ENVIRONMENT

Subject:
Semi-Annual Status Report, Third Quarter 2017

Dear Mr. Nowell,

Date:
September 22, 2017

On behalf of Chevron Environmental Management Company's (CEMC's) affiliate, Union Oil Company of California (Union Oil), Arcadis has prepared the attached *Semi-Annual Status Report, Third Quarter 2017* for the following facility:

<u>76 Station No.</u>	<u>Case No.</u>	<u>Location</u>
Unocal #5781	RO0000253	3535 Pierson Street Oakland, CA

Contact:
Tamera Rogers

Phone:
408.797.2013

Email:
Tamera.Rogers@arcadis.com

If you have any questions, please do not hesitate to contact me.

Our ref:
B0035135.1640

Sincerely,

Arcadis U.S., Inc.

Tamera Rogers
Project Manager

SEMI-ANNUAL STATUS REPORT
Third Quarter 2017
September 22, 2017

Facility No: Unocal #5781

Address: 3535 Pierson Street, Oakland, CA

Arcadis Contact Person / Phone No.:

Tamera Rogers / (408) 797-2013

Arcadis Project No.:

GMR35135.1640

Primary Agency/Regulatory ID No.:

Alameda County LOP Case # RO0000253: Keith Nowell / San Francisco Bay RWQCB (Region 2) – Case # 01-1592

WORK CONDUCTED SECOND QUARTER 2017:

1. Prepared the April 10, 2017 *Quarterly Status Report, First Quarter 2017*.
2. Implemented offsite investigation (borings SB-16 through SB-19) and documented the results in the June 28, 2017 *Offsite Investigation Report*.

WORK CONDUCTED THIRD QUARTER 2017:

3. Conducted semi-annual groundwater monitoring activities on August 1, 2017.
4. Prepared the *Semi-Annual Status Report, Third Quarter 2017*.

WORK PROPOSED NEXT PERIOD [Fourth Quarter 2017 - First Quarter 2018]:

1. Conduct semi-annual groundwater monitoring activities.
2. Prepare the *Semi-Annual Status Report, First Quarter 2018*.

Current Phase of Project:	<u>Monitoring/assessment</u>	
Frequency of Monitoring / Sampling:	<u>Semi-Annual</u>	
Are Phase Separate Hydrocarbons (PSH) Present On-site:	<u>No</u>	
Cumulative PSH Recovered to Date:	<u>None</u>	(gallons)
Approximate Depth to Groundwater:	<u>11.53 to 14.38</u>	(feet below top of casing)
Approximate Groundwater Elevation:	<u>140.93 to 143.09</u>	(feet above mean sea level)

Groundwater Flow Direction	Variable
Groundwater Gradient	Variable (foot per foot)
Current Remediation Techniques:	None
Permits for Discharge:	N/A
Summary of Unusual Activity:	N/A
Agency Directive Requirements:	None

DISCUSSION

Gettler-Ryan, Inc. (G-R) conducted semi-annual groundwater monitoring activities on August 1, 2017. Field data sheets and general procedures are included as Attachment A. Seven (7) monitoring wells (MW-A and MW-4 through MW-9) were gauged, purged, and sampled by G-R representatives.

Groundwater samples were submitted to BC Laboratories, Inc. of Bakersfield, California under standard chain-of-custody protocols. Gauging and analytical data obtained by G-R for this event are summarized in Table 1. Historical gauging and analytical data for the site are summarized in Table 2 and included as Attachment B. The site location map and site plan are presented as Figures 1 and 2, respectively; the groundwater elevation contour map for the site on August 1, 2017 is presented as Figure 3. Isoconcentration contours (where applicable) for total petroleum hydrocarbons as gasoline (TPH-g), benzene, methyl tertiary butyl ether (MTBE), tertiary butyl alcohol (TBA) and total petroleum hydrocarbons as diesel (TPH-d) are presented on Figures 4 through 8, respectively. A historical groundwater flow direction rose diagram is presented on Figure 9. A copy of the laboratory analytical report and chain-of-custody documentation are included as Attachment C.

