Dear Ms. Hugo:

Presented herewith is the Second Quarter 2003, Status Report for former Thrifty Oil Co. Station #063 located at 6125 Telegraph Avenue, Oakland, California.

Thrifty proposes to connect well MW-4 to the remediation system and to upgrade the existing remediation system, in order to enhance the reduction of petroleum hydrocarbons in the groundwater. Once approval is received from the ACHCS, Thrifty will submit a workplan for remediation system upgrade.

If you have any questions or comments, please contact the undersigned in this report or myself at (562) 921-3581.

Sincerely,

RE: **Former Thrifty Oil Co. Station #063**
ARCO Products Company Station #9542

2nd Quarter 2003, Status Report

Dear Ms. Hugo:

Presented herein is the Second Quarter 2003, Status Report prepared for former Thrifty Oil Co. (Thrifty) Station #063 located at 6125 Telegraph Avenue, Oakland, California (**Figure 1**). This report presents the results of the site monitoring and remedial activities in the second quarter of 2003. Thrifty has retained the services of Earth Management Company (EMC) to conduct quarterly monitoring and sampling, and remedial system monitoring activities at this site.

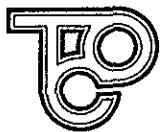

Groundwater Monitoring

Depth to groundwater is measured in each monitoring well on a quarterly basis. In general, groundwater occurred beneath the station at depths ranging from 14.58 feet below surface grade (bsg) in monitoring well MW-6 to 16.86 feet bsg in monitoring well MW-4 on April 16, 2003. A groundwater elevation contour map based on the April 16, 2003 data is presented in **Figure 2**. The groundwater flow is generally towards the southwest with a gradient of approximately 0.04 feet/foot.

Quarterly Groundwater Sampling

As part of the ongoing groundwater-monitoring program, groundwater samples were obtained from monitoring wells MW-1, MW-4, MW-5, and MW-6 on April 16, 2003. Groundwater from recovery well MW-3 was sampled on April 7, 2003, designated as the influent to the groundwater treatment system; this is because the treatment system recovers groundwater from this well only. Groundwater samples were obtained by EMC and delivered in a chilled state following strict Chain-of-Custody procedures to a state-certified laboratory. The samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-g), benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) by EPA methods 8015M and 8021B. Laboratory analytical sampling results are provided in **Table 1**. Copies of the EMC Field Status Reports are presented in **Appendix A**, and copies of the laboratory analytical reports are contained in **Appendix B**.

TPH-g, BTEX, and MTBE concentrations appear in **Table 1**, and **Appendix B**. TPH-g, benzene, and MTBE isoconcentration maps results are presented in **Figures 3, 4, and 5**, respectively. Laboratory results indicate the highest concentrations of TPH-g, benzene, and MTBE were in monitoring well MW-4, with concentrations of 15,800 ug/L, 411 ug/L, and 18,200 ug/L, respectively. The isoconcentration maps incorporated data from

13116 Imperial Highway, Santa Fe Springs, CA 90670 • (562) 921-3581

the treatment system influent well (MW-3).

Remediation Status

Site remedial activities were initiated in April 1991. Presently, the remediation system consists of a Groundwater Treatment System that extracts groundwater from monitoring well MW-3 with treatment utilizing activated carbon. System operational data is included in **Table 2** and **Appendix C**. During this reporting period, the groundwater treatment system processed approximately 93,540 gallons of groundwater from March 31, 2003 through June 23, 2003, and has treated approximately 2,205,589 gallons of groundwater since start up (April 1991) through June 23, 2003. The system was shut down for quarterly water sampling from April 14 through April 16, 2003, and again on May 5 through May 7, 2003 because of carbon change out. The system operated throughout the remainder of the quarter.

Inlet, intermediate 3, intermediate 2, intermediate 1, and outlet water samples were collected on April 7, 2003. The system water samples collected by EMC were sent to a state certified laboratory for analysis. The samples were analyzed for TPH-g, BTEX, and MTBE by EPA methods 8015 and 8021B. All outlet sample constituents were below the laboratory detection limit, except for toluene (2.2 ug/L). Inlet water sample results indicate concentrations of 14,000 ug/L TPH-g, 20 ug/L benzene, and 9,090 ug/L MTBE. Copies of the laboratory analytical reports are included in **Appendix D**.

Other Activities

With the high concentrations of petroleum hydrocarbons in well MW-4, Thrifty proposes to connect well MW-4 to the existing remediation system to enhance the reduction of the petroleum hydrocarbons in the groundwater, as originally requested in the 2nd Quarter, Status Report dated July 16, 2002. Once approval is received from the ACHCS, Thrifty will complete this work.

The groundwater monitoring wells and the treatment unit will be monitored and sampled during the next quarter. All site monitoring/sampling data generated during the next quarter will be reported in the Third Quarter 2003 monitoring report.

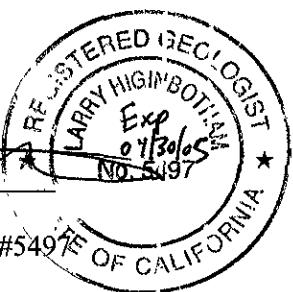

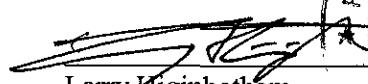

All interpretations expressed in this report are based solely upon the review of data collected by EMC, and Associated Laboratories.
