4. DOOR SIZES SHOWN ON DOOR SH=SCHEDULE ARE OPENING SIZES. ALLOWANCE FOR THRESHOLDS, ETC., SHALL BE TAKEN OFF THE DOOR. DOORS AND FRAMES SHALL BE REINFORCED WHERE REQUIRED FOR CLOSERS, STOPS, AND HARDWARE. EVERY REQUIRED EXIT MUST BE LARGE ENOUGH TO PERMIT A DOOR AT LEAST 3'-0" WIDE BY 6'8" HIGH. EXIT DOORS SHALL BE OPEN AT LEAST 90 DEGREES AND PROVIDE A CLEAR WIDTH OF AT LEAST 32". A 34" WIDE DOOR IS ACCEPTABLE WITHIN A UNIT PROVIDED A 32" CLEAR OPENING EXISTS.
5. THE SIZE OF A PAIR OF DOORS NOTED ON SCHEDULE IS THE TOTAL DOOR OPENING FOR BOTH LEAVES. EACH LEAF IS TO BE OF EQUAL SIZE UNLESS NOTED OTHERWISE. THE INACTIVE LEAF WHERE INDICATED SHALL BE SECURED BY AUTOMATIC FLUSH BOLTS OR BOLTS FRO PANIC HARDWARE.
6. DOORS IN RATED WALLS SHALL CONSIST OF SELF-CLOSING, SELF LATCHING ASSEMBLIES WITH SMOKE AND DRAFT SEALS AT HEAD AND JAMBS. DOOR ASSEMBLY RATINGS SHALL BE AS INDICATED ON DOOR SCHEDULE. HOLD OPEN DEVISES (WHERE REQUIRED) ON RATED ASSEMBLIES SHALL BE MAGNETICALLY OPERATED AND CONTROLLED BY SMOKE DETECTORS
7. AIR LEAKAGE AT EXTERIOR DOORS SHALL BE LIMITED BY THE FOLLOWING:
   A. ALL DOORS SHALL BE PROVIDED WITH A SEAL, ASTRAGAL, OR BAFFLE AT THE HEAD AND SILL.
   B. DOORS MOUNTED ON EITHER THE INSIDE OR OUTSIDE OF AN EXTERIOR WALL SHALL HAVE A MINIMUM 1/2" LAP AT EACH JAMB.
   C. DOORS REQUIRING VERTICAL TRACK OR GUIDES SHALL USE A CONTINUOUS MOUNTING ANGLE, SEALED, CAULKED, GASKETED, OR WEATHER-STRIPPED TO LIMIT AIR LEAKAGE.
   D. MEETING RAILS OR SECTION DOORS AND MEETING STILES OR RAILS OR BI-PARTING DOORS SHALL BE PROVIDED WITH A SEAL, ASTRAGAL, OR BAFFLE.
8. DOORS WITH LOUVERS: LOUVER SHALL BE 12" HIGH, UNLESS NOTED OTHERWISE, LOUVERS IN FIRE-RATED ASSEMBLIES TO BE FUSIBLE LINK FIRE DAMPERS. LOUVERS IN EXTERIOR DOORS TO BE VANDAL RESISTANT. SEE DOOR TYPE ELEVATIONS.
9. DOOR THICKNESS TO BE 1 3/4" FOR EXTERIOR DOORS AND 1 3/8" FOR INTERIOR DOORS, UNLESS NOTED OTHERWISE.
10. EXIT DOORS MUST OPEN FOR THE INSIDE WITHOUT A KEY, OR ANY SPECIAL KNOWLEDGE OR EFFORT. EXIT DOORS FROM BUILDINGS OR ROOMS SERVICE 10 OR FEWER OCCUPANTS MAY HAVE A NIGHT LATCH, DEADBOLT OR SECURITY CHAIN, AS LONG AS THE DOORS CAN SILL BE OPENED FROM THE INSIDE WITH A KEY, SPECIAL KNOWLEDGE OR EFFORT. IN ADDITION, THESE DEVICES ARE NOT MOUNTED MORE THAN 48" ABOVE THE FLOOR. MANUALLY OPERATED EDGE BOLTS, SURFACE MOUNTED FLUSH BOLTS AND SURFACE BOLTS ARE PROHIBITED. WHEN EXIT DOORS ARE USED IN PAIRS AND AUTOMATIC FLUSH BOLTS ARE USED, THE DOOR LEAF WITH THE FLUSH BOLT MUST HAVE NO DOORKNOB OR SURFACE MOUNTED HARDWARE. THE UNLATCHING OF ANY LEAF MUST NOT REQUIRE MORE THAN ONE OPERATION. SPECIAL LOCKING DEVICES SHALL BE APPROVED BY THE LOCAL AUTHORITY.
11. DOOR HARDWARE SHALL COMPLY WITH THE FOLLOWING:
   A. LATCHING AND LOCKING DOORS THAT ARE HAND ACTIVATED AND ARE IN THE PATH OF TRAVEL, SHALL BE OPERABLE WITH A SINGLE EFFORT BY LEVER TYPE HARDWARE, PANIC BARS, PUSH-PULL ACTIVATING BARS OR OTHER HARDWARE DESIGNED TO PROVIDE PASSAGE WITHOUT REQUIRING THE ABILITY TO GRASP THE OPENING HARDWARE.
   B. MAXIMUM EFFORT TO OPERATE DOORS SHALL NOT EXCEED 8 1/2 LBS. FOR EXTERIOR DOORS AND 5 LBS. FOR INTERIOR DOORS. SUCH PULL OR PUSH EFFORT SHALL BE APPLIED AT RIGHT ANGLES TO HINGED DOORS AND AT THE CENTER PLANE OF SLIDING OR FOLDING DOORS. COMPENSATING DEVICES OR AUTOMATIC DOOR OPERATORS MAY BE UTILIZED TO MEET THE ABOVE STANDARDS. WHEN FIRE DOORS ARE REQUIRED, THE MAXIMUM EFFORT TO OPERATE THE DOOR MAY BE INCREASED NOT TO EXCEED 15 LBS.
