Subject: Supplemental Site Investigation Workplan
Val Strough Chevrolet
327-34th Street
Oakland, California

Dear Mr. Strough:

ETIC Engineering, Inc. (ETIC) is pleased to submit the *Supplemental Site Investigation Workplan* for the above-subject site in response to the request from the Alameda County Health Care Services Agency in a letter dated 18 July 2003. The workplan includes ETIC's proposed site investigation to address the comments by ACHCSA dealing with additional data to support characterization of the source area and groundwater contaminant plume. In addition, the workplan includes the results of the preferential pathway survey and our strategy for source cleanup.

ETIC appreciates the opportunity to provide the Strough Family Trust with environmental consulting services. If you have any questions or comments, please contact me at (510) 208-1600, extension 16.

Sincerely,
ETIC Engineering, Inc.

A handwritten signature in black ink, appearing to read "Luis A. Fraticelli".

Luis A. Fraticelli, R.G.

1.0 INTRODUCTION

At the request of Strough Family Trust of 1983, ETIC Engineering, Inc. (ETIC) has prepared this soil and groundwater investigation work plan for Fuel Leak Case No. RO0000134 (Val Strough Chevrolet), located at 327-34th Street, Oakland, California (Figure 1). This work plan was prepared in response to a request from the Alameda County Health Care Services Agency (ACHCSA) in a letter to Don Strough dated 18 July 2003. The letter is included as Appendix A.

The Workplan is organized as follows:

- Section 1 – Introduction
- Section 2 – Site Background
- Section 3 – Investigation Workplan
- Section 4 – Preferential Pathway Survey
- Section 5 – Source Cleanup

Scope of Work

This work plan addresses the following items as requested in the 15 July 2003 letter from the ACHCSA:

1. **Site Characterization:** The lateral and vertical extent of the dissolved plume is undefined for petroleum fuel products, methyl tertiary butyl ether (MTBE) and fuel oxygenates at the site. ETIC has prepared an investigation workplan to address this issue as detailed in Section 3.1.1.
2. **Source Characterization:** The source area has not been delineated in the lateral or vertical extent. ETIC's proposed work for contaminant source characterization is detailed in Section 3.1.2.
3. **Preferential Pathway Survey:** Potential migration pathways and conduits (i.e. wells, utilities, pipeline, etc) for horizontal and vertical migration require evaluation. ETIC conducted a conduit study to identify potential migration pathways and conduits for hydrocarbons and fuel oxygenates. Details of the conduit study are presented in Section 4.0.
4. **Historical Hydraulic Gradients:** The gradient and flow direction have not been presented as a rose diagram or in the monitoring reports. ETIC has prepared a rose diagram and current groundwater flow direction figure in this workplan. A summary of local hydrogeology and groundwater flow conditions, as known to date, is detailed in Section 2.
5. **Underground Storage Tank (UST) Unauthorized Release (Leak)/Contamination Site Report:** Complete UST leak report. ETIC will research the project file for a completed UST leak report and provide this information to the ACHCSA.

6. Groundwater Monitoring Frequency: Quarterly groundwater monitoring is requested. ETIC proposes to monitor groundwater quality at the site on a quarterly basis for a one-year period. The frequency of monitoring will be further evaluated at that time.
7. Groundwater Analysis: Groundwater quality analysis has not included fuel oxygenates or additives during previous rounds of sampling. ETIC proposes to perform a single round of the requested additional groundwater and soil analyses for fuel oxygenates. The results of these samples will be evaluated to determine whether additional fuel oxygenates analyses will be necessary.
8. Source Cleanup Required: Soil contamination in the source area appears to be contributing to the elevated concentrations in groundwater. As indicated in Section 5, following the proposed investigation outlined herein, ETIC will evaluate relevant and potentially applicable remedial technologies to remove/reduce hydrocarbon mass in soil. Reduction of hydrocarbon mass in soil is expected to reduce future groundwater concentrations.

2.0 SITE BACKGROUND

2.1 SITE LOCATION AND LAND USE

Val Strough Chevrolet is an active automobile dealership and service center located at 327-34th Street, Oakland, California on the southwest corner of the intersection of Broadway (Auto Row) and 34th Street (Figure 1). The property is located south of Interstate 580. Land use in the area is primarily mixed commercial.

The site topography has a gentle grade toward the south. The site is located in the San Francisco Bay area, approximately 2 miles east of the San Francisco Bay. The nearest surface water body is Lake Merritt, which is located approximately one mile south of the site.

2.2 SITE HISTORY AND PREVIOUS INVESTIGATIONS

A gasoline UST was installed in 1975 and a waste oil UST had been present onsite since 1949. Between 4 and 5 March 1993, the two 1,000-gallon USTs containing unleaded gasoline and waste oil were excavated and removed from the site. The chemicals of potential concern (COPCs) at the site include total petroleum hydrocarbons (TPH) as gasoline (TPH-g); TPH as diesel (TPH-d); TPH as motor oil (TPH-mo); benzene, toluene, ethylbenzene, and total xylenes (BTEX); the fuel oxygenates MTBE, t-Butanol (TBA), di-isopropyl ether (DIPE), ethyl t-butyl ether (ETBE), and t-amyl methyl ether (TAME); and the fuel additives ethylene dibromide (EDB) and 1,2-dichloroethane (1,2-DCA). Confirmation soil samples were collected at the bottom of each end of the UST excavations, at approximately 9.5 to 11 ft below ground surface (bgs). Soil samples beneath the gasoline UST contained TPH-g at 130 mg/kg, toluene at 200 ug/kg, ethyl-benzene at 4,900 ug/kg, and xylenes at 7,800 ug/kg. The COPCs were not detected in soil samples beneath the waste oil UST.

In July 1993, GeoPlexes, Inc installed three groundwater monitoring wells (MW1-MW3) downgradient of the USTs (See Table 1 for construction details). Soil and groundwater quality data are summarized in Tables 2 and 3. MW1 is located southeast, approximately 10 feet from the waste oil UST. MW2 is located approximately 15 feet south and downgradient of the gasoline UST. MW3 is located downgradient from MW2 and the two USTs (approximately 40 feet south of the USTs). Figure 2 shows the monitoring well locations.

