SUBJECT: TANK CLOSURE REPORT  
327 - 34th Street  
Oakland, California

---

Ms. Chew,

Enclosed you will find a copy of the Tank Closure Report from KTW & Associates for the property at 327 - 34th Street, Oakland, California.

Please feel free to call me at (510) 450-6608, if you have any questions.

Cal. State Cont. Lic. #572427

August 30, 1993

Mr. Ron Tye  
Val Strough Chevrolet  
3330 Broadway  
Oakland, California 94611

Mr.Tye:

K.T.W. & Associates, Inc. is pleased to submit this report describing closure activities associated with the removal of two underground storage tanks in Oakland, California. This report provides basic information regarding the site work. The tank removals were performed by Subsurface Environmental Corporation, 11072 San Palo Avenue, Suite 315, El Cerrito, California 94530. Any additional information may be obtained from Roxanne Harris @ (510) 215-6553.

### **Site Description**

The site is located at 327 34th Street, Oakland, California. A site location map is presented in Plate 1. One 550 gallon waste oil tank and one 1,000 gallon gasoline tank was formerly at the subject site. A site map showing the location of the site structures, and the former underground tank is presented in Plate 2.

### **Closure Plan and Permitting**

A closure plan and permit application from Alameda County Water District for removal of the underground tanks was submitted.

### **Underground Tank Closure**

Tank removal activities began on March 4, 1993. Inspector Eva Chu, from the Alameda County, Department of Environmental Health was present to observe the tank removal and sampling activities. Construction and documentation services associated with the closure were performed by Subsurface Environmental. Sampling activities were performed by Ms. Roxanne Harris, of Subsurface Environmental. Per information provided by Mr. Terry Williamson of Kip Prahl, upon removal there were visible signs of structural failure evident with some holes. Additionally, there was noticeable soil staining in the waste oil tank and gasoline tank excavations as well as a detectable odors in the gasoline tank excavation.

Mr. Ron Tye  
August 30, 1993  
Page 2

### **Soil Sampling & MVA for Underground Fuel Tank Excavation**

Soil sampling of the tank excavation and stockpile occurred on March 5, 1993. Eight (8) soil samples were collected; one (TA001) from beneath the west end of the gasoline tank excavation at a depth of 11' below grade, one (TA002) from beneath the east end of the gasoline tank excavation at a depth of 10.5' below grade. One (TB003) from beneath the west end of the waste oil tank at a depth of 9.5' below grade, one from beneath the east end of the waste oil tank at a depth of 9.5' below grade, and a 1-4 composite sample (SP005) from the stockpile which was to be held. The soil samples from the tank excavation were obtained by driving a brass tube into the soil extracted from the excavation using a backhoe. The composite soil samples were obtained by driving a brass tube into the stockpiled material. The sample locations are noted on Plate 2.

All soil samples were collected in precleaned brass tubes, sealed with foil and plastic caps and promptly stored on dry ice in a cooler. Following completion of field work on March 5, 1993, the soil samples were submitted to Curtis & Tompkins, Ltd., 2323 Fifth Street, Berkeley, California (DOHS #1459) under appropriate chain of custody documentation.

The samples collected for minimum verification analyses (MVA) were analyzed in accordance with appropriate regulatory guidelines contained within Regional Board Staff Recommendations for Initial Evaluation and Investigation of Underground Tanks (RWQCB, 1988).

### **Certified Analytical Results**

The soil samples were analyzed for Total Petroleum Hydrocarbons as Gasoline (TPH-G), Benzene, Toluene, Total Xylenes, and Ethylbenzene (BTXE), Total Petroleum Hydrocarbons as Diesel, Hydrocarbon Oil & Grease, Chlorinated Hydrocarbons and 5 Metals (Cadmium, Chromium, Lead, Nickel, and Zinc). Sample TA001 taken from the bottom of the gasoline excavation indicated 5 parts per million (ppm) TPH-G, N.D. ppm Benzene, 110 ppm Toluene, 480 ppm Ethylbenzene, 280 ppm Total Xylenes. Sample TA002 also taken from the gasoline tank excavation showed 130 ppm TPH-G, N.D. ppm Benzene, 200 ppm Toluene, 4,900 ppm Ethylbenzene and 7,800 ppm Total Xylenes.

