "Lead WET" result

An **UNDERLINED** concentrations indicates exceedance of 20 times the TCLP

Gray shading indicates the concentration is greater than the Duverge limit.

California Title 22 Metals analyzed using USEPA Method 6010B/7471A

mg/kg - milligrams per kilogram; analytical results reported on a dry-weigh basis

ND-X - not detected at a concentration greater than the laboratory reporting limit of X

NE - Not Established

--- Not analyzed

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature. The results contained in this report meet all requirements of NELAC and pertain only to those samples which were submitted for analysis. This report may be reproduced only in its entirety.

**CASE NARRATIVE**

Laboratory number: **273030**  
Client: **Ninyo & Moore**  
Project: **402654001**  
Location: **UCSF Benioff**  
Request Date: **01/11/16**  
Samples Received: **01/11/16**

This data package contains sample and QC results for three soil samples, requested for the above referenced project on 01/11/16. The samples were received on ice and intact, directly from the field.

**Metals (EPA 6010B):**

No analytical problems were encountered.

## COOLER RECEIPT CHECKLIST

Login # 273030 Date Received 01/11/16 Number of coolers 0  
 Client Ninfa Y Moore Project UCSF Benioff

Date Opened 01/11 By (print) SL (sign) JL  
 Date Logged in ↓ By (print) ↓ (sign) ↓

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES  NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES NO  N/A

3. Were custody papers dry and intact when received?  YES NO

4. Were custody papers filled out properly (ink, signed, etc)?  YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form)  YES NO

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) 10.6

Temperature blank(s) included?  Thermometer# \_\_\_\_\_  IR Gun# A

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES  NO

If YES, what time were they transferred to freezer?

9. Did all bottles arrive unbroken/unopened?  YES NO

10. Are there any missing / extra samples?  YES NO

11. Are samples in the appropriate containers for indicated tests?  YES NO

12. Are sample labels present, in good condition and complete?  YES NO

13. Do the sample labels agree with custody papers?  YES NO

14. Was sufficient amount of sample sent for tests requested?  YES NO

15. Are the samples appropriately preserved?  YES NO  N/A

16. Did you check preservatives for all bottles for each sample?  YES NO  N/A

17. Did you document your preservative check? (pH strip lot# \_\_\_\_\_) YES NO  N/A

18. Did you change the hold time in LIMS for unpreserved VOAs?  YES NO  N/A

19. Did you change the hold time in LIMS for preserved terracores?  YES NO  N/A

20. Are bubbles > 6mm absent in VOA samples?  YES NO  N/A

21. Was the client contacted concerning this sample delivery? YES  NO

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

## Qualifiers

### GC/MS VOA

| Qualifier | Qualifier Description                                     |
|-----------|---|
| *         | ISTD response or retention time outside acceptable limits |
| *         | LCS or LCSD is outside acceptance limits.                 |

### GC/MS Semi VOA

| Qualifier | Qualifier Description   |
|-----------|---|
| *         | LCS or LCSD is outside acceptance limits.   |
| D         | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| X         | Surrogate is outside control limits   |

### GC Semi VOA

| Qualifier | Qualifier Description   |
|-----------|---|
| D         | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| X         | Surrogate is outside control limits   |

## Glossary

### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

|                |   |
|----------------|---|
| □              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery  |
| CFL            | Contains Free Liquid  |
| CNF            | Contains no Free Liquid   |
| DER            | Duplicate error ratio (normalized absolute difference)  |
| Dil Fac        | Dilution Factor   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision level concentration  |
| MDA            | Minimum detectable activity   |
| EDL            | Estimated Detection Limit   |
| MDC            | Minimum detectable concentration  |
| MDL            | Method Detection Limit  |
| ML             | Minimum Level (Dioxin)  |
| NC             | Not Calculated  |
| ND             | Not detected at the reporting limit (or MDL or EDL if shown)  |
| PQL            | Practical Quantitation Limit  |
| QC             | Quality Control   |
| RER            | Relative error ratio  |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)   |

# Case Narrative

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68723-1

## Job ID: 720-68723-1

### Laboratory: TestAmerica Pleasanton

#### Narrative

#### Job Narrative 720-68723-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 11/18/2015 3:50 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.5° C and 1.8° C.

#### Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. Samples B-2-GW and B-3-GW received unpreserved poly 250ml for CAM 17 Metals. The Metals bottles sample labels note: "Lab Filter. Dissolved Metals or lab to filter is not listed on the COC.

On the B-4 samples the coc is marked for discreet Cam 17 and Cam 17 on the composite. Per phone conversation with client logged the discreet sample for Cam 17 until confirmation.

