**Re: Chevron Service Station #9-0290
1802 Webster Street, Alameda, CA**

Dear Ms. Shin:

Enclosed is the quarterly Groundwater Monitoring and Sampling Activities report dated November 22, 1993, prepared by our consultant Groundwater Technology, Inc. for the above referenced site. As indicated in the report, ground water samples collected were analyzed for total petroleum hydrocarbons as gasoline (TPH-G), total petroleum hydrocarbons as diesel (TPH-D), and BTEX. Benzene was detected in monitor wells B-1, B-3, B-4, B-5, and B-7 at concentrations of 730, 520, 1200, 2, and 3.1 ppb, respectively. Depth to ground water was measured at approximately 5.1 to 7.1 feet below grade and the direction of flow is to the north - northeast.

Separate phase hydrocarbons (SPH) are being removed on a weekly basis from monitor wells A-1 and A-2. Absorbent pads are currently employed to remove the SPH due to its viscous nature. A summary of the baling program is presented in Tables 1 and 2 of the enclosed report.

We are currently evaluating an appropriate course of action in response to your letter of October 14, 1993, requesting confirmation whether the 8" sewer main located in Webster Street is or is not providing a conduit for the migration of hydrocarbons in ground water. We expect the next quarterly report to be available by April 1, 1994, and anticipate providing a response at that time.

If you have any questions or comments, please do not hesitate to contact me at (510) 842-8134.

Sincerely,

SUBJECT: *Groundwater Monitoring and Sampling Activities*
Chevron Service Station No. 9-0290
1802 Webster Street, Alameda, California

Dear Mr. Miller:

Groundwater Technology, Inc. presents the attached quarterly groundwater monitoring and sampling data collected on October 19, 1993. The ten groundwater monitoring wells at the site were gauged to measure depth to groundwater (DTW) and to check for the presence of separate-phase hydrocarbons. Separate hydrocarbons were detected in monitoring wells A-1 and A-2 at a thickness of 0.10 and 1.41, respectively. **Groundwater Technology has been removing product on a weekly basis from wells A-1 and A-2 (Tables 1 and 2).** A potentiometric surface map (Figure 1) and a summary of groundwater monitoring data (Table 3) are presented in Attachments 1 and 2, respectively. After the DTW was measured, each monitoring well was purged and sampled, except wells A-1 and A-2. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, and xylenes; total petroleum hydrocarbons-as-gasoline; and total petroleum hydrocarbons-as-diesel fuel. Results of the chemical analyses are summarized in Table 3. The laboratory report and chain-of-custody record are included in Attachment 3. Monitoring-well purge water was transported by Groundwater Technology to the Chevron Terminal in Richmond, California, for recycling.

Groundwater Technology is pleased to assist Chevron on this project. If you have any questions or comments, please contact our Concord office at (510) 671-2387.

Sincerely,
Groundwater Technology, Inc.

- TPH-G = Total petroleum hydrocarbons-as-gasoline
 TPH-D = Total petroleum hydrocarbons-as-diesel fuel
 DTW = Depth to water
 SPT = Separate-phase hydrocarbon thickness
 WTE = Water table elevation in feet above mean sea level
 TOG = Total oil and grease
 --- = Not applicable/not sampled/not measured
 * = Diesel fuel range concentration reported. The pattern of peaks observed in the chromatogram is typical of gasoline.
 ** = Does not match typical diesel patterns
 *** = Diesel fuel range concentration reported. The pattern of peaks observed in the chromatogram is a mixture of gasoline and heavy hydrocarbons.
 **** = Trip blank contaminated in lab; no back-up trip blank was carried.
- Analytical results in micrograms/liter (μ /l), parts per billion
