RE: RO#0000010_2009 Second Semi-Annual Groundwater Monitoring and Remediation System Operation and Maintenance Report - Port of Oakland, 651 Maritime Street, Oakland, CA_2010-01-25

Dear Mr. Plunkett:

Please find enclosed the report entitled *2009 Second Semi-Annual Groundwater Monitoring and Remediation System Operation and Maintenance Report - Port of Oakland, 651 Maritime Street, Oakland, CA* ("Report") dated January 2010, prepared by Malcolm Pirnie, Inc. ("Malcolm Pirnie") on behalf of the Port of Oakland ("Port")¹. This Report is being submitted in accordance with Alameda County Health Care Services Agency ("County") requirements, as specified in County letters dated March 23, 2006², January 19, 2007³, and September 30, 2008.⁴

The Port has retained Malcolm Pirnie to perform groundwater monitoring and maintenance of the remediation system. Results of the second 2009 semi-annual sampling event are contained in the enclosed report. The next monitoring event will be

¹ The Site has been referred to historically as the "Shippers" and "Ringsby" sites, based on the Port tenants that occupied the site at the time of release discoveries. Prior to site redevelopment in 2004, the site was also referred to as 2277 and 2225 Seventh Street. After redevelopment, the Site address became 651 and 555 Maritime Street, although referenced hereafter (including within this Report) as only **651 Maritime Street (Fuel Leak Case RO0000010)**.

² Letter from Mr. Barney Chan (County) to Mr. Jeff Rubin (Port), regarding *Fuel Leak Cases RO0000010 and RO0000185, 2277 and 2225 7th St., Oakland, CA 94607*, dated March 23, 2006.

³ Letter from Mr. Barney Chan (County) to Mr. Jeff Rubin (Port), regarding *Fuel Leak Cases RO0000010 and RO0000185, 2277 and 2225 7th St., Oakland, CA 94607*, dated January 19, 2007.

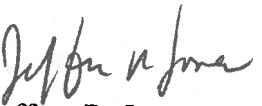

⁴ Letter from Mr. Steven Plunkett (County) to Mr. Jeffrey Rubin (Port) regarding *Fuel Leak Case RO0000187 (Global ID# T0600100892), Port of Oakland, 651 Maritime Street, Oakland, CA*, dated September 30, 2008.

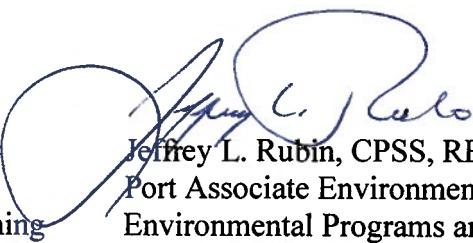

January 25, 2010

performed during the June/July 2010 time frame. If you have any questions or comments regarding the results, please contact Jeff Rubin at (510) 627-1134.

I declare, under penalty of perjury, that the information and/or recommendations contained in the attached report prepared by Malcolm Pirnie are true and correct to the best of my knowledge. Please note that the report is stamped by a Registered Professional Geologist in the State of California.

Sincerely,

Jeffrey R. Jones

Subject: December 2009 Semi-Annual Groundwater Monitoring and Remediation System Operation and Maintenance Report - Port of Oakland, 651 Maritime Street, Oakland, California

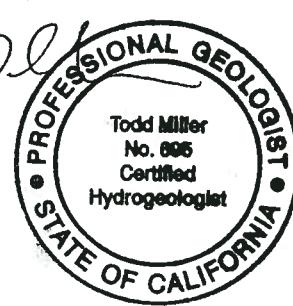

Dear Mr. Rubin:

Enclosed please find the December 2009 Semi-Annual Groundwater Monitoring and Remediation System Operation and Maintenance Report for 651 Maritime Street (formerly 2277 and 2225 Seventh Street), Alameda County Local Oversight Program case number RO0000010. This report has been prepared for submittal to Alameda County Health Care Services, Department of Environmental Health (ACHCS) on behalf of the Port of Oakland (the Port) as required in ACHCS' letter to the Port dated March 23, 2006. The ACHCS requires semi-annual groundwater monitoring and reporting at the Site.