Sample TB003 taken from the waste oil excavation showed N.D. for TPH-G, Benzene, Cadmium, Volatile Halocarbons and Hydrocarbon Oil & Grease. It also showed 5 ppm Toluene, 14 ppm Ethylbenzene, 18 ppm Total Xylenes, 96 ppm TPH-D, 49 ppm Chromium, 75 ppm Nickel, 8 ppm Lead and 160 ppm Zinc.

Sample TB004 showed N.D. for TPH-G, Benzene, Toluene, Ethylbenzene, Total Xylenes, Cadmium, Lead, Volatile Halocarbons, and Hydrocarbon Oil & Grease.

Mr. Ron Tye  
August 30, 1993  
Page 3

It also showed 7 ppm TPH-D, 39 ppm Chromium, 65 ppm Nickel, and 22 ppm Zinc. The results from the samples are combined in Table I. Copies of soil analytical results are presented in Attachment A.

### **Regulatory Guidelines**

The Regional Water Quality Control Board - San Francisco Bay Region has established a level of 100 ppm TPH concentrations in soil as a general decision value for requiring further definition of site soil and groundwater contamination where shallow groundwater conditions are known to exist. The origin of the 100 ppm level was to "develop a method to prioritize the case load and indicate whether a significant volume of fuel had been released or discharged" (RWQCB, June, 1988).

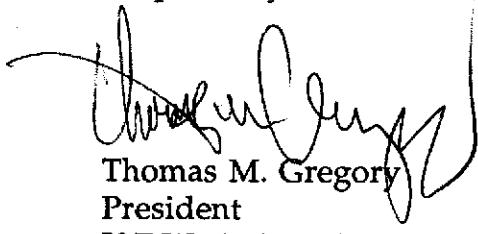

Copies of this report should be submitted to:

Alameda County Health Care Services Agency  
80 Swan Way, Room 200  
Oakland, California 94621  
Attn: Ms. Eva Chew

Additional copies of this report have been provided for the purpose of regulatory submittal.

