Danville, CA 94526  
Contact: Robert Kitay, Senior Geologist  
(925) 820-9391

### Agency Review

Mr. Jerry Wickham  
Alameda County Health Care Services Agency (ACHCSA)  
1131 Harbor Bay Parkway, Suite 250  
Alameda, CA 94502

Mr. Chuck Headlee  
California Regional Water Quality Control Board (RWQCB)  
San Francisco Bay Region  
1515 Clay Street, Suite 1400  
Oakland, CA 94612

The following is a report detailing the methods and findings of the August 23, 2006 quarterly groundwater sampling at the above-referenced site. This sampling was conducted as required by the ACHCSA and RWQCB. ASE has prepared this report on behalf of Mr. Nissan Saidian, owner of the property.

## 2.0 GROUNDWATER FLOW DIRECTION AND GRADIENT

On August 23, 2006, ASE measured the depth to water in monitoring wells MW-1 through MW-7 and MW-9 using an electric water level sounder. Monitoring well MW-8 was not accessible due to a truck parked over the well. The surface of the groundwater was also checked for the presence of free-phase hydrocarbons or sheen. Monitoring well MW-1 contained approximately 2.43-feet of free-phase hydrocarbons, a significant increase from last quarter's measurement. This product was subsequently bailed from the well until only a sheen was visible. Approximately one gallon of product, along with several gallons of water, were removed from the well and stored temporarily on-site in a 55-gallon, labeled drum. Groundwater elevation data is presented as Table One.

A groundwater potentiometric surface map for the August 23, 2006 sampling event is presented as Figure 2. The groundwater flow direction at the site has been inconsistent and highly variable. Groundwater flow beneath the site this quarter was generally to the north and west.

## 3.0 GROUNDWATER SAMPLE COLLECTION AND ANALYSIS

Groundwater samples were collected from monitoring wells MW-2 through MW-7 and MW-9. Monitoring well MW-1 contained free-phase hydrocarbons and was not sampled. Monitoring well MW-8 was not sampled due to a truck being parked over the well. Prior to sampling, the wells were purged of three well casing volumes of groundwater using disposable polyethylene bailers. The parameters pH, temperature, and conductivity were monitored during the well purging, and samples were not collected until these parameters stabilized. Groundwater samples were then collected from each well using the same polyethylene bailers.

All samples were decanted from the bottom of the bailers using low-flow sampling devices into 40-ml volatile organic analysis (VOA) vials, pre-preserved with hydrochloric acid, and sealed without headspace. The samples were then labeled and placed in coolers with wet ice for transport to Kiff Analytical, LLC of Davis, California (CA DHS ELAP #2236) under appropriate chain-of-custody documentation. Well sampling field logs are presented in Appendix A.

The monitoring well purge water was placed in a 55-gallon steel drum, and stored for later removal.

The groundwater samples were analyzed for total petroleum hydrocarbons as diesel (TPH-D) by modified EPA Method 8015, and total petroleum hydrocarbons as gasoline (TPH-G), benzene, toluene, ethylbenzene, and total xylenes (collectively known as BTEX), and oxygenates including ethanol and methanol by EPA Method 8260B. The analytical results are presented in Table Two. The certified analytical report and chain-of-custody documentation are included as Appendix B.

Aqua Science Engineers, Inc. 208 West El Pintado, Suite C, Danville, CA 94526  
(925) 820-9391 - Fax (925) 837-4853 - [www.aquascienceengineers.com](http://www.aquascienceengineers.com)

## 4.0 CONCLUSIONS

- Monitoring well MW-1 contained approximately 2.43-feet of free-phase hydrocarbons this quarter.
- Analytical results for groundwater samples collected from monitoring wells MW-2 and MW-4 are very similar to previous results, with the exception of TBA which increased this quarter.
- Hydrocarbon concentrations in groundwater samples collected from monitoring well MW-3 remained similar from the previous sampling except for a significant decrease in TPH-D concentrations.
- Hydrocarbon concentrations in groundwater samples collected from monitoring well MW-5 are very similar to previous results. However, there has been a decreasing trend in MTBE and increasing trend in TBA concentrations.
- There has generally been an increasing trend in hydrocarbon concentrations in monitoring well MW-6.
- Analytical results for groundwater samples collected from monitoring well MW-7 are very similar to previous results.
- There has generally been a decreasing trend in hydrocarbon concentrations in monitoring well MW-9.

Groundwater samples collected from the following monitoring wells contained concentrations of the listed compounds equal to or greater than Environmental Screening Levels (ESLs)<sup>1</sup>:

- MW-2—TPH-G
- MW-3—TPH-G, TPH-D, benzene and MTBE
- MW-6—TPH-G, TPH-D and benzene

## 5.0 RECOMMENDATIONS

ASE recommends that this site remain on a quarterly sampling schedule. The next sampling is scheduled for September 2006. Free-phase hydrocarbon removal from monitoring well MW-1 will continue during the next quarter. An additional soil and groundwater assessment will also take place in September and October 2006

## 6.0 REPORT LIMITATIONS

The results presented in this report represent conditions at the time of the groundwater sampling, at the specific locations where the groundwater samples were collected, and for the specific parameters analyzed by the laboratory. It does not fully characterize the site for contamination

---

<sup>1</sup> as presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region dated February 2005

Aqua Science Engineers, Inc. 208 West El Pintado, Suite C, Danville, CA 94526

resulting from sources other than the former underground storage tanks and associated plumbing at the site, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of independent CAL-DHS certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the chemical analysis data.

Aqua Science Engineers appreciates the opportunity to provide environmental consulting services for this project, and trust that this report meets your needs. Please feel free to call us at (925) 820-9391 if you have any questions or comments.

**Notes:**

Mid Coast Engineers (MCE) surveyed all site monitoring wells on July 11, 2002 to mean sea level (MSL). The updated elevation data is reflected in the table above.

\* = Groundwater elevation adjusted for the presence of free-floating hydrocarbons by the equation: Adjusted groundwater elevation = Top of casing elevation - depth to groundwater + (0.8 x free-floating hydrocarbon thickness)

\*\* = Top of casing elevation has changed and well has not been resurveyed.

\*\*\* = Product was bailed by OTS staff prior to measurement by ASE.

NM = Not Measured

## **APPENDIX B**

Certified Analytical Report  
and  
Chain of Custody Documentation

Report Number : 51881

Date : 9/12/2006

Mike Rauser  
Aqua Science Engineers, Inc.  
208 West El Pintado Rd.  
Danville, CA 94526

Subject : 7 Water Samples  
Project Name : OTS  
Project Number : 3540

Dear Mr. Rauser,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink, appearing to read "Joel Kiff".

Joel Kiff

## Case Narrative

The Method Reporting Limit for Methanol has been increased due to the presence of an interfering compound for samples MW-2 and MW-6.

The Method Reporting Limit for TPH as Diesel is increased due to interference from Gasoline-Range Hydrocarbons for samples MW-2 and MW-6.