Malcolm Pirnie assumed responsibility for implementing the groundwater monitoring program and operation of the free product recovery system on May 1, 2009. The enclosed report documents the groundwater sampling event conducted at the subject site in December 2009 by Malcolm Pirnie. This report also presents the free product recovery system operation and maintenance data collected by Malcolm Pirnie since June 2009.

If you have any questions or comments, please contact me at (510) 735-3014.

Sincerely,

Todd Miller, CHG
Project Manager

µg/L	Micrograms per liter

1. Introduction

This 2009 Second Semi-Annual Groundwater Monitoring and Remediation System Operation and Maintenance Report for 651 Maritime Street, Oakland, California (Site)¹ has been prepared by Malcolm Pirnie on behalf of the Port of Oakland (Port). This is the second semi-annual report for 2009, and includes the period from July through December. The Alameda County Health Care Services (ACHCS) is providing regulatory oversight under the Local Oversight Program (LOP), case number RO0000010.

The Site encompasses an approximate 13-acre parcel, located between the former Oakland Naval Supply Center and former Oakland Army Base (Figure 1). Groundwater impacts beneath the Harbor Facilities Complex are related to two former underground storage tank (UST) sites: 2277 Seventh Street and 2225 Seventh Street. A brief history of the two sites is provided below.

Former 2277 Seventh Street Site

In 1993, Uribe and Associates (Uribe) removed four Port-owned USTs from 2277 Seventh Street. Uribe collected soil samples from beneath the tanks at the time of the removal and submitted them for laboratory analyses. The laboratory reported that soil contained total petroleum hydrocarbons as diesel fuel (TPHd) and as gasoline (TPHg), as well as benzene, toluene, ethylbenzene, and total xylenes (BTEX) compounds. Uribe also observed free-phase product on the groundwater within the excavation. In 1994, Uribe installed three groundwater monitoring wells (MW-1 through MW-3) and in 1995 Alisto Engineering Group installed five additional wells (MW-4 through MW-8) (Figure 3). Quarterly groundwater monitoring was initiated in 1996 in accordance with an ACHCS approved workplan dated April 18, 1995.

Former 2225 Seventh Street Site

Former Port tenant Ringsby Terminals (formerly Dongary Investments) and/or its tenant owned and operated nine USTs at 2225 Seventh Street. One of the tanks in the cluster failed a tank integrity test in 1989. National Environmental Service Company (NESCO) removed the UST in March 1990. During the UST removal, NESCO collected soil and groundwater samples from the excavation. Analytical results indicated the presence of TPHd and BTEX. RAMCON Engineering and Environmental Contracting (RAMCON)

¹ The Site has been referred to in the past as the “Shippers” and “Ringsby” sites, based on the Port tenants occupying the site at the time of release discoveries. In addition, prior to site redevelopment in 2004, the site was referred to as 2277 and 2225 Seventh Street; the Site addresses after redevelopment are 651 and 555 Maritime Street, although referenced in this report as only 651 Maritime Street.

removed seven of the USTs (six diesel and one bulk fuel oil) in 1992. RAMCON observed a hole in the bulk fuel tank and a thin layer of an unspecified petroleum product floating on the groundwater in the excavation. During a separate event in 1992, RAMCON removed the remaining UST (a waste oil tank). Soil samples collected from that excavation indicated the presence of TPHd, TPH as motor oil (TPHmo), benzene, xylenes, and polynuclear aromatic hydrocarbons (PAHs). A water sample collected from the excavation also contained TPHd. In 1993, RAMCON installed three groundwater monitoring wells (MW-1 through MW-3) at the site and in 1994 quarterly groundwater monitoring began, as required by ACHCS.²

651 Maritime Site

In 2004, the Port developed the eastern-most eight acres of the Site into the Harbor Facilities Complex with an address of 651 Maritime Street (Figure 2). In 2006, the remaining five acres of the Site were developed by the Port into the Maritime Support Center with an address of 555 Maritime Street. The Maritime Support Center is currently leased to Shippers Transport Express.

Historic site investigations indicate that groundwater beneath the Site is impacted by a co-mingled plume containing dissolved and free-phase petroleum hydrocarbons, primarily in the diesel fuel range. In addition, well MW-4 (Figure 3, the western-most well) has historically contained dissolved petroleum hydrocarbons in the gasoline range.