Soil samples collected from each of the monitoring wells (MW1-MW3) were submitted to a state-certified laboratory for analysis. Soil samples from MW1 were below laboratory detection limits for the COPCs. Soil samples from MW2 contained elevated TPH and BTEX concentration values. Soil samples from boring MW3 (downgradient of MW2) contained TPH detection, which were not further quantified by the laboratory in the heavy gasoline/or aged gasoline. TPH-g and benzene were detected in the capillary zone soils and in soils beneath the water table. Upon

completion of MW3, approximately ¼ -inch of floating liquid phase hydrocarbons (LPHs) was observed in this well. The LPH was determined to consist of gasoline-range hydrocarbons.

In June 1998, two additional groundwater monitoring wells (MW4 and MW5) and one soil boring (B-6) were installed to further characterize the lateral extent of the TPH plume. The monitoring wells were completed to a total depth of 31 feet bgs and B-6 was advanced to 26 feet bgs. Analytical results for the COPCs were not detected, except trace benzene levels in MW4 (0.045 ppb). All five monitoring wells were sampled and tested (See Table 3).

In July 2000, two additional groundwater monitoring wells (MW6 and MW7) were installed downgradient of the plume on the east and west sides of a box culvert in the eastern portion of the site. The below-ground surface box culvert (Former Tributary of Glen Echo Creek) in the east side of the site (below parking lot area) was also investigated in July 2000. The box culvert transecting the site is a re-enforced concrete box measuring 5 feet by 6 feet. The total depth of the concrete box is approximately 17 feet bgs. A cave-in occurred along the box culvert alignment during winter 1983. The caved-in section of the culvert was replaced and lined with a 5-foot diameter pipe. The flow-line in the culvert at the time was 22.5 feet bgs.

2.3 REGIONAL GEOLOGY AND HYDROGEOLOGY

The area is underlain by the Quaternary Temescal Formation, which consists of interfingering layers of clayey gravel, sandy silty clay, and various clay-silt-sand mixtures. The formation varies in thickness to a maximum depth of approximately 60 feet. Underlying the Temescal Formation is the Quaternary Alameda Formation, which consists of unconsolidated continental and marine gravels, sands, silts, and clays, with some shells and organic material in various places. The formation has a maximum known thickness of 1,050 feet (Radbruck, 1957). The site has an elevation of approximately 61 feet above mean sea level (Environmental Data Resources, Inc., 2003).

The site is located in the East Bay Plain Groundwater Basin. Flow of groundwater is to the west, in the general direction of the San Francisco Bay (RWQCB, 1995). A current groundwater elevation contour map (with rose diagram) is presented as Figure 3.

2.4 SITE AND VICINITY GEOLOGY AND HYDROGEOLOGY

The geology and hydrogeology of the site have been evaluated using soil boring logs from previous investigations at the site. The soil boring logs were used to develop geologic cross-sections. The locations of the geologic cross-sections are shown on Figure 2 and geologic cross-sections A-A' and B-B' are presented as Figures 4 and 5, respectively. In general, the lithology at the site consists of silty clays, sandy clays, or clays from the surface to depths ranging from 20 to 22 feet bgs. Silty Sand has been encountered from approximately 26 feet bgs to the total depth explored in borings

MW1 through MW4 (i.e. approximately 31 feet bgs.). Sandy clay has been observed in MW2 at approximately 45 feet bgs. The total depth explored to date beneath the site is 34 feet bgs.

In June 2003, groundwater occurred at an average depth of 19.79 feet bgs. Figure 3 depicts a rose diagram showing recent flow directions for the shallow water-bearing zone beneath the site. As shown in the rose diagram, the prevailing groundwater flow direction has been toward the southwest, with an average hydraulic gradient of approximately 0.03 foot/foot. The rose diagram was prepared using groundwater monitoring data from July 1993 through June 2003 (In June 2003, gauging took place without sampling). Historical and current groundwater monitoring data are presented in Table 3.

3.0 INVESTIGATION WORKPLAN

3.1 PROPOSED INVESTIGATION

The proposed soil and groundwater investigation is designed to evaluate the lateral and vertical extent of TPH and MTBE-impacted soil and groundwater beneath the site. The TPH/MTBE groundwater plume is currently being monitored by seven onsite monitoring wells. The proposed investigation focuses on delineating the limits of the impacted soil in the former source/release area near the former USTs, and on delineation of the TPH/MTBE groundwater plume downgradient from the suspected source area.

3.1.1 Site Characterization

Three hydropunch borings are proposed to evaluate the extent of TPH/MTBE groundwater plume beneath the site. The proposed locations of the hydropunch borings are shown on Figure 2. The rationale for the locations and a description of the proposed activities are discussed below:

- Advance one hydropunch boring downgradient of MW6. Based on the detection of MTBE in MW6 (170 ug/L) and the direction of groundwater flow beneath the southeastern portion of the site, ETIC proposes to advance one hydropunch boring at this location (downgradient of MW6- see Figure 2) to evaluate the southeastern extent of the plume and potential migration of dissolved chemicals along the culvert.
- Advance one hydropunch boring between MW5 and MW6 (see Figure 2). The purpose of this hydropunch location is to collect groundwater data in an area which is downgradient of the source area and where no groundwater data have been collected to date.
- Advance one hydropunch boring southwest of the former release/source area (see Figure 2). The purpose of this hydropunch is to collect data in the predominant downgradient groundwater flow direction away from the former USTs. Figure 3 depicts the June 2003 groundwater elevation data and a rose diagram with groundwater flow direction from the past 10 years.
- The hydropunch borings will be advanced onsite to approximate depths of 25 feet bgs using a limited-access direct push rig. A groundwater sample will be collected from each hydropunch.
- Groundwater samples will be analyzed for TPH-g, TPH-d, and TPH-mo by Cal EPA-modified EPA Method 8015; BTEX, MTBE, TBA, DIPE, ETBE, TAME, EDB, and 1, 2-DCA by EPA Method 8260B.

