RE: **Former Thrifty Oil Co. Station #049**
ARCO Products Company Station #9535
3400 San Pablo Avenue
Oakland, CA 94612
*2nd Quarter 2002, Status Report and Proposal to Upgrade
the existing Remediation System*

Dear Ms. Hugo:

Presented herewith is the Second Quarter 2002, Status Report for former Thrifty Oil Co. Station #049 located at 3400 San Pablo Avenue, Oakland, California.

Thrifty proposes not only to connect well MW-4 to the existing remediation system to enhance the reduction of petroleum hydrocarbons in the groundwater, but also to overhaul and upgrade the existing remediation system. Once written approval is received from the ACHCS, Thrifty will commence with this scope of work..

If you have any questions or comments, please contact the undersigned in this report or myself at (562) 921-3581.

Sincerely,

Chris Panaitescu
General Manager
Environmental Affairs

RE: **Former Thrifty Oil Co. Station #049**
3400 San Pablo Avenue
Oakland, CA 94612
2nd Quarter 2002, Status Report

Dear Ms. Hugo:

Presented herein is the Second Quarter 2002, Status Report prepared for former Thrifty Oil Co. (Thrifty) Station #049 located at 3400 San Pablo Avenue, Oakland, California (**Figure 1**). Presented in this report are the results of the site monitoring and remediation efforts conducted in the second quarter 2002. Thrifty has retained the services of Earth Management Company (EMC) to conduct quarterly monitoring and sampling, and remediation system monitoring activities at this site.

Groundwater Monitoring

Depth to groundwater is measured in each monitoring well on a quarterly basis. In general, groundwater occurs beneath the station at depths ranging from 2.46 feet below surface grade (bsg) in monitoring well MW-1 to 8.43 feet bsg in monitoring well MW-2 (**Appendix A**). A groundwater elevation contour map based on the May 17, 2002 data is presented in **Figure 2**. Groundwater elevation data indicates that the flow direction is toward the west-southwest with a groundwater gradient of approximately 0.06 feet/foot. Recovery well RW-1 was not sampled because it is a pumping well.

Quarterly Groundwater Sampling

As part of the ongoing groundwater monitoring program, groundwater samples were obtained from monitoring wells MW-1 through MW-7 on May 17, 2002. Groundwater samples were obtained by EMC and delivered in a chilled state following strict Chain-of-Custody procedures to a state-certified laboratory and analyzed for total petroleum hydrocarbons (TPH-g) by EPA method 8015 modified for gasoline. Volatile aromatic compounds of benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) were analyzed by EPA method 8021B. MTBE confirmation was performed using EPA method 8260B. A summary of historical analytical sampling results are provided in **Table 1**. Copies of the EMC Field Status Reports are presented in **Appendix A**, and copies of the laboratory analytical reports are contained in **Appendix B**.

TPH-g, BTEX, and MTBE concentrations appear in **Table 1** and **Appendix B**. The TPH-g, benzene, and MTBE isoconcentration maps are presented in **Figures 3, 4, and 5**, respectively. Laboratory results indicate the highest concentration of TPH-g, benzene, and MTBE were in monitoring well MW-4 (12,900 ug/L, 8

13116 Imperial Highway, Santa Fe Springs, CA 90670-0138 • (562) 921-3581

ug/L, and 13,600 ug/L, respectively).

Remediation Status

Site remedial activities were initiated in April 1991. Presently, the remediation system consists of a Groundwater Treatment System using activated carbon, with groundwater extraction from recovery well RW-1. System operational data is included in **Table 2** and **Appendix C**. During this reporting period, the groundwater treatment system processed 198,910 gallons of groundwater, and has treated approximately 1,303,568 gallons of groundwater since start up (April 1991) through June 2002. The system operated throughout the second quarter.

Inlet, intermediate 1, intermediate 2, intermediate 3, and outlet water samples were collected on April 12, 2002, and only outlet water samples were collected on June 3, 2002 from the treatment unit. The samples collected by EMC were sent to a state certified laboratory for analysis, and were analyzed for TPH-g, BTEX, and MTBE by EPA methods 8015M and 8021B, respectively. All analyzed outlet samples were below the laboratory detection limits. Copies of the laboratory analytical reports are included in **Appendix D**.

