RE: SEMIANNUAL GROUNDWATER MONITORING REPORT
FOURTH QUARTER 2012

Dear Mr. Karvelot:

This *Fourth Quarter 2012 Semiannual Groundwater Monitoring Report* presents the results of the Fourth Quarter 2012 fluid level monitoring and groundwater sampling at the above-referenced site (Figure 1). The work at the Site was performed in accordance with the requirements of the Alameda County Health Care Services Agency, Department of Environmental Health (ACDEH).

1.0 FLUID-LEVEL MONITORING AND GROUNDWATER FLOW PATTERNS

Fluid levels were measured in onsite monitoring wells MW-1, MW-2, and MW-3, and offsite monitoring wells MW-4, MW-5, MW-6 and MW-7 on December 4, 2012. Refer to Table 1 for fluid-level monitoring data, and to Figure 2 for a groundwater elevation contour map based on the fluid-level measurements. A description of fluid-level monitoring procedures is included in the Appendix.

Groundwater elevations range between 122.31 feet above mean sea level (MSL) in MW-6 at the south end of the study area to 131.47 feet above MSL in MW-3 in the north, with an average elevation of 127.22 feet above MSL. Groundwater flow direction was predominantly to the southwest at a gradient of 0.06 feet per foot in the northern portion of the study area, and approximately 0.041 feet per foot over the entire extent of the well network (i.e., extending to MW-6 at the southern end of the study area). Surface topography is generally steeper at the north end of the study area (near Site) than at the south end (near MW-6), which could explain the gentler gradient in the south relative to that in the northern portion of the study area.

2.0 GROUNDWATER SAMPLING

2.1 Field Sampling and Analytical Testing

On December 4, 2012, groundwater samples were collected from onsite wells MW-1, MW-2, and MW-3, and offsite monitoring wells MW-4, MW-5, MW-6 and MW-7. Approximately 110 gallons of purge water and equipment rinsate were generated during groundwater sampling activities conducted on December 4, 2012. The purge water was stored onsite in two Department of Transportation-approved 55-gallon drums pending disposal. General Field Procedures, Field Measurement Forms, Official Laboratory Reports, and Chain of Custody Records are included in the Appendix. Groundwater samples were submitted to a state-certified laboratory for analysis of the following constituents:

- Total petroleum hydrocarbons as gasoline (TPH-G) by EPA Method SW8015B
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX) by EPA Method SW8260B.
- Fuel Oxygenates by EPA Method 8260B, including:
 - Methyl tert-butyl ether (MTBE)
 - Tertiary butyl alcohol (TBA)
 - Di-isopropyl ether (DIPE)
 - Ethyl tertiary butyl ether (ETBE)
 - Tertiary amyl methyl ether (TAME)
- Ethanol by EPA Method SW8260B-DI.

2.2 Analytical Results

Fourth Quarter 2012 groundwater analytical results are summarized in Table 1 and Figure 3. TPH-G concentrations reported during this event ranged from non-detect (<50 micrograms per liter [$\mu\text{g/L}$]) to 460 $\mu\text{g/L}$ (MW-4). MTBE concentrations ranged from non-detect (<0.50 $\mu\text{g/L}$) to 120 $\mu\text{g/L}$ (MW-7), and TBA concentrations ranged from non-detect (<10 $\mu\text{g/L}$) to 400 $\mu\text{g/L}$ (MW-4) during this sampling event. Total xylenes were detected in MW-4 at 0.90 $\mu\text{g/L}$. No other analytes were detected above their respective reporting limits.

2.3 Discussion

The Fourth Quarter 2012 monitoring event represents the tenth monitoring with the expanded well network (i.e., including offsite wells MW-4 through MW-7), and is also the tenth monitoring event to include the analysis of dissolved phase TBA, DIPE, ETBE and TAME. In general, the results are consistent with those from historic sampling events and the previous Second Quarter 2012 monitoring event.

The presence of a detectable level of TPH-G was reported in the southern and western (downgradient) offsite areas, in wells MW-4 and MW-7. TBA was also detected in both downgradient wells MW-1 and MW-4 located immediately beyond the southern Site perimeter.

SEMIANNUAL GROUNDWATER MONITORING REPORT, FOURTH QUARTER 2012

Quik Stop Market No 56-3132 Beaumont Avenue, Oakland, California

January 31, 2013

Page 3

MTBE was detected in five of the seven groundwater samples analyzed (i.e., except for MW-3 and MW-5). The maximum concentration of MTBE was reported in MW-7 at a concentration of 120 µg/L.