Data collected from the hydropunch borings will be evaluated and used in determining the need, if any, and locations of additional monitoring well locations at the site.

3.1.2 Source Characterization

As previously indicated, the USTs were removed in 1993. Soil samples were collected from below the former UST locations (9.5 to 11 ft. bgs) and during installation of monitoring wells MW1 through MW6 (between 5 ft. bgs and 25 ft. bgs). Based on the analytical soil data (Table 2) collected during the aforementioned activities and the site lithology (sandy and silty clays), the former release/source area appears to be limited to the area between MW2 and MW3. The lateral distance between these two locations is approximately 10 feet. TPH concentrations in the vadose zone soils were highest in MW2, but remained at residual levels in MW3. Moreover, the highest detected TPH concentrations were reported for saturated soils beneath the water table in MW2 and MW3, suggesting that the primary hydrocarbon source capable of contributing mass to the dissolved plume is the LPHs (and not hydrocarbons in soils above the water table) encountered in the localized area between MW2 and MW3.

To this end, the proposed soil boring locations are selected to further define the lateral and vertical extent of soil contamination and LPHs beneath the former release/source area. The following is a description of the proposed soil borings and sampling:

- Two soil borings (Figure 2) will be advanced near MW2/MW3 to approximate depths of 35 feet bgs using a limited-access direct push rig. Each boring will be continuously logged for soil lithology and depth-discrete soil samples will be collected in the vadose and saturated zones at depths of 10, 15, 25, and 35 ft. bgs. Protocols and procedures for sampling of the soil borings are provided as Appendix B.
- Soil samples will be analyzed for TPH-g, TPH-d, and TPH-mo by Cal EPA-modified EPA Method 8015; BTEX, MTBE, TBA, DIPE, ETBE, TAME, EDB and 1,2-DCA by EPA Method 8260B.

3.2 GROUNDWATER MONITORING FREQUENCY

Groundwater monitoring frequency will be increased to quarterly and remain as such for four consecutive quarters. At the end of that time the groundwater monitoring frequency will be re-evaluated.

3.3 REPORTING

The investigation results will be presented in a technical report. The report will include a summary of investigation results, updated cross-sections, detailed boring logs, analytical results, rose diagrams, and site maps presenting the analytical data. Based on the results, the need for additional monitoring wells and a recommended remedial strategy will be presented in the report.

4.0 PREFERENTIAL PATHWAY SURVEY

In response to ACHCSA's request for an evaluation of potential horizontal and vertical conduits, ETIC has conducted a preferential pathway survey to identify potential migration pathways and conduits for petroleum hydrocarbons and fuel oxygenates. Petroleum hydrocarbons and fuel oxygenates may migrate through natural or artificial preferential pathways or conduits in the subsurface. Natural conduits are present where relatively permeable subsurface lithologic zones (sands and gravels) exist between less permeable layers. Artificial conduits can be generally divided into two types: 1) horizontal, which may include underground utilities and associated backfill; and 2) vertical, which may include active, inactive, or improperly destroyed wells.

The following activities were conducted to evaluate the potential for preferential movement of hydrocarbons and MTBE through horizontal and vertical conduits:

- Local agencies were contacted to obtain information on utilities in the vicinity of the site. Available construction details of the identified utilities and associated backfill material were mapped and evaluated to determine if they are potential migration pathways (Appendix C).
- An ACHCSA well database search was requested to locate all wells within a ¼-mile radius of the site. Figure 6 shows the location of wells at the site and the surrounding area as provided by the ACHCSA. A map showing the current land use in the vicinity of the site is provided as Figure 1.

The following discusses the results of efforts to identify horizontal and vertical conduits:

4.1 EVALUATION OF UNDERGROUND UTILITIES

The City of Oakland and the East Bay Municipal Utilities District (EBMUD) were contacted to determine if underground utilities were located in the area of the site. Maps illustrating information from each entity are included in Appendix C. The primary utilities passing near the site are described below.

A sanitary sewer line leaves the site and connects to a line running beneath 34th Street, approximately 40 feet north of the site. That sanitary sewer line connects to a main line which runs along Broadway. A storm drain flows to the east along the northern border of 34th Street, approximately 40 feet north of the site. The storm drain is diverted into the culvert that drains to Lake Merritt.

4.2 WELL SEARCH

The well search was performed to identify wells within a 1-mile radius of the site. This well search included: (1) use of a commercially available database (Environmental Data Resources, Inc. [EDR])

as presented in Appendix D, and (2) a review of available Alameda County Water District (ACWD) records as presented in Appendix E.

The results of these well searches are summarized below, as well as in Table 4 and on Figure 6.

4.2.1 Environmental Data Resources, Inc. Records

An electronic search of environmental records for wells within a 1-mile radius of the site was performed by EDR. The records, as presented in Appendix D, indicate that there are no federal US Geological Survey (USGS) wells and no public water supply wells located within a 1-mile radius of the site.

4.2.2 ACWD Well Survey

Mr. James Yoo, a representative of the ACWD, was contacted concerning potential public water supply wells, monitoring wells, and irrigation wells located in the vicinity of the site. Table 4 contains all sites within the area that have monitoring wells or irrigation wells. Figure 6 graphically depicts the findings from ACWD. There are 8 monitoring well sites located within a ¼-mile radius, 13 monitoring well sites located between ¼-and ½-mile radius, and 9 monitoring wells and 1 irrigation well located greater than ½-mile radius of the Val Strough site. No water supply wells were identified by the ACWD in a ½-mile radius of the site.

Eighteen of the monitoring well sites are located in the downgradient direction of the site. The irrigation well is located upgradient from the site. Shell Oil Company has two sites (with monitoring wells) within approximately a ½-mile radius of the site. They are located at 230 MacArthur Boulevard and 2800 Telegraph Avenue, downgradient and upgradient, respectively. Chevron Oil Company has three locations within a ½-mile radius of the site. They are located at 2630 Broadway (downgradient of the site), 3701 Broadway (upgradient of the site), and 3900 Piedmont Avenue (upgradient of the site). Unocal Corporation has two locations upgradient of the site located at 411 W. MacArthur Boulevard and 3943 Broadway.