The groundwater flow direction was determined to be variable during the current event, thus a gradient could not be calculated. The groundwater analytical results in MW-5 were consistent with previous events. Analytical results indicated that TPH-d (450 micrograms per liter [$\mu\text{g}/\text{L}$]), TPH-g (1,600 $\mu\text{g}/\text{L}$), toluene (0.7 $\mu\text{g}/\text{L}$), ethylbenzene (8.6 $\mu\text{g}/\text{L}$), and total xylenes (19 $\mu\text{g}/\text{L}$) were detected in the groundwater sample collected from MW-5. TPH-g was also detected either for the first time or for the first time in several years in wells MW-A (950 $\mu\text{g}/\text{L}$), MW-4 (330 $\mu\text{g}/\text{L}$), MW-6 (200 $\mu\text{g}/\text{L}$), and MW-7 (110 $\mu\text{g}/\text{L}$); based on the historical non-detect results in these wells, the current results appear to be anomalous as similar groundwater elevations have previously occurred with no detections. Low concentrations of MTBE were detected in monitoring wells MW-4 (1.7 $\mu\text{g}/\text{L}$), MW-5 (1.9 $\mu\text{g}/\text{L}$), MW-6 (first occurrence; 1.3 $\mu\text{g}/\text{L}$),

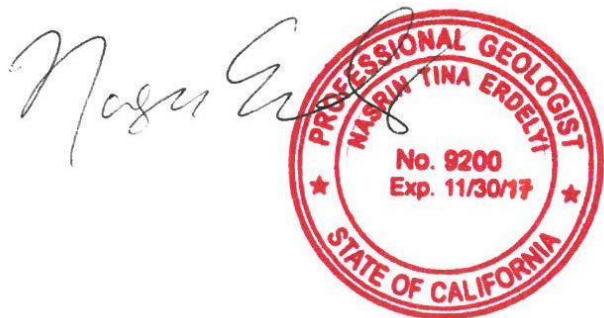

and MW-8 (0.63 µg/L). TPH-d was also detected in MW-8 (680 µg/L) for the first time since 2012. The detected concentrations were generally within the historical ranges. No other constituents of concern (COCs) were detected above laboratory reporting limits in any of the wells during this sampling event.

In December 2015, AECOM submitted the *Site Conceptual Model*, and identified potential groundwater impacts to the east of MW-5 as a data gap, which is consistent with the Low Threat Closure Policy (LTCP) checklist on the State Water Resources Control Board (SWRCB) GeoTracker website. On June 28, 2017 Arcadis submitted the *Offsite Investigation Report* (report), documenting field activities to collect offsite soil samples east of MW-5 and attempts to collect grab groundwater samples. No groundwater was encountered in the borings; however, based on the soil results, it was concluded that groundwater impacts were delineated offsite given the absence of COCs. Therefore, Arcadis considers the offsite groundwater delineation data gap closed and no further investigation is warranted.

Arcadis recommends continued groundwater monitoring to further evaluate groundwater quality and concentration trends; in particular, to evaluate if the TPH-g detections in MW-A, MW-4, MW-6, and MW-7 were indeed anomalous.

LIMITATIONS

This report was prepared in accordance with the scope of work outlined in Arcadis' contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the site. It was prepared for the exclusive use of Chevron Environmental Management Company's affiliate, Union Oil Company of California ("Union Oil"), for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Arcadis. To the extent that this report is based on information provided to Arcadis by third parties, Arcadis may have made efforts to verify this third party information, but Arcadis cannot guarantee the completeness or accuracy of this information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties, expressed or implied are made by Arcadis.