   C. HAND ACTIVATED DOOR HARDWARE SHALL BE CENTERED BETWEEN BETWEEN 30" AND 44" ABOVE THE FLOOR.
   D. PROVIDE DEADBOLTS WITH HARDENED INSERTS. DEADLOCKING LATCH KEY OPERATED LOCKS SHALL BE OPENABLE FROM THE INSIDE WITHOUT A KEY, SPECIAL KNOWLEDGE OR EFFORT.
   E. ALL DOORS IN ALUMINUM FRAMES SHALL BE PROVIDED WITH AN ARMORED STRIKE.
   F. THRESHOLDS AT EXTERIOR DOORS OTHER THAN PRIMARY ENTRANCES SHALL BE NO HIGHER THAN 3/4" SUCH THRESHOLD SHALL BE BEVELED NO GREATER THAN 1:2.
12. THE BOTTOM 10 INCHES OF ALL DOORS WITH ADA REQUIREMENTS EXCEPT SLIDING AND POCKET DOORS SHALL HAVE A SMOOTH INTERRUPTED TO ALLOW THE DOOR TO BE OPENED BY A WHEELCHAIR FOOTREST WITHOUT CREATING A TRAP OR HAZARDOUS CONDITION.
13. ALL EXTERIOR DOORS SHALL BE WEATHER-STRIPPED ON ALL SIDES PER TITLE 24, SECTION T20-1451-1542
14. COORDINATE FABRICATION OF ALL DOORS AND FRAMES WITH THE PROJECTS SECURITY REQUIREMENTS.
15. INSTALLATION AND CONSTRUCTION OF FRAMES, JAMBS, STRIKES AND HINGES FOR EXTERIOR SWINGING DOORS SHALL BE AS FOLLOWS:
   A. DOOR JAMBS SHALL BE INSTALLED WITH SOLID BACKING IN SUCH A MANNER THAT NO VOIDS EXIST BETWEEN THE STRIKE SIDE OF THE JAMB AND THE FRAME OPENING.
   B. DOOR STOPS ON WOODEN JAMBS FOR IN-SWINGING DOORS SHALL BE OF ONE-PIECE CONSTRUCTION WITH THE JAMB. JAMBS FOR ALL DOORS SHALL BE CONSTRUCTED OR PROTECTED SO AS TO PREVENT VIOLATION OF THE STRIKE.
   C. THE STRIKE PLATE FOR DEAD BOLTS ON ALL WOOD FRAMED DOORS SHALL BE CONSTRUCTED OF MIN. SIXTEEN USGA. STEEL, BRONZE, OR BRASS, AND SECURED TO THE JAMB BY A MINIMUM OF TWO SCREWS, WHICH MUST PENETRATE AT LEAST TWO INCHES INTO SOLID BACKING BEYOND THE SURFACE TO WHICH THE STRIKE IS ATTACHED.
   D. HINGES FOR OUT-SWINGING DOORS SHALL DE EQUIPPED WITH NON- REMOVABLE HINGE PINS OR A MECHANICAL INTERLOCK TO PRECLUDE REMOVAL OF THE DOOR FROM THE EXTERIOR BY REMOVING THE HINGE PINS.
   E. USE DOOR JAMB AND HEAD GASKETING AND DOOR BOTTOM GASKETING AT ENTRY DOORS TO SEAL THE SOLID CORE DOORS AGAINST WEATHER AND SOUND.
16. ALL EXTERIOR SWINGING DOORS OF ANY RESIDENTIAL BUILDING SHALL BE EQUIPPED AS FOLLOWS:
   A. ALL WOOD DOORS SHALL BE OF SOLID CORE CONSTRUCTION WITH A MINIMUM THICKNESS OF ONE AND THREE-FOURTHS INCHES, OR WITH PANELS NOT LESS THAN NINE-SIXTEENTHS INCH THICK.
   B. A SINGLE OR DOUBLE DOOR SHALL BE EQUIPPED WITH A DOUBLE OR SINGLE CYLINDER DEAD BOLT LOCK. THE BOLT SHALL HAVE A MINIMUM PROJECTION OF ONE INCH AND BE CONSTRUCTED SO AS TO REPEL CUTTING TOOL ATTACK. THE DEAD BOLT SHALL HAVE AN EMBEDMENT OF AT LEAST THREE-FOURTHS INCH INTO THE STRIKE RECEILING THE PROJECTED BOLT. THE CYLINDER SHALL HAVE CYLINDER GUARD, A MINIMUM OF FIVE-PIN TUMBLERS, AND SHALL BE CONNECTED TO THE INNER PORTION OF THE LOCK BY CONNECTING SCREWS OF AT LEAST ONE-FOURTH INCH DIAMETER. ALL INSTALLATION SHALL BE DONE SO THAT THE PERFORMANCE OF THE LOCKING DEVICE WILL MEET THE INTENDED ANTI-BURGULARY REQUIREMENTS. DOUBLE CYLINDER-TYPE DEAD BOLT LOCKS SHALL BE CONSTRUCTED SO AS TO PREVENT THE KEY FROM BEING REMOVED FROM THE INTERIOR CYLINDER WHEN THE BOLT IS PROJECTED. A DUAL LOCKING MECHANISM CONSTRUCTED SO BOTH THE DEAD BOLT AND LATCH CAN BE RETRACTED BY A SINGLE ACTION OF THE INSIDE DOOR KNOB, OR LEVER, MAY BE UTILIZED PROVIDED IT MEETS ALL OTHER SPECIFICATIONS FOR LOCKING DEVICES.