5.0 SOURCE CLEANUP

As previously indicated, hydrocarbon concentrations in the immediate vicinity of the former release/source area (near former UST locations) have remained at elevated levels over time. This location corresponds closely to locations where LPHs and elevated saturated soil concentrations have been observed. Hence, hydrocarbons trapped (primarily in saturated soils and secondarily in unsaturated soils) represent the most likely source of hydrocarbons to groundwater in the future.

Based on the results of the proposed source/downgradient investigation, remedial options focusing on hydrocarbon mass reduction in soils within the former release/source area will be evaluated in detail. More specifically, remedial alternatives including high vacuum dual phase extraction, soil vapor extraction, soil excavation, and/or air/bio sparging will be evaluated for possible applicability in support of source removal/reduction at the site. The goal of such remediation will be to reduce the hydrocarbon mass in soils and limit the potential for future contribution of hydrocarbons to groundwater, thereby resulting in a reduced dissolved-phase concentrations and plume stability.

The recommended remedial alternative will likely be further evaluated via pilot testing prior to final recommendation for application under full-scale remediation. The previously referenced site investigation report will include an evaluation of remedial options and include a recommended remedial alternative for pilot testing.

TABLE 2 SOIL QUALITY DATA, STROUGH FAMILY TRUST 327-34TH STREET OAKLAND, CALIFORNIA

Well Number	Date	Depth (feet)	Concentration ($\mu\text{g/L}$)						
			Benzene	Toluene	Ethyl- benzene	Total Xylenes	TPH-g	TPH-d	MTBE

TPH-g Total Petroleum Hydrocarbons as gasoline.
 TPH-d Total Petroleum Hydrocarbons as diesel.
 TPH-mo Total Petroleum Hydrocarbons as motor oil.
 MTBE Methyl tertiary butyl ether.
 -- Not analyzed.

JUL 18 2003

ENCLOSURE

Dear Mr. Strough:

Subject: Fuel Leak Case No. RO0000134, Val Strough Chevrolet, 327-34th St., Oakland, CA

Alameda County Environmental Health staff has reviewed "Site Investigation and Groundwater Monitoring...November 2001 to November 2002", dated January 8, 2003, by Subsurface Consultants, Inc. We request that you address the following technical comments and send us the technical reports requested below.

TECHNICAL COMMENTS

1. Site Characterization - Up to 330,000 micrograms/liter (ug/l) Total Volatile Petroleum Hydrocarbons-Gasoline (TVPH-G), 31,000 ug/l TEH-Diesel (TEH-D), 2,500 ug/l TEH-Oil (TPH-O), 10,000 ug/l benzene, and 5,800 ug/l methyl tertiary-butyl ether (MTBE) have been detected in onsite monitoring wells. The lateral and vertical extent of your dissolved contaminant plume is undefined. Please propose additional sampling locations to define the plumes associated with your site in the Work Plan requested below. Include geologic cross-sections and show soil and groundwater analytical results, utility conduits, well screens, etc., and explain your rationale for the additional sampling locations. You may want to consider performing an investigation to quickly define the location of the contaminant plume downgradient from the release site prior to installing the permanent monitoring network. That will allow you to optimize the location and depth of the permanent wells, thereby reducing the cost of the monitoring work. Collection of groundwater samples using a one-time direct push water sampling tool would be appropriate for this investigation.
2. Source Characterization - Up to 10,000 mg/kg Total Petroleum Hydrocarbons-Gasoline (TPH-G) and 1,400 mg/kg TPH-G were detected in contaminated soil collected from downgradient borings MW-2 and MW-3. Thus, the source area has not been delineated. We request that you propose additional borings to delineate the lateral and vertical extent of soil contamination in the source area. Please propose boring locations in the Work Plan requested below.

3. **Preferential Pathway Survey** – We request that you perform a preferential pathway study that details the potential migration pathways and potential conduits (wells, utilities, pipelines, etc.) for horizontal and vertical migration that may be present in the vicinity of the site.
 - a) **Utility Survey** - Please submit map(s) and cross-sections showing the location and depth of all utility lines and trenches (including sewers, storm drains, pipelines, trench backfill, etc.) within and near the site and plume area(s). Evaluate the probability of the contaminant plumes encountering preferential pathways and conduits that could spread the contamination, particularly in the vertical direction to deeper water aquifers. Please submit with the Work Plan requested below.
 - b) **Well Survey** – Locate wells within a quarter mile radius of the site. Show the location of the wells and the site on a map and tabulate well construction details for each well. Please submit with the Work Plan requested below.
4. **Historical Hydraulic Gradients** – Please show using a rose diagram with magnitude and direction; include cumulative groundwater gradients in all future reports submitted for this site.
5. **“Underground Storage Tank Unauthorized Release (Leak) / Contamination Site Report”** - Please complete (enclosed).
6. **Groundwater Monitoring Frequency** – Currently all the wells are sampled semiannually. Due to the high contaminant concentrations found and to better determine the effect of the residual soil contamination on the groundwater plume, please increase the monitoring frequency to quarterly.
7. **Groundwater Analyses** – We request that you include the other fuel oxygenates Tertiary Amyl Methyl Ether (TAME), Ethyl Tertiary Butyl Ether (ETBE), Di-Isopropyl Ether (DIPE), and Tertiary Butyl Alcohol (TBA), Ethanol by EPA Method 8260 and the lead scavengers, Ethylene Dibromide (EDB), Ethylene Dichloride (EDC) for analyses of grab and monitoring well groundwater samples, and for the lead scavengers, EDB and EDC, also perform analyses on soil samples. If any of the latter compounds are detected, and are determined to be of concern (poses a risk to human health, the environment, or water resources) it is to be incorporated into your regular monitoring plan.
8. **Source Cleanup Required** - The soil contamination in the source area appears to be contributing to the high contaminant concentrations in groundwater. Please submit a proposal to reduce residual soil contamination in the Work Plan requested below.