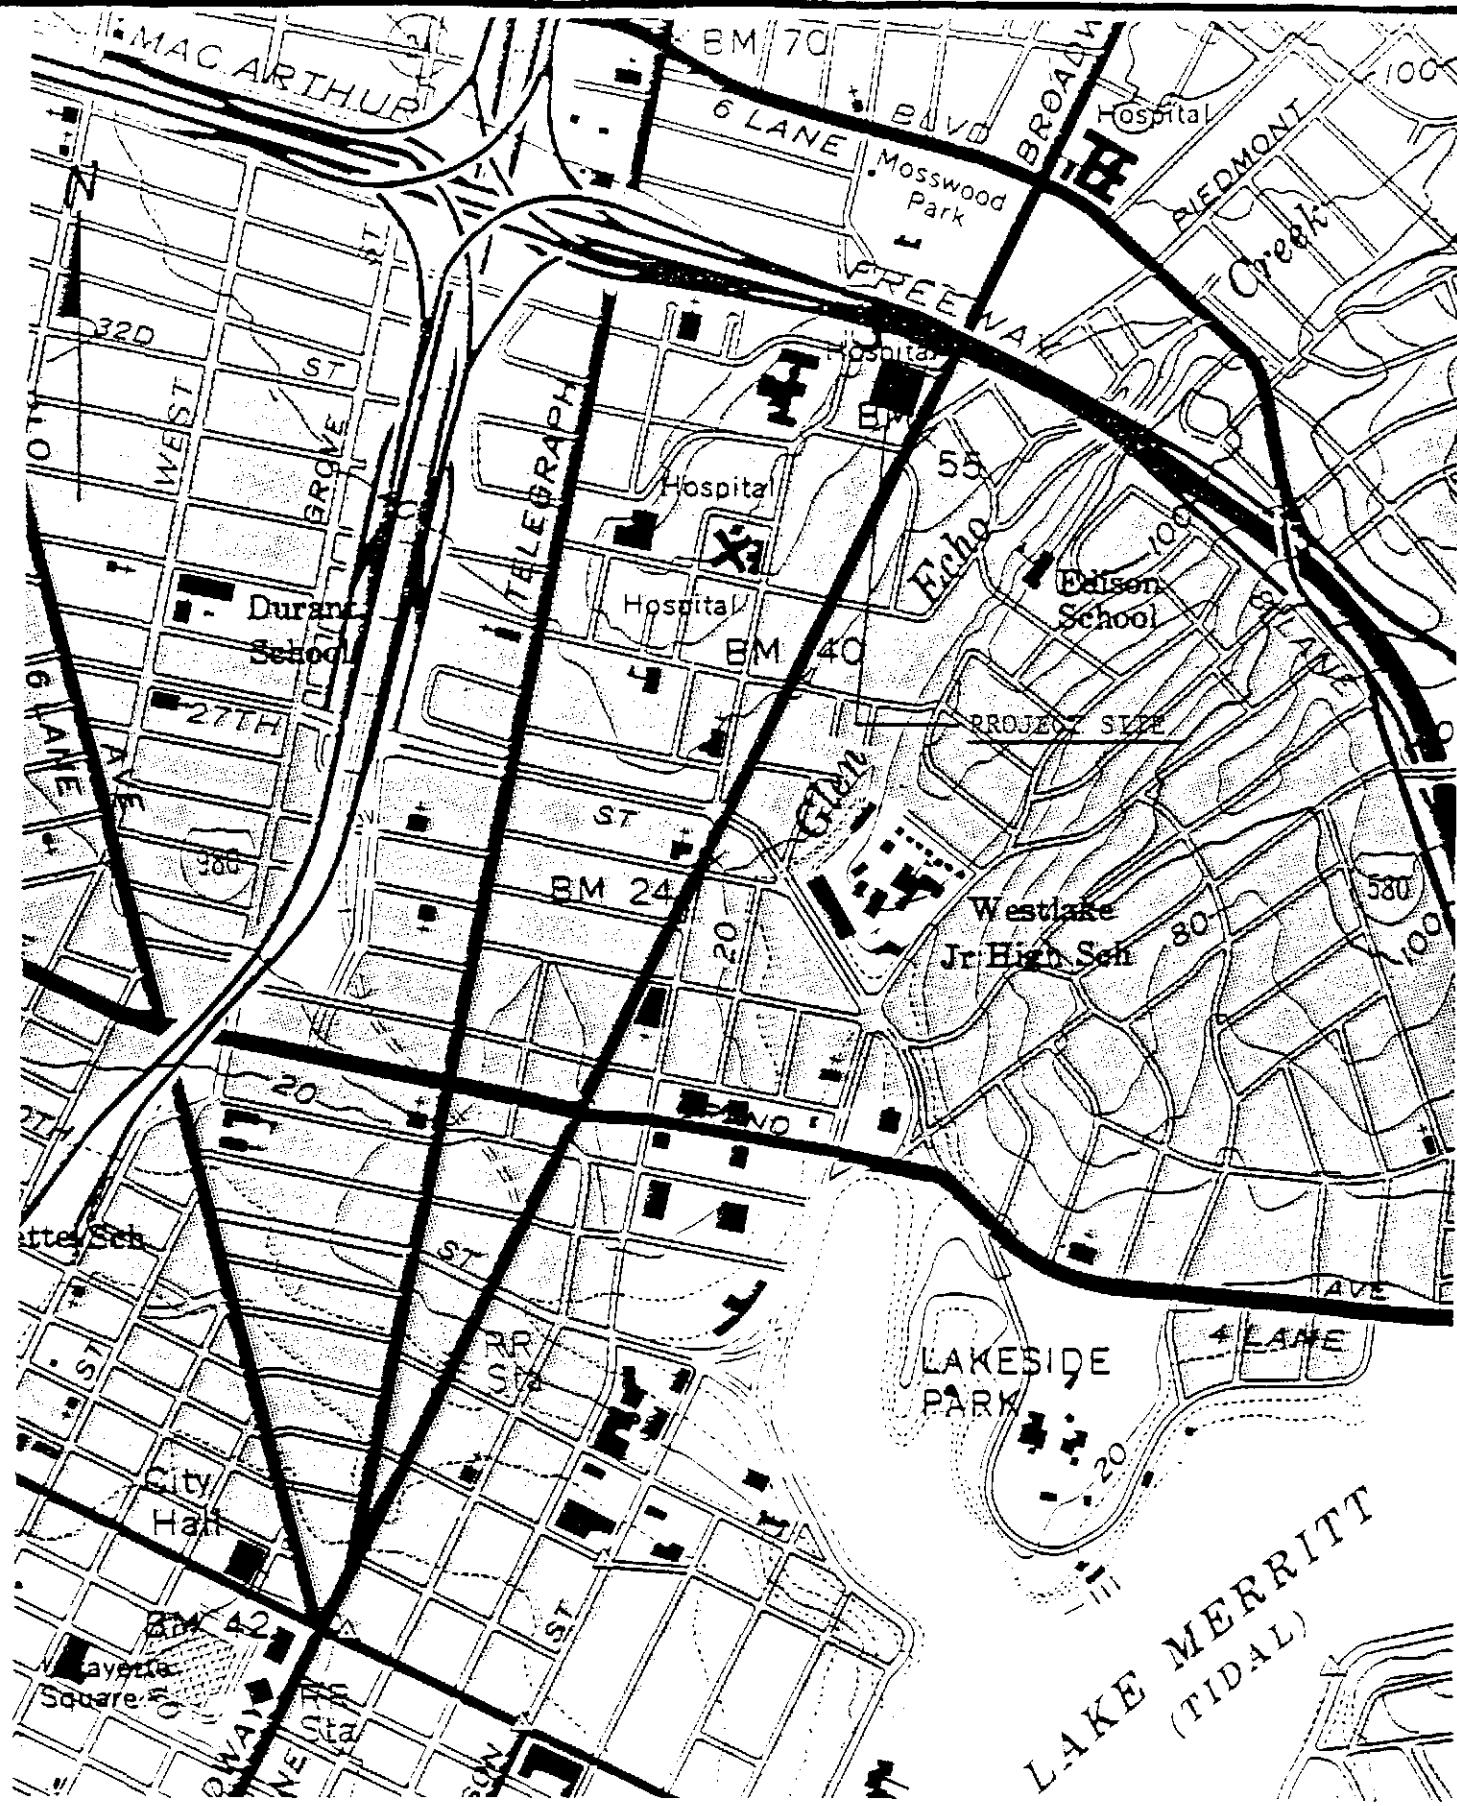

Should you have any questions or comments regarding the evaluations presented in this report, please call.

Respectfully,

Thomas M. Gregory  
President  
K.T.W. & Associates, Inc.

EPA 8010 Compound List by EPA 8240  
 Volatile Halocarbons in Soil & Water

## Compound

Compound	RESULT ug/Kg	REPORTING LIMIT ug/Kg
Chloromethane	ND	10
Bromomethane	ND	10
Vinyl chloride	ND	10
Chloroethane	ND	10
Methylene chloride	ND	10
Trichlorofluoromethane	ND	20
1,1-Dichloroethene	ND	5
1,1-Dichloroethane	ND	5
cis-1,2-Dichloroethene	ND	5
trans-1,2-Dichloroethene	ND	5
Chloroform	ND	5
Freon 113	ND	5
1,2-Dichloroethane	ND	5