The application complies with the Minor Conditional Use Permit, Minor Variance and Design Review criteria contained in Sections 17.134, 17.148.050 and 17.136.070.A as set forth in the Oakland Zoning Regulations of the Oakland Planning Code. Attachment A contains the Conditions of Approval for the project. Attachment B contains the findings required for this approval and the reasons your proposal satisfies them. This approval is effective ten (10) days after the date of this letter unless appealed as explained below.

Information regarding the proposed project is summarized below:

General Plan Land Use Classification: Mixed Housing Type Residential
Zoning Designation: C-20 Shopping Center Commercial Zone
Environmental Determination: Exempt, Section 15332 of the State CEQA Guidelines: in-fill development project and 15183.
Historic Status: Not a Potentially Designated Historic Property (PDHP); Survey rating: F3
Service Delivery District: IV
City Council District: 4

An Appeal to the City Planning Commission of this Administrative Case decision may be submitted within ten (10) calendar days after the date of this letter, and by 4:00 p.m. An appeal shall be on a form provided by the Planning and Zoning Division of the Community and Economic Development Agency, and submitted to the same at 250 Frank H. Ogawa Plaza, Suite 2114, to the attention of Leigh McCullen, Planner III. The appeal shall state specifically wherein it is claimed there was error or abuse of discretion by the Zoning Administrator or wherein his/her decision is not supported by substantial evidence and must include payment of $710.31 in accordance with the City of Oakland Master Fee Schedule. The appeal itself must raise each and every issue that is contested, along with all the arguments and evidence in the record which supports the basis of the appeal; failure to do so may preclude you from raising such issues during your appeal and/or in court. If you challenge a Commission decision in court, you may be limited to issues raised at the hearing or in correspondence delivered to the Zoning Division, Community and Economic Development Agency, at, or prior to, the Appeal hearing. Any party seeking to challenge in court those decisions that are final and not administratively appealable to the City Council must do so within ninety (90) days of the date of the announcement of the Commission's final decision.