In 1996, the Port installed a remediation system to recover free-phase product from beneath the Site. The free product recovery system was operated until 2003 when it was removed, with approval from the ACHCS.³ The ACHCS approved the removal of the system, with the stipulation that a new free product recovery system will be installed. A new system was installed in 2004, and has been in operation continuously since.

In 1998, Harding Lawson Associates abandoned MW-8 to make possible the expansion of the railroad tracks to the north of the Site. Replacement well MW-8A was installed in 2001 (Figure 3). In 2002, several monitoring wells were abandoned to facilitate construction of the new Harbor Facilities Complex. Accordingly, MW-1, MW-2 and MW-3 at the former 2225 Seventh Street site, and MW-6 and MW-7 at the former 2277 Seventh Street site were abandoned.⁴

The Port has monitored groundwater quality at the Site since 1994. In 2006, the ACHCS approved a modification of the groundwater monitoring frequency from quarterly to

² Letter from ACHCS to Dongary Investments dated 26 July 1994.

³ Letter from ACHCS to Port of Oakland dated March 27, 2003.

⁴ February 2009, *Second Semi-Annual 2008 Groundwater Monitoring and Remediation System Operation and Maintenance Report*.

semi-annually. The first semi-annual monitoring event occurred on July 28, 2006. The ACHCS also approved the use of Oxygen Releasing Compound™ (ORC) in well MW-4 to increase the dissolved oxygen (DO) concentration in groundwater and stimulate aerobic bio-degradation of the petroleum hydrocarbons reported in the groundwater at that location.⁵

On September 30, 2008, ACHCS approved a plan to install four additional groundwater monitoring wells, MW-9 through MW-12 (Figure 3), to enhance the existing monitoring well network and to replace wells removed during Site redevelopment.⁶ The wells were installed by MSE Group (MSE) and sampled in December 2008, along with the remaining Site wells. Well installation activities and sample results were reported by MSE in February 2009.⁴

⁵ Letter from ACHCS to Port of Oakland dated March 23, 2006.

⁶ Letter from Mr. Steven Plunkett (ACHCS) to Mr. Jeffrey Rubin (Port of Oakland) dated September 30, 2008.

2. Groundwater Sampling Activities

Groundwater samples were collected from the Site by Malcolm Pirnie in December 2009 as part of the ACHCS-approved semi-annual groundwater monitoring program.

2.1. December 2009 Semi-annual Groundwater Monitoring Activities

Malcolm Pirnie conducted the 2009 second semi-annual groundwater monitoring event at the Site on December 8 and 9, 2009. The December 2009 groundwater monitoring event consisted of measuring the groundwater and free-phase product levels, when present, in the 10 groundwater monitoring wells on-site and collection of groundwater samples from the wells without free-phase product. The groundwater and free-phase product levels were measured to the nearest one-hundredth of a foot from top of well casing using a dual-phase interface probe. The dual-phase interface probe was decontaminated before each measurement by washing in a Liquinox solution followed by rinsing with water. Instrument readings indicated that there was a measurable amount of free-phase product in monitoring well MW-3 (Table 1); hence, this well were neither purged nor sampled. Field-measured groundwater quality information and water level measurements for the December 2009 monitoring events are provided on groundwater sampling forms included in Appendix A.

Malcolm Pirnie purged wells MW-1, MW-2, MW-4, MW-5, MW-8A, MW-9, MW-10, MW-11, and MW-12 using a peristaltic pump equipped with new disposable silicone and polyethylene tubing. During purging, Malcolm Pirnie monitored field water quality parameters (including temperature, pH, DO, oxidation/reduction potential (ORP), electrical conductivity, and turbidity) of the purge water using portable field instruments calibrated to manufacturer's specifications. Purging continued until water quality parameters had stabilized, extracting at least two well casing volumes per well when recharge rates permitted. Slow recharge at MW-2 allowed only one well casing volume to be purged. Field-measured groundwater quality information and water level measurements for the December 2009 monitoring event are provided on groundwater sampling forms included in Appendix A.