TECHNICAL REPORT REQUEST

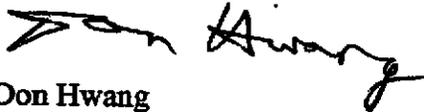

Please submit the following technical reports to Alameda County Environmental Health (Attention: Don Hwang), according to the following schedule:

Mr. Strough
July 15, 2003
Page 3 of 3

- September 15, 2003 - Work Plan
- October 31, 2003 - 3rd Quarter 2003 Groundwater Monitoring Report
- 60 days after Work Plan approval - Soil and Water Investigation Report
- January 31, 2004 - 4th Quarter 2003 Groundwater Monitoring Report

If you have any questions, I may be reached at (510) 567-6746.

Sincerely,

Don Hwang
Hazardous Materials Specialist
Local Oversight Program

Appendix B

Protocols for Soil Boring and Grab Groundwater Sampling

PROTOCOLS FOR INSTALLATION, SAMPLING, AND ABANDONMENT OF SINGLE TUBE DIRECT PUSH BORINGS

SUBSURFACE CLEARANCE SURVEY PROCEDURES

Prior to drilling, the proposed locations of borings will be marked with white paint. Underground Service Alert (USA) will be contacted one week prior to subsurface activities and a "ticket" will be issued for this investigation. USA members will mark underground utilities in the delineated areas using standard color code identifiers.

Once USA has marked the site, all proposed borehole locations will be investigated by subsurface clearance surveys to ensure clearance of any possible buried hazards (pipelines, drums, tanks). Subsurface clearance surveys use several geophysical methods to locate shallow buried man-made objects. The geophysical methods include electromagnetic induction (EMI) profiling, ground penetrating radar (GPR), and/or magnetic surveying. The choice of methods depends on targets of interest, site hydrology, and potential interference from surrounding cultural features.

SOIL CORING PROCEDURES

Prior to drilling, all boreholes will be cleared by hand auger to 4 feet below ground surface. Soil and groundwater samples will be collected for lithologic and chemical analysis using a direct driven single tube soil coring system. A hydraulic hammer will drive sampling rods into the ground to collect continuous or discrete soil cores. As the rods are advanced, soil is driven into an approximately 1.5-inch-diameter sample barrel that is attached to the end of the rods. Soil samples are collected in sleeves inside the sample barrel as the rods are advanced. After being driven 2 to 4 feet (depending on the sample interval and the length of the sample barrel), the rods are removed from the borehole. The sleeves containing the soil samples are removed from the sample barrel, and can then be preserved for chemical analyses or used for lithologic identification. Samples to be preserved for chemical analyses are sealed with Teflon tape and caps and placed in a cooler with ice. After adding new sleeves, the drive sampler and rods are then lowered back into the borehole to the previous depth and the process is repeated until the desired depth is reached.

All drive casing, sample barrels, rods, and tools will be cleaned with Alconox or equivalent detergent and deionized water. All soil will be contained in 55-gallon drums or stockpiles at the project site for later disposal.

HYDROPUNCH GROUNDWATER SAMPLING PROCEDURES

The HydroPunch sampler will be assembled with the expendable drive point, the drive head, the protective sheath, the inner stainless steel screen (or PVC) and the O-ring seal. A drive rod will be added to the top of the sampler and the entire assembly will be driven into the subsurface using the percussion of the hydraulic hammer. By adding a series of hardened steel, hollow drive rods, the sampler will be advanced to the desired depth. Once the desired depth is achieved, the rods will be retracted to expose the stainless steel screen to groundwater. Extraction of groundwater will be performed using tubing, which will be inserted down the center of the rods into the stainless screen sampler. The most common methods of extracting the groundwater are a bailer, a check valve, or a peristaltic pump, depending upon the volume desired, and the local protocols. Groundwater samples will be collected in 40mL HCl preserved VOA's, labeled and placed in a cooler with ice. If groundwater does not enter the borehole after a given period of time, the HydroPunch may be pulled up a greater distance to expose more of the formation, the boring may be advanced until a zone of

higher permeability is encountered, or the boring may be terminated without collecting a water sample at that given depth.