You **may** choose to record a signed Notice of Exemption (NOE) certifying that the project has been found to be exempt from CEQA review, the Environmental Declaration, and, if applicable, the De Minimis Impact Findings at the Alameda County Clerk's office at 1106 Madison Street, Oakland, CA 94612, at a cost of $25.00 made payable to the Alameda County Clerk. A NOE will be provided to you upon request. Please bring the original NOE related documents and five copies to the Alameda County Clerk, and return one date stamped copy to the Zoning Division, to the attention of Leigh McCullen, Planner III. Although recordation of the Notice of Exemption (NOE) **is optional** pursuant to Section 15062(d) of the California Environmental Quality Act (CEQA) Guidelines, recordation of the NOE reduces the statute of limitations on challenges to your project, based on environmental issues, to 35 days after the NOE is recorded with the County. In the absence of a recorded NOE, the statute of limitations for challenges extends to 180 days.

If you have any questions, please contact the case planner, Leigh McCullen, Planner III at (510) 238-4977 or lmccullen@oaklandnet.com.

Sincerely,

Scott Miller (signature)

FINDINGS FOR APPROVAL:
This proposal meets all the required findings under Minor Variance and Residential Design Review criteria contained in Section 17.148.050 and 17.136.070.A as set forth below and which are required to approve your application. Required findings are shown in bold type; reasons your proposal satisfies them are shown in normal type.

17.136.070A - RESIDENTIAL DESIGN REVIEW CRITERIA:

A. The proposed design will create a building or set of buildings that are well related to the surrounding area in their setting, scale, bulk, height, materials, and textures.

This project would provide for the construction of a mixed use building containing seven dwelling units a ground floor commercial space. The subject site is located at the northeast corner of School Street and 35th Avenue near the Laurel Shopping District. This section of 35th Avenue is characterized by a mixture of residential buildings interspersed with commercial uses while School Street consists primarily of single-family residential dwellings. The project has been designed to reflect the change in context between 35th Avenue and School Street. The portion of the building facing School Street would be lower in height and have a landscaped front setback to create a transition between the higher densities along 35th Avenue to the single-family dwellings along School. The building facing 35th Avenue, which would include the ground floor commercial unit, would be slightly taller with a minimum front setback. Parking would be accessed from behind the building and not visible from the street. The overall the commercial and residential components of the development would contribute to the setting of surrounding area.

There is no defining architectural context, and the scale, bulk, height, materials, and textures found within the neighborhood vary. The simple building design would not conflict with or diminish the varied architectural context of the neighborhood. The building would feature a corner element, well proportioned and positioned window and door openings. Overall the proposed design would be well-related to the surrounding area.

B. The proposed design will protect, preserve, or enhance desirable neighborhood characteristics.

The proposed pedestrian oriented design of the building and the mixture of commercial and residential uses of the building would contribute to the successful operation of this corridor.

C. The proposed design will be sensitive to the topography and landscape.

The subject site does not contain any significant topographic features.

D. If situated on a hill, the design and massing of the proposed building relates to the grade of the hill.

The proposed building would not be situated on a hill.

E. The proposed design conforms in all significant respects with the Oakland Comprehensive Plan and with any applicable district plan or development control map which has been adopted by the City Council.

The Oakland General Plan recommends Mixed Housing Type Residential development for the subject site Mixed Housing Type Residential areas are intended to create, maintain and enhance residential areas characterized by a mixture of housing types and neighborhood servicing businesses. The proposed development consisting of 7 dwelling units and one commercial space would be consistent with the General Plan.

SECTION 17.148.050(a) - MINOR VARIANCE FINDINGS:

A. That strict compliance with the specified regulation would result in practical difficulty or unnecessary hardship inconsistent with the purposes of the zoning regulations, due to unique physical or topographic circumstances or conditions of design; or as an alternative in the case of a minor variance, that such strict compliance would preclude an effective design solution improving livability, operational efficiency, or appearance.