After purging, Malcolm Pirnie collected a groundwater sample directly into laboratory-supplied sample bottles using the peristaltic pump. Malcolm Pirnie collected a duplicate sample from monitoring well MW-4 (MW-4dup). Following sample collection, each sample bottle was labeled with a project name, date and time of collection, samplers' initials, and unique sample identification, and stored in a cooler containing ice. The groundwater samples were submitted to Curtis and Tompkins, Ltd. (C&T), a California-

certified analytical laboratory, under appropriate chain-of-custody procedures for the following analyses:

- TPHg in accordance with U.S. Environmental Protection Agency (USEPA) Method 8015B;
- TPHd and TPHmo in accordance with USEPA Method 8015B;
- BTEX and methyl tert-butyl ether (MTBE) in accordance with USEPA Method 8260B.

Prior to analyzing the water samples for TPHd and TPHmo, the samples was passed through a silica gel column, in accordance with USEPA Method 3630C, to remove non-petroleum-based organics that could potentially interfere with the analysis.

Under approval from ACHCS, well MW-4 has been outfitted with ORC socks to increase the DO concentration in groundwater and stimulate aerobic bio-degradation of the petroleum hydrocarbons reported in the groundwater at that location. The ORC socks installed during a previous monitoring event were removed on December 1, 2009, approximately one week prior to conducting the December sampling. At the time the ORC socks were removed, the DO level in the groundwater at MW-4 was measured at 0.69 mg/L, indicating the ORC socks had reached their useful lifespan.

Approximately 40 gallons of purge and decontamination water were generated during the December 2009 monitoring event. Malcolm Pirnie placed the water in properly labeled 55-gallon drums, which were stored in the free product recovery system enclosure located within Harbor Facilities Complex. The Port's environmental services contractor will dispose the water.

3. Results

The following section summarizes the field and laboratory results collected during the last six months of 2009.

3.1. Groundwater Flow Direction

Based on the depth-to-water measurements collected, groundwater beneath the Site dropped in elevation between June and December 2009. In June 2009, groundwater elevations ranged from 3.36 feet amsl to 5.88 feet amsl. In December 2009, groundwater elevation ranged from 2.85 feet amsl to 5.87 feet amsl. The groundwater flow direction at the time of the sampling event is calculated to be toward the north-northeast, except between MW-1 and MW-9, where it is north-northwest. Average gradients at the site range from 0.025 to 0.009 ft/ft. Shallow groundwater surface contour maps for the December 2009 event is illustrated on Figure 4. Current and historical depth-to-water measurements and calculated groundwater elevations are summarized in Table 1.

3.2. Product Thickness

Free-phase product was identified in monitoring well MW-3 during the groundwater monitoring event in December 2009. Product thickness in well MW-3 was 1.76 feet (Table 1), and has ranged in thickness from non-detectable to 2.70 feet since April 2000. Product was manually removed from MW-3 on a weekly basis between July 2009 and December 2009 using a peristaltic pump and placed in the 500-gallon concrete encased aboveground storage tank (Convault) located within the system enclosure.

3.3. Analytical Results

Analytical results for the groundwater samples collected in December 2009 are illustrated on Figure 5 and summarized in Table 1. The laboratory analytical reports are provided in Appendix B.

3.3.1. TPHg

The laboratory reported TPHg in the groundwater samples collected from MW-1, MW-9, MW-10, and MW-12, at concentrations ranging from 90 micrograms per liter ($\mu\text{g}/\text{L}$) to 1,400 $\mu\text{g}/\text{L}$. TPHg was not detected in the samples collected from wells MW-2, MW-4, MW-5, MW-8A, and MW-11. The laboratory report indicated that samples from MW-9, MW-10, and MW-11 exhibited a chromatographic pattern that does not match the gasoline standard. Chromatographs are included in the laboratory reports included in Appendix B.