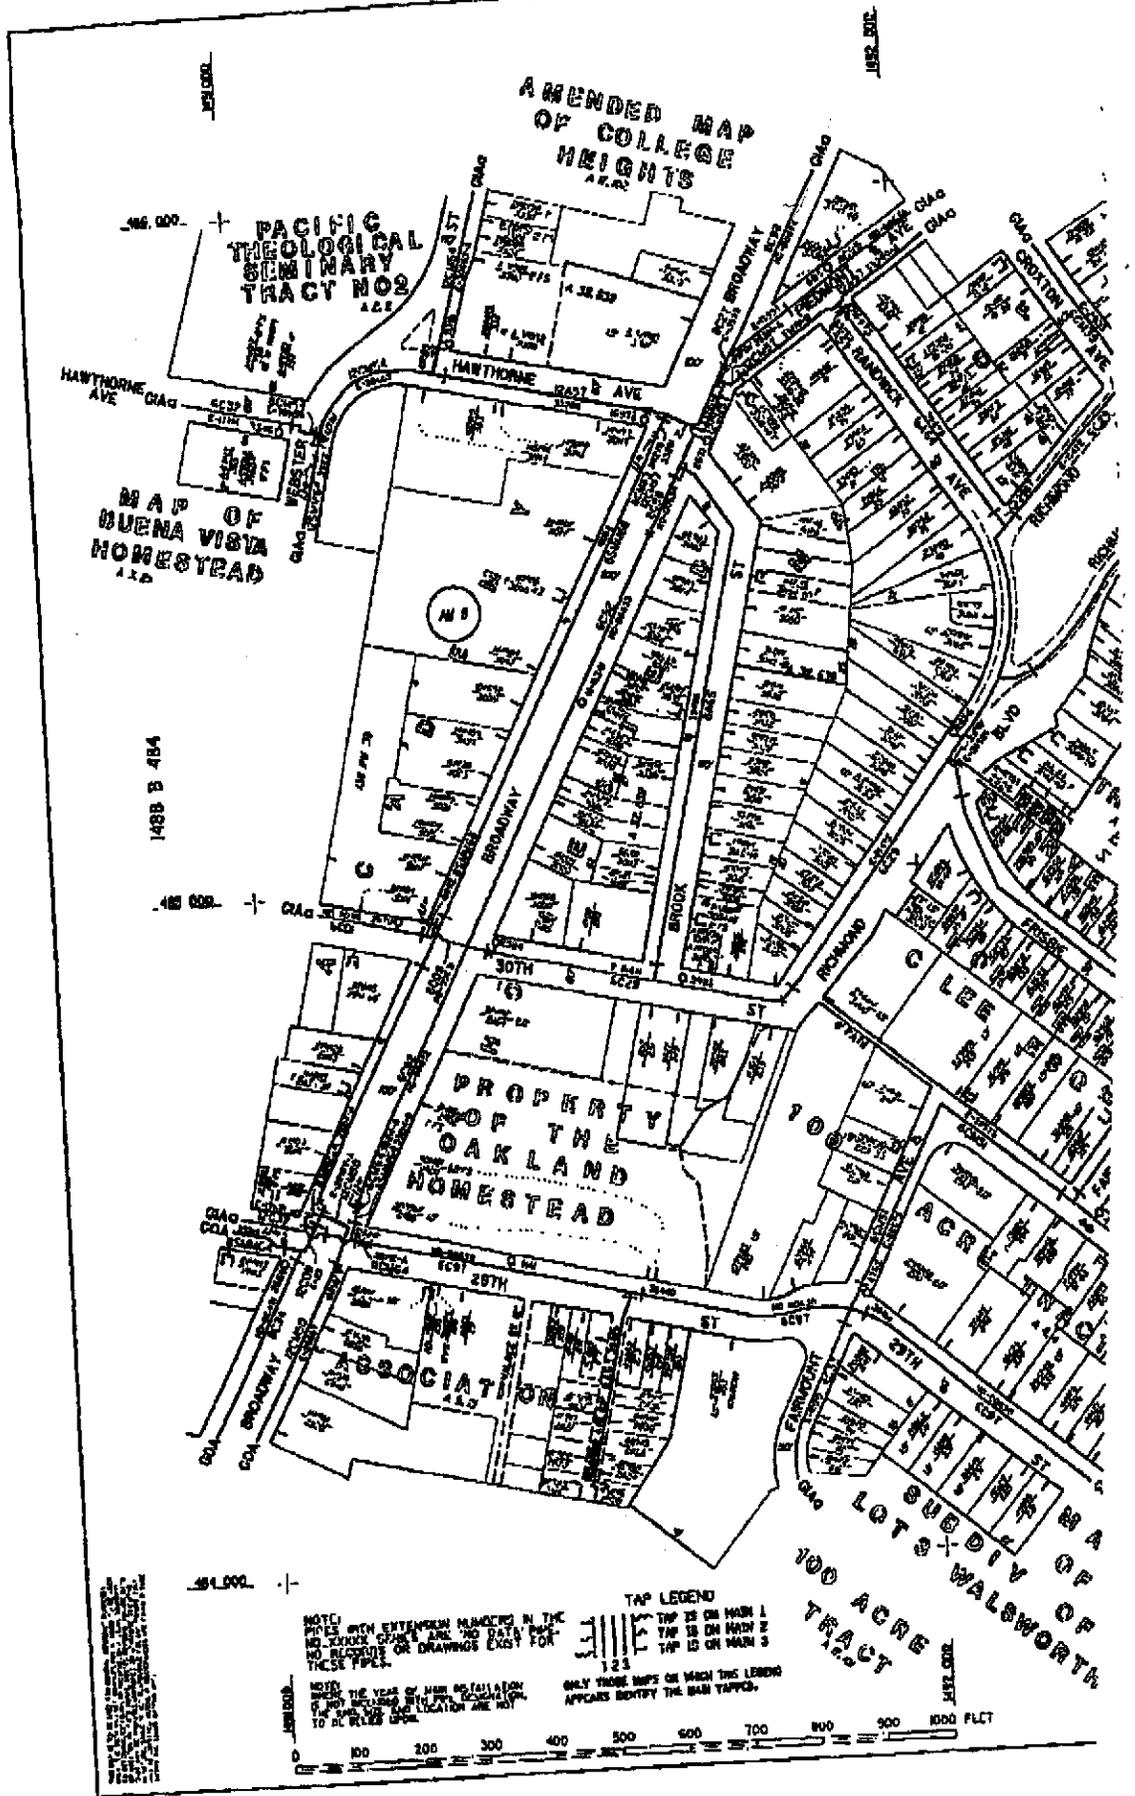

BOREHOLE GROUTING

On completion of sampling, boreholes will be abandoned with a cement grout containing less than 5 percent pure sodium bentonite. The grout will be allowed to free-fall in the boring or pumped through a grouting tube positioned at the bottom of the borehole depending on the subsurface conditions and/or the requirements of the local oversight agency. Boreholes will be resurfaced to match the surrounding conditions.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-LQG list, as provided by EDR, and dated 07/11/2003 has revealed that there is 1 RCRIS-LQG site within approximately 0.25 miles of the target property.

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there are 105 Cortese sites within approximately 1 mile of the target property.

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 04/02/2003 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>

STATE OR LOCAL ASTM SUPPLEMENTAL

CA SLIC: SLIC Region comes from the California Regional Water Quality Control Board.

A review of the CA SLIC list, as provided by EDR, has revealed that there are 2 CA SLIC sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
KAISER FOUNDATION HOSPITAL	280 W MACARTHUR BLVD	1/8 - 1/4NE	O55	63
KAISER HOSPITAL	38TH / BROADWAY	1/4 - 1/2NNE	U85	100

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there are 45 HAZNET sites within approximately 0.25 miles of the target property.