The proposed building would have a zero-foot setback along 35th Avenue where 7.5 feet would be required. The building has been designed to create a pedestrian oriented, urban edge along the street reflective of the characteristics of the existing streetscape. Strict compliance of the setback requirement would diminish the buildings interaction with the street and the pedestrian experience. The building would also have a 5'00" setback along School Street where 10'00" is required. The proposed setback is consistent with the setbacks of the adjacent dwellings located along School Street. A height variance is also required for 32' along the interior side yard adjacent to the R-50 zone where a maximum height of 30' is permitted. This height limit is required due to the fact that the subject site is zoned C-20 and the neighboring site on 35th Avenue is zoned R-50. The purpose of this height limit is to create a transition between more intense commercial buildings typically found in the C-20 zone to lower intensity residential buildings found in the R-50 zone. In this case the required height limit is unwarranted because, although zoned R-50, the adjacent property is occupied by a mixed use building containing a liquor store on the ground floor with residential and office use on the second floor.

B. That strict compliance with the regulations would deprive the applicant of privileges enjoyed by owners of similarly zoned property; or, as an alternative in the case of a minor variance, that such strict compliance would preclude an effective design solution fulfilling the basic intent of the applicable regulation.

The proposed buildings have been designed to reflect the pattern of development of the neighborhood. The design and site planning solution successfully incorporates an urban edge to the building while maintaining openness between the proposed mixed use development and the adjacent residential development.

C. That the variance, if granted, will not adversely affect the character, livability, or appropriate development of abutting properties or the surrounding area, and will not be detrimental to the public welfare or contrary to adopted plans or development policy.

The design and site planning solution successfully incorporates an urban edge to the building while maintaining openness and a transition between the proposed mixed use development and the adjacent residential development.

D. That the variance will not constitute a grant of special privilege inconsistent with limitations imposed on similarly zoned properties or inconsistent with the purposes of the zoning regulations.

The proposed variance would not be inconsistent with the purposes of the zoning regulations since the site has been designed to meet the intent of providing a transition between developments located in commercial zones and adjacent residential development.

E. For proposals involving one or two dwelling units on a lot: That the elements of the proposal requiring the variance (e.g. elements such as buildings, walls, fences, driveways, garages and carports, etc.) conform with the design review criteria set forth in the design review procedure at Section 17.136.070.

The proposal involves more the two units.

F. For proposals involving one or two dwelling units on a lot and not requiring design review or site development and design review: That all elements of the proposal conform to the "Special Residential Design Review Checklist Standards and Discretionary Criteria" as adopted by the City Planning Commission.

The proposal involves more the two units.

G. For proposals involving one or two residential dwelling units on a lot: That, if the variance would relax a regulation governing maximum height, minimum yards, maximum lot coverage or building length along side lot lines, the proposal also conforms with at least one of the following criteria:

a. The proposal when viewed in its entirety will not adversely impact abutting residences to the side, rear, or directly across the street with respect to solar access, view blockage and privacy to a degree greater than that which would be possible if the residence were built according to the applicable regulation and, for height variances, the proposal provides detailing, articulation or other design treatments that mitigate any bulk created by the additional height; or

The proposal involves more the two units.

b. Over 60 percent of the lots in the immediate vicinity are already developed and the proposal does not exceed the corresponding as-built condition on these lots and, for height variances, the proposal provides detailing, articulation or other design treatments that mitigate any bulk created by the additional height. The immediate context shall consist of the five closest lots on each side of the project site plus the ten closest lots on the opposite side of the street

C. Test and Balance Reports.
D. Each piece of air conditioning and heating equipment and the air distributions systems shall be tested and adjusted to insure proper functioning of all control, proper distribution of air, maintenance of temperature, elimination of drafts, noise and vibration, and left in first class operating condition. The air system shall be readjusted if required for comfort of each room.
E. The mechanical contractor will make any changes in the pulleys, belts, dampers, vanes, baffles and the like required for correct balance of system as recommended bt T&B agency and to the satisfaction of the Owner.

1.03 SUBMITTALS

A. Provide (6) six copies of test and balance report to the Owner for review and approval in soft cover, letter size, 3–ring binder manual complete with index page and indexing tabs. The report shall include a set of reduced drawings with air outlets and equipment identified to correspond with data sheets and indicating hermostat locations.