#### GC/MS VOA

Method 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 720-193083 recovered outside control limits for the following analytes: Dichlorodifluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260B: The Gasoline Range Organics (GRO) concentration reported for the following sample is due to the presence of discrete peaks: B-3-GW (720-68723-7). Tetrachloroethene

Method 8260B: Internal standard (ISTD) response for the following sample was outside control limits: B-4-1 (720-68723-18). The sample was re-analyzed with concurring results, and the data from re-analysis has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8270C: The following sample required a dilution due to the nature of the sample matrix: B-4-1 (720-68723-18). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270C: The following analyte recovered outside control limits for the LCS associated with preparation batch 720-193042 and analytical batch 720-193156: 1,3-Dichlorobenzene and Hexachloroethane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC Semi VOA

Method 8015B: The following sample required a dilution due to the nature of the sample matrix: B-4-1,-5,-10,-15 (720-68723-22). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

Method 3005A/7470A: The following samples requested dissolved metals and were not filtered in the field: B-2-GW (720-68723-6),

## Case Narrative

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68723-1

### Job ID: 720-68723-1 (Continued)

#### Laboratory: TestAmerica Pleasanton (Continued)

B-3-GW (720-68723-7), (720-68723-F-6-A MS) and (720-68723-F-6-A MSD). These samples were filtered and preserved upon receipt to the laboratory; ref #: 192933

Method 6010B: The following samples was diluted due to the abundance of non-target analyte: B-1-3,-7,-13,-20 (720-68723-5), B-2-3,-7,-15,-18 (720-68723-12) and B-4-1,-5,-10,-15 (720-68723-22). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

Method 3546: The following samples could not be thoroughly homogenized before sub-sampling was performed due to sample matrix: B-1-13 (720-68723-3), B-3-15 (720-68723-16) and B-4-1,-5,-10,-15 (720-68723-22). The samples were clay.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RE: LABORATORY JOB # 1283-00564  
Polarized light microscopy analytical results for 4 bulk sample(s).  
Job Site: 720-68723-1  
Job No.: Turner/UCSF Benioff

Enclosed please find the bulk material analytical results for one or more samples submitted for asbestos analysis. The analyses were performed in accordance with the California Air Resources Board (ARB) Method 435 for the determination of asbestos in serpentine aggregate samples.

Prior to analysis, samples are logged-in and all data pertinent to the sample recorded. The samples are checked for damage or disruption of any chain-of-custody seals. A unique laboratory ID number is assigned to each sample. A hard copy log-in sheet containing all pertinent information concerning the sample is generated. This and all other relevant paper work are kept with the sample throughout the analytical procedures to assure proper analysis.

Sample preparation follows a standard CARB 435 prep method. The entire sample is dried at 135-150 C and then crushed to ~3/8" gravel size using a Bico Chipmunk crusher. If the submitted sample is >1 pint, the sample was split using a 1/2" riffle splitter following ASTM Method C-702-98 to obtain a 1 pint aliquot. The entire 1 pint aliquot, or entire original sample, is then pulverized in a Bico Braun disc pulverizer calibrated to produce a nominal 200 mesh final product. If necessary, additional homogenization steps are undertaken using a 3/8" riffle splitter. Small aliquots are collected from throughout the pulverized material to create three separate microscope slide mounts containing the appropriate refractive index oil. The prepared slides are placed under a polarizing light microscope where standard mineralogical techniques are used to analyze the various materials present, including asbestos. If asbestos is identified and of less than 10% concentration by visual area estimate then an additional five sample mounts are prepared. Quantification of asbestos concentration is obtained using the standard CAL ARB Method 435 point count protocol. For samples observed to contain visible asbestos of less than 10% concentration, a point counting technique is used with 50 points counted on each of eight sample mounts for a total of 400 points. The data is then compiled into standard report format and subjected to a thorough quality assurance check before the information is released to the client.

While the CARB 435 method has much to commend it, there are a number of situations where it fails to provide sufficient accuracy to make a definitive determination of the presence/absence of asbestos and/or an accurate count of the asbestos concentration present in a given sample. These problems include, but are not limited to, 1) statistical uncertainty with samples containing <1% asbestos when too few particles are counted, 2) definitive identification and discrimination between various fibrous amphibole minerals such as tremolite/actinolite/hornblende and the "Libby amphiboles" such as tremolite/winchite/richterite/arfvedsonite, and C) small asbestiform fibers which are near or below the resolution limit of the PLM microscope such as those found in various California coast range serpentine bodies. In these cases, further analysis by transmission electron microscopy is recommended to obtain a more accurate result.