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D006	CADMIUM
D008	LEAD
D011	SILVER
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/22/03

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/16/03

Date Made Active at EDR: 08/01/03

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/23/03

Date of Last EDR Contact: 06/23/03

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System

Source: EPA

Telephone: 800-424-9346

Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/11/03
Date Made Active at EDR: 08/18/03

RAATS: RCRA Administrative Action Tracking System

Source: EPA
Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/09/03
Date of Next Scheduled EDR Contact: 09/08/03

TRIS: Toxic Chemical Release Inventory System

Source: EPA
Telephone: 202-260-1531

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/01
Database Release Frequency: Annually

Date of Last EDR Contact: 06/27/03
Date of Next Scheduled EDR Contact: 09/22/03

TSCA: Toxic Substances Control Act

Source: EPA
Telephone: 202-260-5521

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98

Date of Next Scheduled EDR Contact: 09/01/03

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

STROUGH FAMILY TRUST
327 34TH ST
OAKLAND, CA 94611

TARGET PROPERTY COORDINATES

Latitude (North):	37.821701 - 37° 49' 18.1"
Longitude (West):	122.260399 - 122° 15' 37.4"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	565093.9
UTM Y (Meters):	4186085.0
Elevation:	61 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

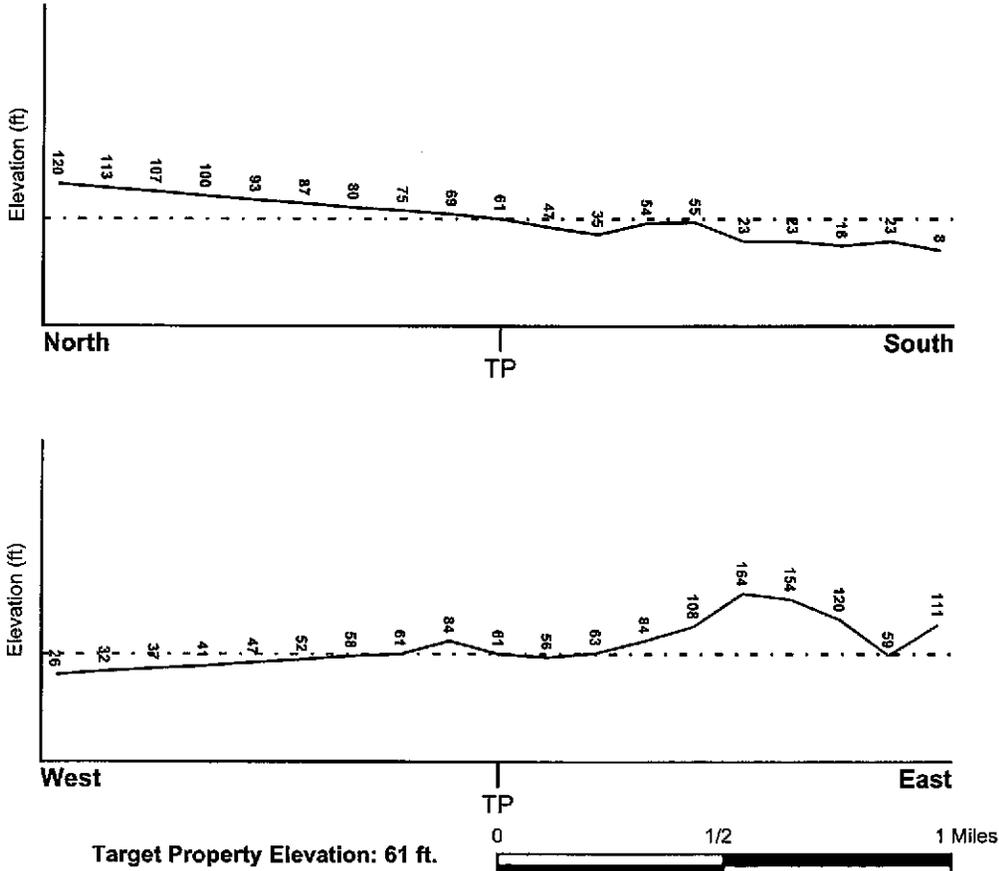

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 2437122-G3 OAKLAND WEST, CA
General Topographic Gradient: General SSW
Source: USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 61 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
ALAMEDA, CA

FEMA Flood Electronic Data
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0650480015B