B. The test and balance report shall include, as a minimum, but not be limited to:
1. Each equipment shall be identified by equipment service number, manufacturer, model number, and serial number, motor horsepower, motor nameplate voltage, motor RPM, actual and design static pressure, actual outlet velocity, actual CFM, design CFM.
2. Each coil shall be identified by equipment service number, manufacturer, model number and size, number of rows, total CFM, air inlet and outlet dry bulb and wet bulb temperatures.
3. Each air outlet shall be identified with manufacture, model number, size, velocity, correction factor, actual CFM, design CFM.
4. Traverse reading of main supply, return and outside air ducts to establish air quantities.
5. Test and record temperatures from temperature controllers such as day thermostat, night thermostat.
6. Test and record temperatures from main supply air trunk, mixed air during the full heating and full cooling cycle and economizer cycle.
7. Exhaust system balance.

2.00 – PRODUCTS (Not Applicable)

3.00 – EXECUTION

3.01 DEFICIENCIES IN SYSTEM

Balancing Contractor shall report in writing to the Owner any discrepancies on items not installed in accordance with contract documents, all deficiencies in HVAC system, and other deficiencies. The Owner will reimburse the balancing contractor if additional work is required for his phase of work.

3.02 WARRANTY

The test and balance agency shall include an extended warranty of 90 days, after completion of work, during which time the Owner, at their discretion, may request a recheck or resetting of any outlet, supply air fan, or exhaust fan as listed in test report.

Required Acceptance Tests

Designer:

This form is to be used by the designer and attached to the plans. Listed below is the acceptance test for Envelope Fenestrations system. The designer is required to check the acceptance tests and list all the fenestration products that require an acceptance test. If all the site-built fenestration of a certain type requires a test, list the different fenestration products and the number of systems. The NA7 Section in the Appendix of the Nonresidential Reference Appendices Manual describes the test. Since this form will be part of the plans, completion of this section will allow the responsible party to budget for the scope of work appropriately.

Enforcement Agency:

Systems Acceptance. Before Occupancy Permit is granted for a newly constructed building or space or whenever new fenestration is installed in the building or space shall be certified as meeting the Acceptance Requirements.
The ENV-2A form is not considered a complete form and is not to be accepted by the enforcement agency unless the boxes are checked and/or filled and signed. In addition, a Certificate of Acceptance forms shall be submitted to the enforcement agency that certifies plans, specifications, installation certificates, and operating and maintenance information meet the requirements of §10-103(b) of Title 24 Part 6. The field inspector must receive the properly filled out and signed forms before the building can receive final occupancy. A copy of the ENV-2A for each different fenestration product line must be provided to the owner of the building for their records.

§118(a):	Installed insulating material shall have been certified by the manufacturer to comply with the California Quality Standards for insulating material, Title 20 Chapter 4, Article 3.
§118(c):	All Insulating Materials shall be installed in compliance with the flame spread rating and smoke density requirements of Sections 2602 and 707 of Title 24, Part 2.
§118(f):	The opaque portions of framed demising walls in nonresidential buildings shall have insulation with an installed R-value of no less than R-13 between framing members.
§117(a):	All Exterior Joints and openings in the building that are observable sources of air leakage shall be caulked, gasketed, weatherstripped or otherwise sealed
§116(a) 1:	Manufactured fenestration products and exterior doors shall have air infiltration rates not exceeding 0.3 cfm/ft.² of window area, 0.3 cfm/ft.² of door area for residential doors, 0.3 cfm/ft.² of door area for nonresidential single doors (swinging and sliding), and 1.0 cfm/ft.² for nonresidential double doors (swinging).
§116(a) 2:	Fenestration U-factor shall be rated in accordance with NFRC 100, or the applicable default U-factor.

MECHANICAL MANDATORY MEASURES: NONRESIDENTIAL MECH-MM

Project Name: 35 th & SCHOOL MIXED - USE | Date: 11/20/2013

Equipment and System Efficiencies

§111:		Any appliance for which there is a California standard established in the Appliance Efficiency Regulations will comply with the applicable standard.
§115(a):		Fan type central furnaces shall not have a pilot light.
§123:		Piping, except that conveying fluids at temperatures between 60 and 105 degrees Fahrenheit, or within HVAC equipment, shall be insulated in accordance with Standards Section 123.
§124:		Air handling duct systems shall be installed and insulated in compliance with Sections 601, 602, 603, 604, and 605 of the CMC Standards.