3.3.2. BTEX and MTBE

The laboratory reported benzene in the groundwater samples collected from wells MW-1 (120 $\mu\text{g}/\text{L}$), MW-4 (3.3 $\mu\text{g}/\text{L}$), MW-9 (48 $\mu\text{g}/\text{L}$), and MW-10 (26 $\mu\text{g}/\text{L}$). Toluene was detected in the sample collected from well MW-1 at 2.9 $\mu\text{g}/\text{L}$. Ethylbenzene was detected in the samples collected from well MW-1 (1.8 $\mu\text{g}/\text{L}$) and MW-10 (0.8 $\mu\text{g}/\text{L}$). Xylenes were detected in the sample collected from well MW-1 at 3.0 $\mu\text{g}/\text{L}$. MTBE was detected in the sample collected from well MW-12 at 4.7 $\mu\text{g}/\text{L}$.

3.3.3. TPHd and TPHmo

The laboratory reported TPHd in the groundwater samples collected from wells MW-1, MW-9, MW-10, and MW-12, at concentrations ranging from 210 $\mu\text{g}/\text{L}$ to 1,200 $\mu\text{g}/\text{L}$. The laboratory reports indicate that the samples with TPHd detections exhibited a chromatographic pattern that does not match the diesel standard. The laboratory reported TPHmo concentrations to be below method reporting limits in the samples analyzed. TPHd chromatographs are included in the laboratory reports included as Appendix C.

3.4. ORC Use

On December 1, seven days before groundwater monitoring was performed at the Site, Malcolm Pirnie removed the ORC socks from well MW-4. The measurement of DO in the groundwater at well MW-4 at the time the ORC socks were removed indicated that they had reached their useful lifespan; thus, on December 8, 2009, following completion of the monitoring event, new ORC socks were placed in the well

3.5. Quality Assurance / Quality Control

Malcolm Pirnie collected a field duplicate from one monitoring well to assess representativeness of the sample collection procedures. Two samples from well MW-4 (MW-4 and MW-4Dup) were analyzed for TPHd, TPHg, BTEX and MTBE.

The analytical laboratory reported detectable concentrations of benzene in the sample and duplicate sample. The relative percent difference (RPD) between the original and the duplicate samples are calculated below:

$$\text{Benzene RPD } |3.3-3.5| / [(3.8+3.5)/2] = 5.5\%$$

The RPDs for these compounds are less than the analytical laboratory's allowable RPD for matrix spike duplicates and indicate that the field sampling procedures produce acceptable data.

C&T prepared a trip blank using deionized water as a water quality control sample. The trip blanks were stored in the coolers and accompanied groundwater samples from collection to transport to the laboratory. The laboratory reported that concentrations of the constituents of concern were below the method reporting limits for the analyses performed, indicating that the collection, preservation, storage, and analysis procedures did not compromise the sample integrity.

Malcolm Pirnie also reviewed the laboratory data for completeness and accuracy (see Quality Control Checklist in Appendix C). The project laboratory Quality Assurance / Quality Control (QA/QC) goals were met and qualification of the data is not necessary.

Based on the above QA/QC evaluation, Malcolm Pirnie considers the data collected during the 2009 second semi-annual monitoring event appropriate and reliable for its intended use.

4. Free Product Recovery System

The Port installed the free product recovery system at the Harbor Facilities Complex in 2004, as required by the ACHCS in a letter dated March 27, 2003. The free product recovery system includes nine recovery wells, RW-1 through RW-9 (Figure 3). Each recovery well is protected by a flush-mounted utility box. Utilities supplied to each recovery well include a pneumatic line for operation of a skimmer pump, a product discharge line, and a vacuum line. The Port operates six air-actuated skimmer pumps manufactured by Xitech Instruments, Inc. in the nine recovery wells. The placement of skimmer pumps depends on where free-phase product is detected. Historic field observations indicate that well RW-1 typically only contains a sheen, and free-phase product has not been observed historically in well RW-2. The remaining seven recovery wells do contain measureable amounts of free-phase product. Currently, wells RW-1, RW-2 and RW-5 are not outfitted with skimmer pumps. A programmable controller is used to set the frequency and duration that each skimmer pump operates. The skimmers discharge recovered product into the 500-gallon Convault located in the system enclosure. The Convault is equipped with primary and secondary containment, as well as a sensor that activates a warning light and shuts off air supply to the skimmers when the tank is full.