Sincerely Yours,

Lab Manager

## Sharma, Dimple

**From:** Forrest McFarland <fmcfarland@ninyoandmoore.com>  
**Sent:** Thursday, November 19, 2015 4:28 PM  
**To:** Sharma, Dimple  
**Subject:** RE: COC UCSF

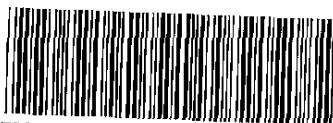

Thanks for this Dimple,

Yes, I'm happy you've caught this. The sample B-4-1 is the discrete sample for this group and it should be run for VOCs by 8260 and SVOCs by 8270, and should NOT be run for CA Title 22 metals. Please make these changes as indicated.  
Please let me know if you have any other questions, and thanks again!

Forrest

**Subject:** RE: COC UCSF

Hi Forrest,

Please see attached coc and please can you confirm the discreet analysis on page 3 of the coc.

Thanks.

*As we approach the upcoming Thanksgiving Holiday observed on Thursday, November 26<sup>th</sup>, we want you to know that FedEx and UPS will not have scheduled service on this day so please plan accordingly. Despite this logistic challenge please let us know how we can extend solutions to best support your analytical needs over this holiday period. Please note that if you have BODs that will be sampled on November 19th, 20th, 24th or 25th , or have short hold samples that will arrive on November 27th or 28th we ask that you communicate and make any necessary confirmed arrangements with your Project Manager in advance to ensure your samples meet all holding time criteria.*

*We are thankful for your business and hope that you have a wonderful and safe holiday.*

Dimple Sharma

Senior Project Manager

## Narrative

### Job Narrative 720-68723-2

## Comments

No additional comments.

## Receipt

The samples were received on 11/18/2015 3:50 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.5° C and 1.8° C.

## Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Definitions/Glossary

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68750-1

## Qualifiers

### GC Semi VOA

| Qualifier | Qualifier Description   |
|-----------|---|
| D         | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| X         | Surrogate is outside control limits   |

## Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|---|
| □              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery  |
| CFL            | Contains Free Liquid  |
| CNF            | Contains no Free Liquid   |
| DER            | Duplicate error ratio (normalized absolute difference)  |
| Dil Fac        | Dilution Factor   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision level concentration  |
| MDA            | Minimum detectable activity   |
| EDL            | Estimated Detection Limit   |
| MDC            | Minimum detectable concentration  |
| MDL            | Method Detection Limit  |
| ML             | Minimum Level (Dioxin)  |
| NC             | Not Calculated  |
| ND             | Not detected at the reporting limit (or MDL or EDL if shown)  |
| PQL            | Practical Quantitation Limit  |
| QC             | Quality Control   |
| RER            | Relative error ratio  |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)   |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)   |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)   |

No additional comments.

### Receipt

The samples were received on 11/19/2015 4:51 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

### GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### GC/MS Semi VOA

Method 8270C: The following samples was diluted due to color: SP-1D (720-68750-4). Elevated reporting limits (RL) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### GC Semi VOA

Method 8015B: The following sample required a dilution due to the nature of the sample matrix: SP-1A,-1B,-1C,-1D (720-68750-5). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8082: The following sample required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: SP-1A,-1B,-1C,-1D (720-68750-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

Client: Ninyo & Moore  
 Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68750-1

**Client Sample ID: SP-1D**

**Lab Sample ID: 720-68750-4**

No Detections.

**Client Sample ID: SP-1A,-1B,-1C,-1D**

**Lab Sample ID: 720-68750-5**

| Analyte                            | Result | Qualifier | RL     | MDL | Unit  | Dil Fac | D | Method | Prep Type  |
|------------------------------------|--------|-----------|--------|-----|-------|---------|---|--------|------------|

# QC Sample Results

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68750-1

## **Method: 8270C - Semivolatile Compounds by Gas Chromatography/Mass Spectrometry (GC/MS) (Continued)**

**Lab Sample ID: MB 720-193152/1-A**

**Matrix: Solid**

**Analysis Batch: 193205**

**Client Sample ID: Method Blank**

**Prep Type: Total/NA**

**Prep Batch: 193152**

RE: LABORATORY JOB # 1283-00569  
Polarized light microscopy analytical results for 1 bulk sample(s).  
Job Site: 720-68750-1  
Job No.: Turner/UCSF Benioff

Enclosed please find the bulk material analytical results for one or more samples submitted for asbestos analysis. The analyses were performed in accordance with the California Air Resources Board (ARB) Method 435 for the determination of asbestos in serpentine aggregate samples.

Prior to analysis, samples are logged-in and all data pertinent to the sample recorded. The samples are checked for damage or disruption of any chain-of-custody seals. A unique laboratory ID number is assigned to each sample. A hard copy log-in sheet containing all pertinent information concerning the sample is generated. This and all other relevant paper work are kept with the sample throughout the analytical procedures to assure proper analysis.