0600110000A

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
OAKLAND WEST

NWI Electronic Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

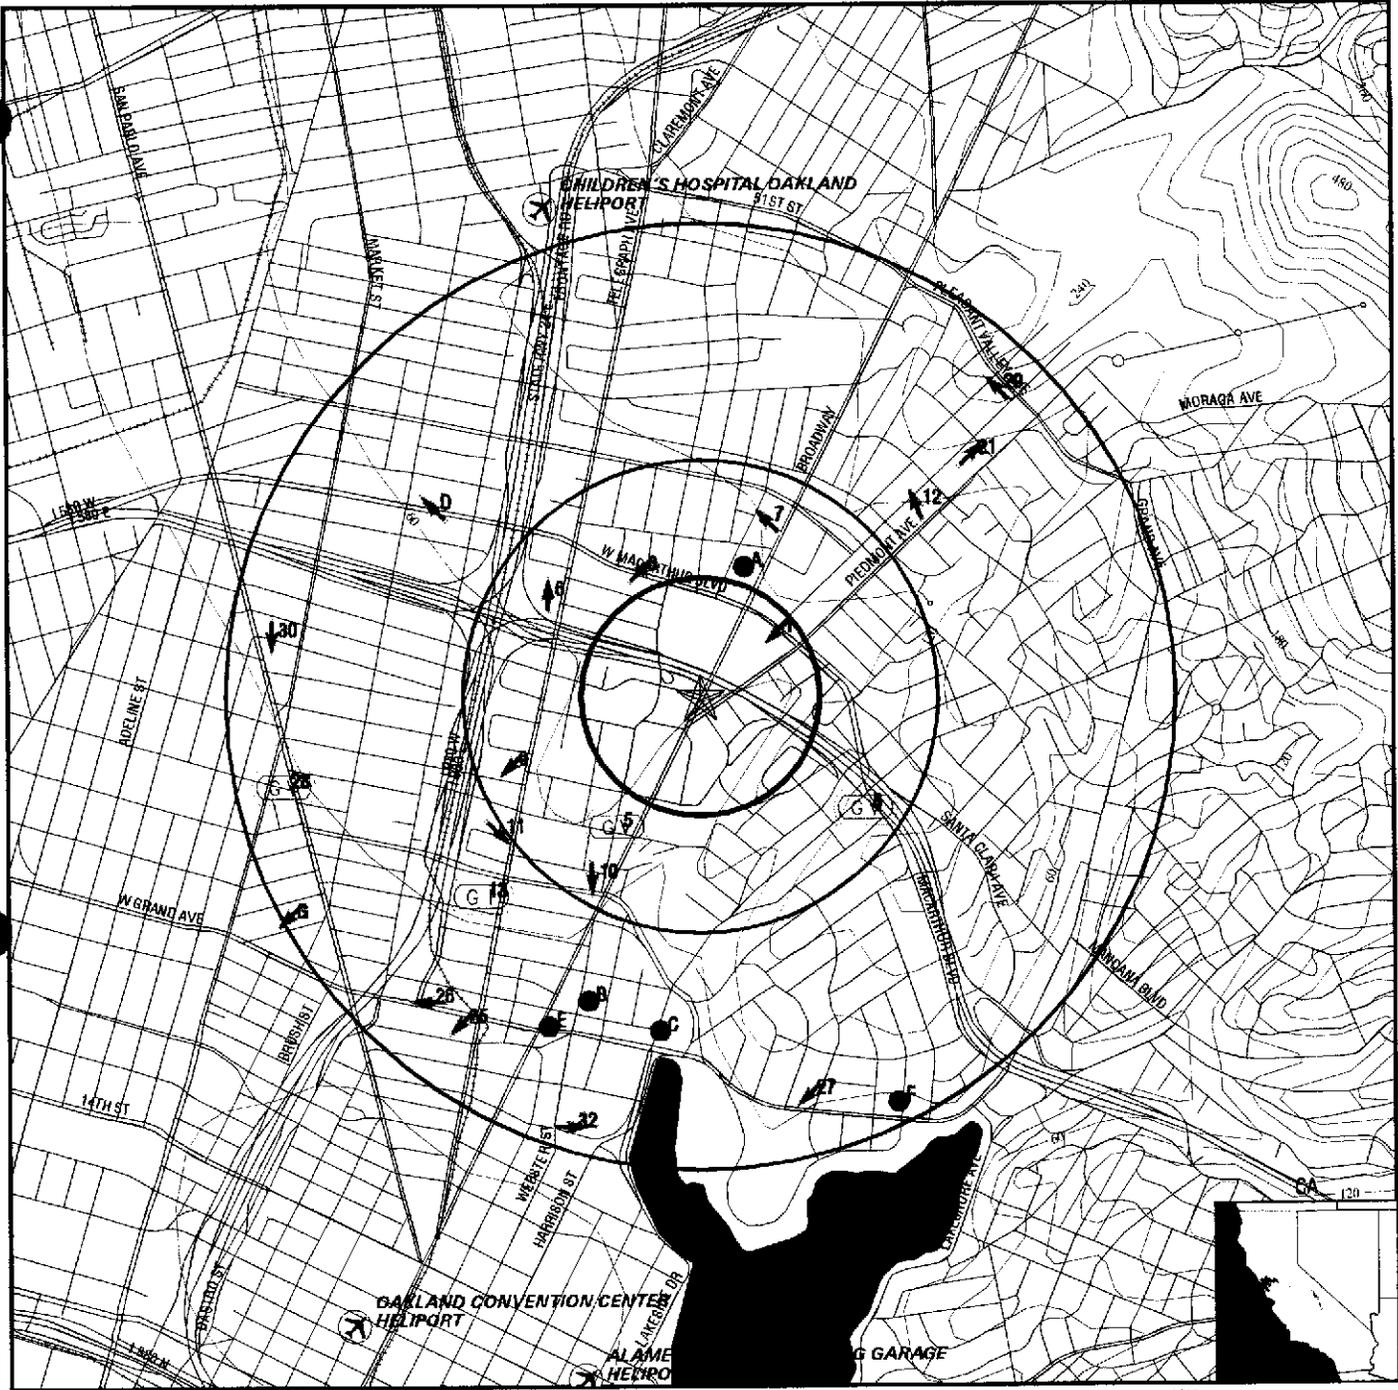

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: TIERRA
Soil Surface Texture: loam
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	12 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.50 Min: 5.10
2	12 inches	25 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.06 Min: 0.00	Max: 7.30 Min: 5.60
3	25 inches	43 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.20 Min: 0.06	Max: 8.40 Min: 5.60
4	43 inches	62 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 0.60 Min: 0.20	Max: 8.40 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay
gravelly - loam
silt loam
clay loam
silty clay loam

Surficial Soil Types: clay
gravelly - loam
silt loam
clay loam
silty clay loam

Shallow Soil Types: gravelly - loam
gravelly - clay loam
gravelly - sandy clay loam

Deeper Soil Types: clay
sandy clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

stratified
unweathered bedrock
silt loam
clay loam
weathered bedrock

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2, 3, 5 and 6

Source: Department of Conservation

Telephone: 916-323-1779

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Notes

- DOM=Domestic well
- IRR=Irrigation well
- MUN= Municipal well
- IND=Industrial well
- CAT=Cathodic well
- DES=well destroyed (through permit)
- ABN=Abandoned and not being used (but has not been destroyed through permit process)
- TES=Test well
- BOR= Geotechnical investigation
- MON= Monitoring well
- EXT=Extraction/ Vapor wells
- PIE=Piezometers
- REC=Recovery well (extraction/ vapor)
- ? = Unknown or no information found or given