Controls

§122(e):		Each space conditioning system shall be installed with one of the following:
	1A.	Each space conditioning system serving building types such as offices and manufacturing facilities (and all others not explicitly exempt from the requirements of Section 112 (d)) shall be installed with an automatic time switch with an accessible manual override that allows operation of the system during off-hours for up to 4 hours. The time switch shall be capable of programming different schedules for weekdays and weekends and have program backup capabilities that prevent the loss of the device's program and time setting for at least 10 hours if power is interrupted; or
	1B.	An occupancy sensor to control the operating period of the system; or
	1C.	A 4-hour timer that can be manually operated to control the operating period of the system.
	2.	Each space conditioning system shall be installed with controls that temporarily restart and temporarily operate the system as required to maintain a setback heating and/or a setup cooling thermostat setpoint.
§122(g):		Each space conditioning system serving multiple zones with a combined conditioned floor area more than 25,000 square feet shall be provided with isolation zones. Each zone: shall not exceed 25,000 square feet; shall be provided with isolation devices, such as valves or dampers that allow the supply of heating or cooling to be setback or shut off independently of other isolation areas; and shall be controlled by a time control device as described above.
§122(c):		Thermostats shall have numeric setpoints in degrees Fahrenheit (F) and adjustable setpoint stops accessible only to authorized personnel.
§122(b):		Heat pumps shall be installed with controls to prevent electric resistance supplementary heater operation when the heating load can be met by the heat pump alone
§122(a&b):		Each space conditioning system shall be controlled by an individual thermostat that responds to temperature within the zone. Where used to control heating, the control shall be adjustable down to 55 degrees F or lower. For cooling, the control shall be adjustable up to 85 degrees F or higher. Where used for both heating and cooling, the control shall be capable of providing a deadband of at least 5 degrees F within which the supply of heating and cooling is shut off or reduced to a minimum.

Ventilation

§121(e):	Controls shall be provided to allow outside air dampers or devices to be operated at the ventilation rates as specified on these plans.
§122(f):	All gravity ventilating systems shall be provided with automatic or readily accessible manually operated dampers in all openings to the outside, except for combustion air openings.
§121(f):	Ventilation System Acceptance. Before an occupancy permit is granted for a newly constructed building or space, or a new ventilating system serving a building or space is operated for normal use, all ventilation systems serving the building or space shall be certified as meeting the Acceptance Requirements for Code Compliance.

Service Water Heating Systems

§113(c)		Installation
	3.	Temperature controls for public lavatories. The controls shall limit the outlet Temperature to 110°F.
	2.	Circulating service water-heating systems shall have a control capable of automatically turning off the circulating pump when hot water is not required.

This form is to be used by the designer and attached to the plans. Listed below is the acceptance test for the lighting system, LTG-2A and LTG-3A. The designer is required to check the acceptance tests and list all control devices serving the building or space shall be certified as meeting the Acceptance Requirements for Code Compliance. If all the lighting system or control of a certain type requires a test, list the different lighting and the number of systems. The NA1 Section in the Appendix of the Nonresidential Reference Appendices Manual describes the test. Since this form will be part of the plans, completion of this section will allow the responsible party to budget for the scope of work appropriately. Forms can be grouped by type of Luminaire controlled.

Enforcement Agency:

Systems Acceptance. Before Occupancy Permit is granted for a newly constructed building or space or when ever new lighting system with controls is installed in the building or space shall be certified as meeting the Acceptance Requirements.

The LTG-2A and LTG-3A forms is not considered a complete form and are not to be accepted by the enforcement agency unless the boxes are checked and/or filled and signed. In addition, a Certificate of Acceptance form shall be submitted to the enforcement agency that certifies plans, specifications, installation certificates, and operating and maintenance information meet the requirements of §10-103(b) of Title 24 Part 6. The field inspector must receive the properly filled out and signed forms before the building can receive final occupancy. A copy of the LTG-2A and LTG-3A for each different lighting luminaire controlled must be provided to the owner of the building for their records.