Sample preparation follows a standard CARB 435 prep method. The entire sample is dried at 135-150 C and then crushed to ~3/8" gravel size using a Bico Chipmunk crusher. If the submitted sample is >1 pint, the sample was split using a 1/2" riffle splitter following ASTM Method C-702-98 to obtain a 1 pint aliquot. The entire 1 pint aliquot, or entire original sample, is then pulverized in a Bico Braun disc pulverizer calibrated to produce a nominal 200 mesh final product. If necessary, additional homogenization steps are undertaken using a 3/8" riffle splitter. Small aliquots are collected from throughout the pulverized material to create three separate microscope slide mounts containing the appropriate refractive index oil. The prepared slides are placed under a polarizing light microscope where standard mineralogical techniques are used to analyze the various materials present, including asbestos. If asbestos is identified and of less than 10% concentration by visual area estimate then an additional five sample mounts are prepared. Quantification of asbestos concentration is obtained using the standard CAL ARB Method 435 point count protocol. For samples observed to contain visible asbestos of less than 10% concentration, a point counting technique is used with 50 points counted on each of eight sample mounts for a total of 400 points. The data is then compiled into standard report format and subjected to a thorough quality assurance check before the information is released to the client.

While the CARB 435 method has much to commend it, there are a number of situations where it fails to provide sufficient accuracy to make a definitive determination of the presence/absence of asbestos and/or an accurate count of the asbestos concentration present in a given sample. These problems include, but are not limited to, 1) statistical uncertainty with samples containing <1% asbestos when too few particles are counted, 2) definitive identification and discrimination between various fibrous amphibole minerals such as tremolite/actinolite/hornblende and the "Libby amphiboles" such as tremolite/winchite/richterite/arfvedsonite, and C) small asbestiform fibers which are near or below the resolution limit of the PLM microscope such as those found in various California coast range serpentine bodies. In these cases, further analysis by transmission electron microscopy is recommended to obtain a more accurate result.

Sincerely Yours,

Lab Manager

ASBESTOS TEM LABORATORIES, INC.

720-68750 Chain of Custody

Report:  Routine  Level 3  Level 4  EDD  EDF  
Special Instructions / Comments:  Global ID \_\_\_\_\_

**Sharma, Dimple**

---

**From:** Jason Grant <jgrant@ninyoandmoore.com>  
**Sent:** Friday, November 20, 2015 8:56 AM  
**To:** Sharma, Dimple  
**Subject:** UCSF Benioff Soil Samples

**Importance:** High

Hi Dimple,

We do not need soil samples SP1-A, SP1-B, SP1-C and SP1-D analyzed under 24-hr TAT. Rather, these samples are to be analyzed under normal TAT.

Thanks,

Jason

| Question   | Answer | Comment |
|--|--------|---------|
| Radioactivity wasn't checked or is </= background as measured by a survey meter. | N/A    |         |
| The cooler's custody seal, if present, is intact.                                | N/A    |         |
| Sample custody seals, if present, are intact.                                    | N/A    |         |
| The cooler or samples do not appear to have been compromised or tampered with.   | True   |         |
| Samples were received on ice.  | True   |         |
| Cooler Temperature is acceptable.  | True   |         |
| Cooler Temperature is recorded.  | True   |         |
| COC is present.  | True   |         |
| COC is filled out in ink and legible.  | True   |         |
| COC is filled out with all pertinent information.                                | False  |         |
| Is the Field Sampler's name present on COC?                                      | True   |         |
| There are no discrepancies between the containers received and the COC.          | True   |         |
| Samples are received within Holding Time.  | True   |         |
| Sample containers have legible labels.   | True   |         |
| Containers are not broken or leaking.  | True   |         |
| Sample collection date/times are provided.                                       | True   |         |
| Appropriate sample containers are used.  | True   |         |
| Sample bottles are completely filled.  | True   |         |
| Sample Preservation Verified.  | N/A    |         |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True   |         |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").  | True   |         |
| Multiphasic samples are not present.   | True   |         |
| Samples do not require splitting or compositing.                                 | True   |         |
| Residual Chlorine Checked.   | N/A    |         |

TestAmerica Job ID: 720-68752-1

## Qualifiers

### GC Semi VOA

| Qualifier | Qualifier Description   |
|-----------|---|
| F1        | MS and/or MSD Recovery is outside acceptance limits.  |
| p         | The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported. |

## Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|---|
| □              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery  |
| CFL            | Contains Free Liquid  |
| CNF            | Contains no Free Liquid   |
| DER            | Duplicate error ratio (normalized absolute difference)  |
| Dil Fac        | Dilution Factor   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision level concentration  |
| MDA            | Minimum detectable activity   |
| EDL            | Estimated Detection Limit   |
| MDC            | Minimum detectable concentration  |
| MDL            | Method Detection Limit  |
| ML             | Minimum Level (Dioxin)  |
| NC             | Not Calculated  |
| ND             | Not detected at the reporting limit (or MDL or EDL if shown)  |
| PQL            | Practical Quantitation Limit  |
| QC             | Quality Control   |
| RER            | Relative error ratio  |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)   |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)   |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)   |

# Case Narrative

TestAmerica Job ID: 720-68752-1

## Job ID: 720-68752-1

### Laboratory: TestAmerica Pleasanton

#### Narrative

#### Job Narrative 720-68752-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 11/19/2015 4:51 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

#### Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. TPH-Gas requested on composite Group S-2 but VOC's was not requested on \* S-2-A-2 like all other groups. Logged VOC+ TPH-Gas on \* S-2-A-2.

1.) The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): S-1-B-1 The container labels list S-1-C-1, while the COC lists S-1-B-1. Received two jars with the same sample ID: S-1-C-1, the time on one is difficult to read on the label, labeled that one as S-1-B-1.

The other jar the sample time is 13:25 and matches the COC sample time, labeled as S-1-C-1.

2.) The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): S-4-C-1.5 The container labels list S-4-C-2, while the COC lists S-4-C-1.5.

#### GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8270C: The following samples was diluted due to color: S-1-A-2 (720-68752-1) and SY-1-1 (720-68752-21). Elevated reporting limits (RL) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC Semi VOA

Method 8081A: The %RPD between the primary and confirmation column / detector exceeded 40% for alpha-Chlordane and gamma-Chlordane for the following samples: S-1-A-2, S-1-B-1, S-1-C-1, S-1-D-1 (720-68752-5). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8081A: The %RPD between the primary and confirmation column / detector exceeded 40% for 4,4'-DDD. Chlordane (technical), alpha-Chlordane and gamma-Chlordane for the following samples: SY-1-1, SY-2-1. SY-3-1, SY-4-2 (720-68752-25). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8082: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: S-1-A-2, S-1-B-1, S-1-C-1, S-1-D-1 (720-68752-5), S-2-A-2, S-2-B-1, S-2-C-2, S-2-D-1.5 (720-68752-10), S-4-A-2, S-4-B-1.5, S-4-C-1.5, S-4-D-1.5 (720-68752-20) and SY-1-1, SY-2-1. SY-3-1, SY-4-2 (720-68752-25).

Method 8082: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: S-3-A-2, S-3-B-2, S-3-C-2, S-3-D-1 (720-68752-15), (LCS 720-193128/2-A), (MB 720-193128/1-A), (720-68752-A-15-J MS) and (720-68752-A-15-K MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RE: LABORATORY JOB # 1283-00568  
Polarized light microscopy analytical results for 5 bulk sample(s).  
Job Site: 720-68752-1  
Job No.: Turner/UCSF Benioff

Enclosed please find the bulk material analytical results for one or more samples submitted for asbestos analysis. The analyses were performed in accordance with the California Air Resources Board (ARB) Method 435 for the determination of asbestos in serpentine aggregate samples.

Prior to analysis, samples are logged-in and all data pertinent to the sample recorded. The samples are checked for damage or disruption of any chain-of-custody seals. A unique laboratory ID number is assigned to each sample. A hard copy log-in sheet containing all pertinent information concerning the sample is generated. This and all other relevant paper work are kept with the sample throughout the analytical procedures to assure proper analysis.

Sample preparation follows a standard CARB 435 prep method. The entire sample is dried at 135-150 C and then crushed to ~3/8" gravel size using a Bico Chipmunk crusher. If the submitted sample is >1 pint, the sample was split using a 1/2" riffle splitter following ASTM Method C-702-98 to obtain a 1 pint aliquot. The entire 1 pint aliquot, or entire original sample, is then pulverized in a Bico Braun disc pulverizer calibrated to produce a nominal 200 mesh final product. If necessary, additional homogenization steps are undertaken using a 3/8" riffle splitter. Small aliquots are collected from throughout the pulverized material to create three separate microscope slide mounts containing the appropriate refractive index oil. The prepared slides are placed under a polarizing light microscope where standard mineralogical techniques are used to analyze the various materials present, including asbestos. If asbestos is identified and of less than 10% concentration by visual area estimate then an additional five sample mounts are prepared. Quantification of asbestos concentration is obtained using the standard CAL ARB Method 435 point count protocol. For samples observed to contain visible asbestos of less than 10% concentration, a point counting technique is used with 50 points counted on each of eight sample mounts for a total of 400 points. The data is then compiled into standard report format and subjected to a thorough quality assurance check before the information is released to the client.