Malcolm Pirnie operated the system during the entire second semi-annual monitoring period in 2009. Typical Operation and Maintenance (O&M) tasks include weekly measurements of the product thickness in the recovery wells and confirming the position of the inlets of the recovery pumps in the wells. Pump inlet depths are adjusted as necessary to optimize recovery. In addition, pumps are checked for operation and filters are checked and changed as necessary. Weekly free-phase product thickness measurements and O&M activities are summarized in Table 3. The observed area of free-phase product is shown on Figure 5.

In June 2007, the free product recovery system was upgraded to include application of low vacuum on the wellheads to improve product recovery. Inducing a vacuum on the wellhead results in an air discharge containing petroleum vapors, which are treated by two vessels arranged in series each containing 1,000 pounds of vapor-phase granular activated carbon. Treatment and discharge conditions are provided in a Permit-to-Operate from the Bay Area Air Quality Management District.

Prior to enhancement of the free product recovery system with the installation of the low-vacuum blower, approximately 178 gallons of product were removed in 32 months (December 2004 through July 2007). After installation of the blower, 508 gallons of

Section 4
Free Product Recovery System

product has been recovered in 29 months (August 2007 through December 2009). A total of 686 gallons of product have been recovered since operation of the new free product recovery system began.

5. Conclusions

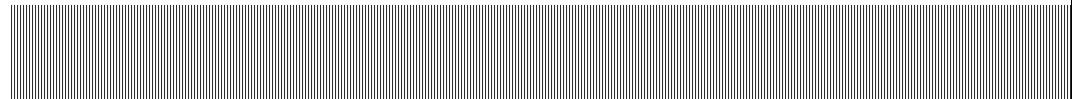

The results of the groundwater sampling and free product recovery system O&M tasks indicate that the free-phase product plume appears stable (Figure 5), and groundwater concentrations appear to be stable and/or decreasing (Table 2).

Notes:

Source of data prior to December 2005: Innovative Technical Solutions, Inc.*Third Quarter of 2005 Groundwater Monitoring and Product Monitoring Report*, 8 November 2005.

NP = no product detected with the interface probe

NC = not calculated due to the presence of free-phase product in the well

btc = below top of the well casing

NA = not available

NM = not measured

-- = no measurable product.

¹ Wells were resurveyed on January 24, 2009. Elevation data is relative to North American Vertical Datum of 1988 (NAVD 88).

² Well could not be measured due to abundant surface water covering well head.

³ Viscous product not related to the lighter product identified in other wells.

TABLE 2. Groundwater Analytical Results Summary
Port of Oakland's Harbor Facilities Complex Site
555 - 651 Maritime Street, Oakland, California

Monitoring Well	Date Sampled	Concentration ($\mu\text{g/L}$)							
		TPHg	TPHd	TPHmo	Benzene	Toluene	Ethyl-benzene	Total Xylenes	MTBE

Notes:

Data prior to December 2005 from *3rd Quarterly Groundwater Monitoring, and Product Recovery Report* dated

8 November 2005, by Innovative Technical Solutions, Inc.

$\mu\text{g/L}$ = micrograms per liter

Dup. = duplicate sample

NA = not analyzed

TPHg = total petroleum hydrocarbons as gasoline.

TPHd = total petroleum hydrocarbons as diesel fuel.

TPHmo = total petroleum hydrocarbons as motor oil.

MTBE = methyl tert-butyl ether

¹ Analyte found in the associated blank as well as in the sample.

² Hydrocarbons present do not match profile of laboratory standard.

³ Low boiling point/lighter hydrocarbons are present in the sample.

⁴ Chromatographic pattern matches known laboratory contaminant.

⁵ Hydrocarbons are present in the requested fuel quantification range, but do not resemble pattern of available fuel standard.

⁶ High boiling point/heavier hydrocarbons are present in sample.

⁷ Sample did not pass laboratory QA/QC and may be biased low.

⁸ Presence of this compound confirmed by second column, however, the confirmation concentration differed from the reported result by more than a factor of two.

⁹ Trip blank contained MTBE at a concentration of 4.2 $\mu\text{g/L}$.

¹⁰ MTBE detections confirmed by EPA Test Method 8260; 8260 results displayed.

¹¹ Sample exhibits unknown single peak or peaks.