Overall diminishing trends are apparent for TPH-G in wells where detectable levels have been historically reported (i.e., downgradient, near Site wells MW-1, MW-4), with the exception of MW-7 where TPH-G was detected for the first time during 2nd Quarter 2012 and was again detected in 4th Quarter 2012. Similarly diminishing trends are apparent for MTBE in wells where highest detectable levels have historically been reported (e.g., MW-1), and for TBA (in MW-1, MW-4).

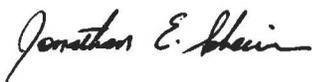

As concluded in the Site Conceptual Model, the lateral extent of impacts to shallow groundwater has been defined, and the well network is deemed adequate (TRC, 2011). Pursuant to a request by the ACDEH dated June 23, 2011, the vertical extent of groundwater impacts was evaluated and defined during the Additional Soil and Groundwater Investigation, completed in December 2011 (TRC, January 2012).

3.0 LIST OF ATTACHMENTS

- Figure 1: Vicinity Map
- Figure 2: Groundwater Elevation Contour Map, December 4, 2012
- Figure 3: Dissolved-Phase Constituent Concentrations, December 4, 2012
- Table 1: Summary of Groundwater Levels and Chemical Analysis
- Appendix: General Field Procedures, Field Measurement Forms, Official Laboratory Reports, and Chain of Custody Records

NOTES:

ft-MSL = feet above mean sea level	MTBE = methyl tert butyl ether
µg/L = micrograms per liter	TBA = tertiary butyl alcohol
mg/L = milligrams per liter	DIPE = di-isopropyl ether
TPH-G = total petroleum hydrocarbons as gasoline	ETBE = ethyl tertiary butyl ether
DO = dissolved oxygen	TAME = tertiary amyl methyl ether
< = not detected at or above the stated detection limit	

APPENDIX

**GENERAL FIELD PROCEDURES, FIELD MEASUREMENT FORMS, OFFICIAL
LABORATORY REPORTS, AND CHAIN OF CUSTODY RECORDS**

GENERAL FIELD PROCEDURES

General field procedures used during fluid-level monitoring and groundwater sampling activities are described below.

FLUID-LEVEL MONITORING

Fluid levels are monitored in the wells using an electronic interface probe with conductance sensors. The presence of liquid-phase hydrocarbons is verified using a hydrocarbon-reactive paste. The depth to liquid-phase hydrocarbons and water is measured relative to the well box top or top of casing. Well box or casing elevations are surveyed to within 0.02 foot relative to a county or city benchmark.

GROUNDWATER SAMPLING

Groundwater monitoring wells are purged and sampled in accordance with standard regulatory protocol. Typically, monitoring wells that contain no liquid-phase hydrocarbons are purged of groundwater prior to sampling so that fluids sampled are representative of fluids within the formation. Temperature, pH, and specific conductance are typically measured after each well casing volume has been removed. Purging is considered complete when these parameters vary less than 10% from the previous readings, or when four casing volumes of fluid have been removed. Samples are collected without further purging if the well does not recharge within 2 hours to 80% of its volume before purging.

The purged water is stored in labeled drums prior to transport to an appropriate treatment or recycling facility. If an automatic recovery system (ARS) is operating at the site, purged water may be pumped into the ARS for treatment.

Groundwater samples are collected by lowering a 1.5-inch-diameter, bottom-fill, disposable polyethylene bailer just below the static water level in the well. The samples are carefully transferred from the check-valve-equipped bailer to 1-liter and 40-milliliter glass containers. The sample containers are filled to zero headspace and fitted with Teflon-sealed caps. Each sample is labeled with the project number, well number, sample date, and sampler's initials. Samples remain chilled at approximately 4°C prior to analysis by a state-certified laboratory.

Alpha Analytical, Inc. certifies that the test results meet all requirements of NELAC unless footnoted otherwise.

Statement of Data Authenticity: Alpha Analytical, Inc. attests that the data reported has not been altered in any way.

Alpha Analytical, Inc. currently holds appropriate and available California (#2019) and NELAC (01154CA) certifications for the data reported. Test results relate only to reported samples.

QC Summary Report

Date:
17-Dec-12

Work Order:
12120544

Comments:

Calculations are based off of raw (non-rounded) data. However, for reporting purposes, all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.
