Hi Peter,
That makes a good deal of sense. It's a good way to filter out un-needed analytical testing.
Thanks,

Mark Detterman

Subject: 914 West Grand (RO#3326)

Hello Mark, we are scheduled to begin the drilling/sampling at 914 W. Grand tomorrow morning. The field work should be completed by Friday. With respect to the TPH diesel/oil analyses for soil, we would like to propose running all the analyses first without silica gel cleanup. Any sample that has a detection exceeding Tier 1 ESLs would then be analyzed for TPH diesel/oil with silica gel cleanup. Because of the number of samples being analyzed, the cost to run all of the analyses with and without silica gel cleanup is substantial.

Sincerely,

Peter Langtry, P.G., C.E.G.