¹² EPA Method 8260 confirmation analyzed past holding time.

¹³ Lighter hydrocarbons contributed to the quantitation.

¹⁴ MTBE results from EPA Test Method 8021B.

¹⁵ Sample exhibits fuel pattern that does not resemble standard.

¹⁶ Sample extracted out of hold time.

¹⁷ Presence confirmed, but Relative Percent Difference (RPD) between columns exceeds 40%.

¹⁸ Unmodified or weakly modified gasoline is significant.

¹⁹ Liquid sample contains greater than ~1 vol. % sediment.

²⁰ Gasoline compounds are significant.

²¹ Diesel range compounds are significant; no recognizable pattern.

²² Heavier hydrocarbons contributed to the quantitation.

Subject: RE: 4656016 - C&T Login Summary (217105)

Hi Tracy, sorry about the oversight. Yes, MW-12 should be analyzed for all 3 analyses (TPH-g, TPH-d/mo, and BTEX + MTBE). Please run the trip blank for BTEX + MTBE.

Thanks,
Lyda

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? ... YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? YES NO

4. Were custody papers filled out properly (ink, signed, etc)? YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation:

Type of ice used: Wet Blue/Gel None Temp(°C) 5.2, 5.8

Samples Received on ice & cold without a temperature blank

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES NO

If YES, what time were they transferred to freezer? _____

9. Did all bottles arrive unbroken/unopened? YES NO

10. Are samples in the appropriate containers for indicated tests? YES NO

11. Are sample labels present, in good condition and complete? YES NO

12. Do the sample labels agree with custody papers? YES NO

13. Was sufficient amount of sample sent for tests requested? YES NO

14. Are the samples appropriately preserved? YES NO N/A

15. Are bubbles > 6mm absent in VOA samples? YES NO N/A

16. Was the client contacted concerning this sample delivery? YES NO

If YES, Who was called? _____ By _____ Date: _____

COOLER RECEIPT CHECKLIST

Curtis & Tompkins, Ltd.

Login # 217143 Date Received 12-9 Number of coolers 1
Client Malcolm Pirnie Project Port HFC Semianual

Date Opened 12-9 By (print) Elias Tradit. (sign) Elias Tradit.
Date Logged in 12-9 By (print) M. Villanueva (sign) M. Villanueva

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? ... YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? YES NO

4. Were custody papers filled out properly (ink, signed, etc)? YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe)

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation:

Type of ice used: Wet Blue/Gel None Temp(°C) _____

Samples Received on ice & cold without a temperature blank

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? _____ YES NO

If YES, what time were they transferred to freezer? _____

9. Did all bottles arrive unbroken/unopened? _____ YES NO

10. Are samples in the appropriate containers for indicated tests? _____ YES NO

11. Are sample labels present, in good condition and complete? _____ YES NO

12. Do the sample labels agree with custody papers? _____ YES NO

13. Was sufficient amount of sample sent for tests requested? _____ YES NO

14. Are the samples appropriately preserved? _____ YES NO N/A

15. Are bubbles > 6mm absent in VOA samples? _____ YES NO N/A

16. Was the client contacted concerning this sample delivery? _____ YES NO

If YES, Who was called? _____ By _____ Date: _____

COMMENTS

~~Sample # 2: Received one empty, VOFET~~

Received 2 extra containers for sample #7 ET

Bromofluorobenzene	106	80-127

ND= Not Detected

RL= Reporting Limit

Batch QC Report
Purgeable Aromatics by GC/MS

Lab #:	217143	Location:	Port Of Oakland - HFC Semi Annual
Client:	Malcolm Pirnie, Inc.	Prep:	EPA 5030B
Project#:	4656016	Analysis:	EPA 8260B
Type:	BLANK	Diln Fac:	1.000
Lab ID:	QC525289	Batch#:	158175
Matrix:	Water	Analyzed:	12/13/09
Units:	ug/L		

Analyte	Result	RL
MTBE	ND	0.5
Benzene	ND	0.5
Toluene	ND	0.5
Ethylbenzene	ND	0.5
m,p-Xylenes	ND	0.5
o-Xylene	ND	0.5