While the CARB 435 method has much to commend it, there are a number of situations where it fails to provide sufficient accuracy to make a definitive determination of the presence/absence of asbestos and/or an accurate count of the asbestos concentration present in a given sample. These problems include, but are not limited to, 1) statistical uncertainty with samples containing <1% asbestos when too few particles are counted, 2) definitive identification and discrimination between various fibrous amphibole minerals such as tremolite/actinolite/hornblende and the "Libby amphiboles" such as tremolite/winchite/richterite/arfvedsonite, and C) small asbestiform fibers which are near or below the resolution limit of the PLM microscope such as those found in various California coast range serpentine bodies. In these cases, further analysis by transmission electron microscopy is recommended to obtain a more accurate result.

Sincerely Yours,

Lab Manager

Sharma, Dimple

720-68752

**From:** Forrest McFarland <fmcfarland@ninyoandmoore.com>  
**Sent:** Friday, November 20, 2015 1:22 PM  
**To:** Sharma, Dimple  
**Subject:** RE: TestAmerica Sample Login Confirmation files from 720-68752 Turner/UCSF Benioff

Dimple-

Regarding sample S-2-A-2, yes, please run for VOCs by 8260B and SVOCs by 8270C as with the other discrete samples.

- 1) The sample with the time 1325 should be S-1-C-1. The sample with time 1335 should be S-1-B-1. Both samples are to be composited together with S-1-A-2 and S-1-D-1. I apologize for my poor handwriting. My tremor does seem to affect my handwriting when I am in a hurry.
- 2) S-4-C-1.5 is the correct sample name. S-4-C-2 does not exist.

And Dimple, on future bottle orders, we will need to have coolers for soil samples and not just one small cooler for the two groundwater samples.

Please return the two Acutest coolers I sent you on Wednesday to their office in Milpitas.

The red cooler I shipped you yesterday is my personal cooler. You do not need to return that one, as I will not be using it any longer.

Thanks,  
Forrest

**To:** Forrest McFarland; Jason Grant  
**Subject:** TestAmerica Sample Login Confirmation files from 720-68752 Turner/UCSF Benioff

Hello,

Attached, please find the Sample Confirmation files for job 720-68752; Turner/UCSF Benioff.  
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. TPH-Gas requested on composite Group S-2 but VOC's was not requested on \* S-2-A-2 like all other groups. Logged VOC+TPH-Gas on \* S-2-

A-2.

1.) The container label for the following sample(s) did not match the information listed on the Chain-of-Custody (COC): S-1-B-1 The container labels list S-1-C-1, while the COC lists S-1-B-1. Received two jars with the same sample ID: S-1-C-1, the time on one is difficult to read on the label, labeled that one as S-1-B-1.

The other jar the sample time is 13:25 and matches the COC sample time, labeled as S-1-C-1.

2.) The container label for the following sample(s) did not match the information listed on the Chain-of-Custody (COC): S-4-C-1:5 The container labels list S-4-C-2, while the COC lists S-4-C-1:5.

Please feel free to contact me if you have any questions.

Thank you.

## Job ID: 720-68752-2

### Laboratory: TestAmerica Pleasanton

#### Narrative

#### Job Narrative 720-68752-2

#### Comments

No additional comments.

#### Receipt

The samples were received on 11/19/2015 4:51 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

TestAmerica Pleasanton

Sharma, Dimple

720-68752-2

**From:** Jason Grant <jgrant@ninyoandmoore.com>  
**Sent:** Monday, November 30, 2015 4:29 PM  
**To:** Sharma, Dimple  
**Cc:** Forrest McFarland  
**Subject:** RE: TestAmerica EDD and report files from 720-68752-1 Turner/UCSF Benioff

Hi Dimple,

Can you please have the following four samples analyzed for lead WET:

- S-1-A-2, S-1-B-1, S-1-C-1, S-1-D-1
- S-2-A-2, S-2-B-1, S-2-C-2, S-2-C-2, S-2-D-1.5
- S-4-A-2, S-4-B-1.5, S-4-C-1.5, S-4-D-1.5
- SY-1-1, SY-2-1, SY-3-1, SY-4-2

Also, I need sample SY-1-1, SY-2-1, SY-3-1, SY-4-2 analyzed for lead TCLP.