1,1,1-Trichloroethane	ND	5
Carbon tetrachloride	ND	5
Bromodichloromethane	ND	5
1,2-Dichloropropane	ND	5
cis-1,3-Dichloropropene	ND	5
Trichloroethene	ND	5
1,1,2-Trichloroethane	ND	5
trans-1,3-Dichloropropene	ND	5
Dibromochloromethane	ND	5
Bromoform	ND	5
Tetrachloroethylene	ND	5
1,1,2,2-Tetrachloroethane	ND	5
Chlorobenzene	ND	5
1,3-Dichlorobenzene	ND	5
1,2-Dichlorobenzene	ND	5
1,4-Dichlorobenzene	ND	5

ND = Not detected at or above reporting limit.

## QA/QC SUMMARY: SURROGATE RECOVERIES

1,2-Dichloroethane-d4

107 %

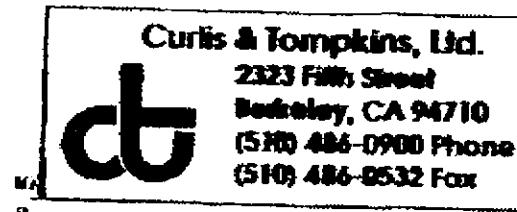

103 %

100 %

Toluene-d8

Bromofluorobenzene

## CHAIN OF CUSTODY FORM