Other Activities

With the high concentration of petroleum hydrocarbons in well MW-4, Thrifty proposes not only to connect well MW-4 to the existing remediation system to enhance the reduction of the petroleum hydrocarbons in the groundwater, but also to overhaul and upgrade the existing remediation system. Once approval is received from the ACHCS to overhaul and upgrade the system including connecting well MW-4 to the system, Thrifty will bid out this scope of work to a consultant.

The groundwater monitoring wells, and the treatment unit, will be monitored and sampled for the next quarter. All site monitoring/sampling data generated during the next quarter will be reported in the third quarter 2002 monitoring report.

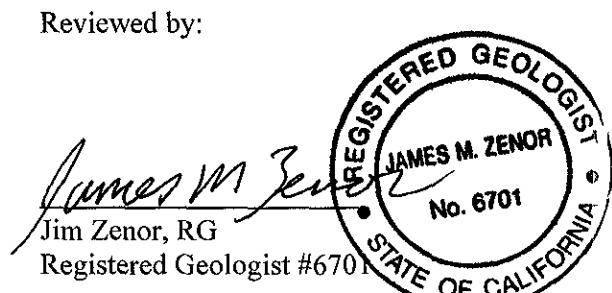

All interpretations expressed in this report are based solely upon data collected by EMC, and Associated Laboratories.

GROUNDWATER DATA
THRIFTY OIL STATION #049, OAKLAND, CA.

DATE SAMPLED	ANALYTICAL PARAMETERS						DEPTH TO GROUNDWATER (feet)	DEPTH TO PRODUCT (feet)	PRODUCT THICKNESS (feet)	CASING ELEVATION (feet)	GROUNDWATER ELEVATION (feet)
	TPH (ug/L)	BENZENE (ug/L)	TOLUENE (ug/L)	EthylBenzene (ug/L)	XYLENE (ug/L)	MTBE (ug/L)					

NOTE:

* MTBE 8020 / 8260

ND = Nondetectable

NP = No free hydrocarbon product

" - " = Not analyzed / Not available

Benzene, toluene, ethlybenzene, and xylene analyzed by EPA method 8020.

Total petroleum hydrocarbons (TPH) analyzed by EPA method 8015 modified for gasoline

Methyl-tert Butyl Ether (MTBE) analyzed by EPA method 8020 or 8260

WD PERMIT LIMITS:	NE	5.0	5.0	5.0	5.0	NE

Note:

< = less than laboratory detection level indicated

- = no sample / not analyzed

NE = Permit Limit not established

TPH is analyzed by EPA Method 8015 M

BTEX is analyzed by EPA Method 602 or 8020

*MTBE 8020/8260

In February 2000, the total cumulative discharge amount was corrected to reflect all system maintenance and flowmeter changeouts since the startup of the system. The total number may be different from previous versions of this table.

Total Hydrocarbons Removed = From 4/8/91 to 2/10/92, the influent TPHg is assumed to be 47,000 (3/9/92)

Cooler Receipt Form

Client: Thrifty oil Project: TOC 049
Cooler Received: 6/4 Cooler Opened: 6/4 By: Dmyr w
Signed: Dmyr

Was cooler scanned for presence of radioactivity, and noted if found? Yes / No

Were custody seals present on outside of cooler? Yes / No

a: If Yes, were they intact? Yes / No

b: Were signature and date correct? Yes / No

Were custody papers completely filled out? Yes / No

Did you sign and date the custody papers in the appropriate place? Yes / No

Was a shippers packing slip attached to the cooler? Yes / No

What kind of packing material was used? ice

Was sufficient ice used? Yes / No Temperature: 2.5°C Date: 6/4

Were all bottles sealed in plastic bags? Yes / No

Did all bottles arrive intact? Yes / No

Were all bottles labeled correctly? (ID, Analysis, Dates, Times) Yes / No

Were the correct containers included for the tests required? Yes / No

Were all VOA vials checked for headspace? NA / Yes / No

Was sufficient volume of sample sent in all containers? Yes / No

Were correct preservatives used? Yes / No

Approved by: Dmyr Date: 6/4

If not approved: Name of person contacted _____ Date: _____

COMMENTS

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods as indicated on the report. This cover letter is an integral part of the final report.

Order No.	Client Sample Identification
341914	TOC 049 OUTLET PSP #1
341915	TOC 049 INT 1