Thanks,

Jason

# Definitions/Glossary

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68752-3

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

|                |   |
|----------------|---|
| □              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery  |
| CFL            | Contains Free Liquid  |
| CNF            | Contains no Free Liquid   |
| DER            | Duplicate error ratio (normalized absolute difference)  |
| Dil Fac        | Dilution Factor   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision level concentration  |
| MDA            | Minimum detectable activity   |
| EDL            | Estimated Detection Limit   |
| MDC            | Minimum detectable concentration  |
| MDL            | Method Detection Limit  |
| ML             | Minimum Level (Dioxin)  |
| NC             | Not Calculated  |
| ND             | Not detected at the reporting limit (or MDL or EDL if shown)  |
| PQL            | Practical Quantitation Limit  |
| QC             | Quality Control   |
| RER            | Relative error ratio  |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)   |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)   |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)   |

# Case Narrative

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68752-3

## Job ID: 720-68752-3

Laboratory: TestAmerica Pleasanton

### Narrative

#### Job Narrative 720-68752-3

### Comments

No additional comments.

### Receipt

The samples were received on 11/19/2015 4:51 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Detection Summary

Client: Ninyo & Moore

**From:** Kris Larson <klarson@ninyoandmoore.com>  
**Sent:** Tuesday, December 08, 2015 11:18 AM  
**To:** Sharma, Dimple  
**Cc:** Jason Grant  
**Subject:** Lab Sample ID 720-68752-10  
**Attachments:** J68752-2 UDS Level 2 Report Final Report.pdf; 720-68752-2\_Std\_Tal.csv

Dimple,

Please analyze the discrete samples that were composited into lab ID 720-68752-10 for the lead WET. They include discrete samples S-2-A-2, S-2-B-1, S-D-C-2, and S-2-D-1.5. Please analyze these on a normal TAT.

Thanks,

Kris M. Larson, P.G., QSD

| Question   | Answer | Comment |
|--|--------|---------|
| Radioactivity wasn't checked or is </= background as measured by a survey meter. | N/A    |         |
| The cooler's custody seal, if present, is intact.                                | N/A    |         |
| Sample custody seals, if present, are intact.                                    | N/A    |         |
| The cooler or samples do not appear to have been compromised or tampered with.   | True   |         |
| Samples were received on ice.  | True   |         |
| Cooler Temperature is acceptable.  | True   |         |
| Cooler Temperature is recorded.  | True   |         |
| COC is present.  | True   |         |
| COC is filled out in ink and legible.  | True   |         |
| COC is filled out with all pertinent information.                                | False  |         |
| Is the Field Sampler's name present on COC?                                      | True   |         |
| There are no discrepancies between the containers received and the COC.          | False  |         |
| Samples are received within Holding Time.  | True   |         |
| Sample containers have legible labels.   | True   |         |
| Containers are not broken or leaking.  | True   |         |
| Sample collection date/times are provided.                                       | True   |         |
| Appropriate sample containers are used.  | True   |         |
| Sample bottles are completely filled.  | True   |         |
| Sample Preservation Verified.  | N/A    |         |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True   |         |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").  | True   |         |
| Multiphasic samples are not present.   | True   |         |
| Samples do not require splitting or compositing.                                 | True   |         |
| Residual Chlorine Checked.   | N/A    |         |

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

|                |   |
|----------------|---|
| □              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery  |
| CFL            | Contains Free Liquid  |
| CNF            | Contains no Free Liquid   |
| DER            | Duplicate error ratio (normalized absolute difference)  |
| Dil Fac        | Dilution Factor   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision level concentration  |
| MDA            | Minimum detectable activity   |
| EDL            | Estimated Detection Limit   |
| MDC            | Minimum detectable concentration  |
| MDL            | Method Detection Limit  |
| ML             | Minimum Level (Dioxin)  |
| NC             | Not Calculated  |
| ND             | Not detected at the reporting limit (or MDL or EDL if shown)  |
| PQL            | Practical Quantitation Limit  |
| QC             | Quality Control   |
| RER            | Relative error ratio  |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)   |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)   |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)   |

# Case Narrative

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68752-4

## Job ID: 720-68752-4

### Laboratory: TestAmerica Pleasanton

#### Narrative

#### Job Narrative 720-68752-4

#### Comments

No additional comments.

#### Receipt

The samples were received on 11/19/2015 4:51 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Detection Summary

Client: Ninyo & Moore

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

|                |   |
|----------------|---|
| □              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery  |
| CFL            | Contains Free Liquid  |
| CNF            | Contains no Free Liquid   |
| DER            | Duplicate error ratio (normalized absolute difference)  |
| Dil Fac        | Dilution Factor   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision level concentration  |
| MDA            | Minimum detectable activity   |
| EDL            | Estimated Detection Limit   |
| MDC            | Minimum detectable concentration  |
| MDL            | Method Detection Limit  |
| ML             | Minimum Level (Dioxin)  |
| NC             | Not Calculated  |
| ND             | Not detected at the reporting limit (or MDL or EDL if shown)  |
| PQL            | Practical Quantitation Limit  |
| QC             | Quality Control   |
| RER            | Relative error ratio  |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)   |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)   |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)   |

# Case Narrative

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68752-5

## Job ID: 720-68752-5

### Laboratory: TestAmerica Pleasanton

#### Narrative

#### Job Narrative 720-68752-5

#### Comments

No additional comments.

