Kathy,

Based on our phone conversation a few minutes ago, it appears reasonable to provide an extension to the submittal date for the site investigation report for the subject site. This is based on the slow response by the City of Oakland permitting agency. To this end, I've extended the due date to December 31, 2018, and have updated Geotracker to reflect this change.

Kathy,

I did forget to comment on the use of an air knife to clear a hole. Please be aware that the LTCP requires soil samples in the 0 – 5 (and 5 – 10) foot depth intervals. ACDEH requires that an air knife not be used in proximity to a soil sample to be collected for characterization due to the probability of volatilization of volatile compounds. Collection with a hand auger is preferred.

Should you have questions, please let me know.