A. Electrical service and separately derived alternating current system shall be grounded in accordance with NEC Article 250-3 to 250-26, inclusive.
B. Ground non-current carrying metal parts of electrical equipment enclosures, frames, conductor raceways or cable trays to provide a low impendance path for line-to-ground fault current and to bond all non-current carrying metal parts together. Provide ground conductor in each raceway system in addition to conductors shown. Equipment ground conductor shall be electrically and mechanically continuous from the electrical circuit source to the equipment to be grounded. Size ground conductors per NEC Article 250-122 unless larger conductors are shown on drawings.
C. Grounding conductors shall be identified with green insulation. Where green insulation is not available on larger sizes, black insulation shall be used and suitable identified with green tape at each junction box or device enclosure.

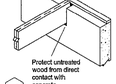
BEARING AT CONCRETE WALL



L4

CONNECTION OF MULTIPLE PIECES OF TOP-LOADED BEAMS (1)

1½" Width Pieces:
- Minimum of 3 rows 10d (3" x 0.128") nails at 12" o.c.
- Minimum of 4 rows 10d (3" x 0.128") nails at 12" o.c. for 14" and deeper beams
- If using 12d (3½") or larger nails, the number of nailing rows may be reduced by one.

3½" Width Pieces:
- Minimum of 2 rows ½" bolts at 24" o.c. staggered

(1) Load must be applied evenly across entire beam width. Otherwise, use connections for side-loaded beams.

Additional nailing or bolting may be required with side-loaded multiple-member beams. Refer to current product literature.

- Nailing rows must be offset at least ½" and staggered.
- 14 ga. staples may be substituted for 8d (2½") nails if minimum penetration of 1" into the TJI® joist or rim board is achieved.

Fastener On-Center Spacing per Row
Maximum spacing of nails is:
- For joist widths 9½" or less: 18" on-center
- For joist widths greater than 11⅞": 24" on-center

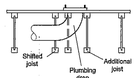
INSTALLATION TIPS

- Subfloor adhesive will improve floor performance, but may not be required.
- When joists are doubled at non-load bearing parallel partitions, space joists apart the width of the wall for plumbing or HVAC.
- Additional joist at plumbing drop (see detail).



- Squash blocks and blocking panels carry stacked vertical loads (details B1 and B2). Packing out the web of a TJI® joist (with web stiffeners) is not a substitute for squash blocks or blocking panels.

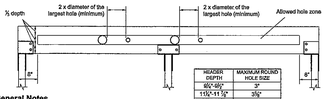
Rectangular holes based on measurement of longest side.

- Holes may be located vertically anywhere within the web. Leave ⅛" of web (minimum) at top and bottom of hole.
- Knockouts are located in web at approximately 12" on-center; they do not affect hole placement.
- For simple span (0 minimum), uniformly loaded joists used in residential applications, one maximum size round hole may be located at the center of the joist span **provided no other holes occur in the joist.**
- Distances are based on the maximum uniform loads shown in current iLevel product guides. For other load conditions or hole configurations contact your iLevel representative.

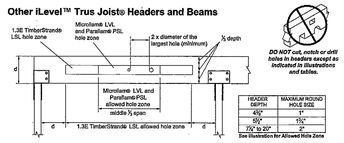
ALLOWABLE HOLES - Headers and Beams

1.55E TimberStrand® LSL Headers and Beams



General Notes
- Round holes only
- No holes in headers or beams in plank orientation.

Other iLevel™ Trus Joist® Headers and Beams



General Notes
- Allowed hole zone suitable for **uniformly loaded headers and beams only.**
- Round holes only
- No holes in cantilevers.
- No holes in headers or beams in plank orientation.

WARNING

Joists are unstable until braced laterally

Bracing Includes:
- Blocking
- Hangers
- Sheathing
- Rim Board
- Strut Lines
- Rim Joist

DO NOT walk on joists until braced. INJURY MAY RESULT.

DO NOT walk on joists that are lying flat.

DO NOT stack building materials on unsheathed joists. Stack only over beams or walls.

WARNING NOTES:

Lack of proper bracing during construction can result in serious accidents. Observe the following guidelines:

1. All blocking, hangers, rim boards and rim joists at the end supports of the TJIe joists must be completely installed and properly nailed.
2. Establish a permanent deck (sheathing), nailed to the first 4 feet of joists at the end of the bay or braced end wall.
3. Safety bracing of 1x4 (minimum) must be nailed to a braced end wall or sheathed area and to each joist.
4. Sheathing must be properly nailed to each TJIe joist before additional loads can be placed on the system.
5. Ends of cantilevers require safety bracing on both the top and bottom flanges.
6. TJI® joist flanges must remain straight within 1/2" from true alignment.