#### Receipt

The samples were received on 11/19/2015 4:51 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.4° C.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Detection Summary

Client: Ninyo & Moore  
Project/Site: Turner/UCSF Benioff

TestAmerica Job ID: 720-68752-5

**Client Sample ID: S-2-A-2,**

**Lab Sample ID: 720-68752-6**

| Analyte | Result | Qualifier | RL  | MDL | Unit  | Dil Fac | D | Method | Prep Type |
|---------|--------|-----------|-----|-----|-------|---------|---|--------|-----------|
| Arsenic | 6.4    |           | 1.9 |     | mg/Kg | 1       |   | 6010B  | Total/NA  |

**Client Sample ID: S-2-B-1,**

**Lab Sample ID: 720-68752-7**

| Analyte | Result | Qualifier | RL  | MDL | Unit  | Dil Fac | D | Method | Prep Type |
|---------|--------|-----------|-----|-----|-------|---------|---|--------|-----------|
| Arsenic | 6.9    |           | 2.0 |     | mg/Kg | 1       |   | 6010B  | Total/NA  |

**Client Sample ID: S-2-C-2,**

**Lab Sample ID: 720-68752-8**

| Analyte | Result | Qualifier | RL  | MDL | Unit  | Dil Fac | D | Method | Prep Type |
|---------|--------|-----------|-----|-----|-------|---------|---|--------|-----------|
| Arsenic | 6.0    |           | 2.0 |     | mg/Kg | 1       |   | 6010B  | Total/NA  |

**Client Sample ID: S-2-D-1.5**

**Lab Sample ID: 720-68752-9**

| Analyte | Result | Qualifier | RL  | MDL | Unit  | Dil Fac | D | Method | Prep Type |
|---------|--------|-----------|-----|-----|-------|---------|---|--------|-----------|
| Arsenic | 6.9    |           | 1.9 |     | mg/Kg | 1       |   | 6010B  | Total/NA  |

This Detection Summary does not include radiochemical test results.

TestAmerica Pleasanton

Sharma, Dimple

720-68752-5

**From:** Kris Larson <klarson@ninyoandmoore.com>  
**Sent:** Friday, January 08, 2016 1:26 PM  
**To:** Sharma, Dimple  
**Cc:** Jason Grant  
**Subject:** Separating samples for arsenic analysis for Lab ID No. 720-68752  
**Attachments:** image001.png; image002.png; image003.png

Dimple,

Please breakout the four composite samples from Lab ID 720-68752-10 and run each individual sample for arsenic on a rush TAT.

Thanks,

**Kris M. Larson, P.G., QSD**

| Question   | Answer | Comment |    |
|--|--------|---------|----|
| Radioactivity wasn't checked or is </= background as measured by a survey meter. | N/A    |         | 6  |
| The cooler's custody seal, if present, is intact.                                | N/A    |         | 7  |
| Sample custody seals, if present, are intact.                                    | N/A    |         | 8  |
| The cooler or samples do not appear to have been compromised or tampered with.   | True   |         | 9  |
| Samples were received on ice.  | True   |         | 10 |
| Cooler Temperature is acceptable.  | True   |         | 11 |
| Cooler Temperature is recorded.  | True   |         | 12 |
| COC is present.  | True   |         | 13 |
| COC is filled out in ink and legible.  | True   |         | 14 |
| COC is filled out with all pertinent information.                                | False  |         |    |
| Is the Field Sampler's name present on COC?                                      | True   |         |    |
| There are no discrepancies between the containers received and the COC.          | False  |         |    |
| Samples are received within Holding Time.  | True   |         |    |
| Sample containers have legible labels.   | True   |         |    |
| Containers are not broken or leaking.  | True   |         |    |
| Sample collection date/times are provided.                                       | True   |         |    |
| Appropriate sample containers are used.  | True   |         |    |
| Sample bottles are completely filled.  | True   |         |    |
| Sample Preservation Verified.  | N/A    |         |    |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True   |         |    |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").  | True   |         |    |
| Multiphasic samples are not present.   | True   |         |    |
| Samples do not require splitting or compositing.                                 | True   |         |    |
| Residual Chlorine Checked.   | N/A    |         |    |