Notes:

MW = Groundwater monitoring well
 TOC = Top of casing
 ft amsl = Feet above mean sea level
 DTW = Depth to groundwater
 ft bTOC = Feet below top of casing
 -- = Not sampled/not measured
 ft = Feet
 Samples analyzed by EPA Method 8260B:
 GW Elev = Groundwater elevation
 $\mu\text{g/L}$ = Micrograms per liter
Bold = Value exceeds laboratory reporting limits
 <0.50 = Not detected at or above the laboratory detection limit

TPH-g = Total petroleum hydrocarbons, gasoline range by LUFT GC/MS according to Environmental Protection Agency (EPA) Method 8015B
 TPH-d = Total petroleum hydrocarbons, diesel range by LUFT GC/MS according to EPA Method 8015B
 TPH-d (w/SGC) = Total petroleum hydrocarbons, diesel with Silica Gel Cleanup, by LUFT method
 Benzene, toluene, ethylbenzene and total xylenes (collectively BTEX)
 MTBE = Methyl tert-butyl ether
 TBA = Tert-butanol or tertiary butyl alcohol
 EDB = 1,2-Dibromoethane
 EDC = 1,2-Dichloroethane
 DIPE = Di-isopropyl ether
 ETBE = Ethyl tert-butyl ether
 TAME = Tert-amyl methyl ether
 Ethanol
 Data QA/QC by: IC 08.29.2017

Notes:

- MW = Groundwater monitoring well
- TOC = Top of casing
- ft amsl = Feet above mean sea level
- DTW = Depth to groundwater
- ft bTOC = Feet below top of casing
- PSH = Phase separate hydrocarbons
- ft = Feet
- gal = Gallons
- GW Elev = Groundwater elevation
- µg/L = Micrograms per liter
- Bold** = Value exceeds laboratory reporting limits; PSH thickness is greater than 0.00 ft
- <50 = Not detected at or above the stated limit
- = Not sampled/Not measured

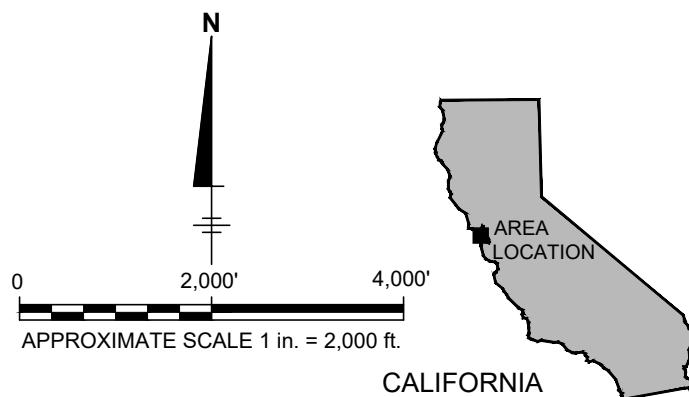

TPH-g = Total petroleum hydrocarbons, gasoline range by LUFT GC/MS according to Environmental Protection Agency (EPA) Method 8015
 TPH-d = Total petroleum hydrocarbons, diesel range by LUFT GC/MS according to EPA Method 8015B
 TPH-d (w/SGC) = Total petroleum hydrocarbons, diesel with Silica Gel Cleanup, by LUFT method
 Benzene, toluene, ethylbenzene, and total xylenes (collectively BTEX)
 MTBE = Methyl tert-butyl ether
 TBA = Tert-butanol or tertiary butyl alcohol
 EDB = 1,2-Dibromoethane
 EDC = 1,2-Dichloroethane
 DIPE = Di-isopropyl ether
 ETBE = Ethyl tert-butyl ether
 TAME = Tert-amyl methyl ether
 Ethanol

COPIES	DESCRIPTION
VIA PDF	Groundwater Monitoring and Sampling Data Package Second Semi Annual Event of August 1, 2017

COMMENTS:

Pursuant to your request, we are providing you with copies of the above referenced data for your use.

Please provide us the updated historical data prior to the next monitoring and sampling event for our field use.

Please feel free to contact me if you have any comments/questions.

STANDARD OPERATING PROCEDURE GROUNDWATER SAMPLING

Gettler-Ryan Inc. (GR) field personnel adhere to the following procedures for the collection and handling of groundwater samples prior to analysis by the analytical laboratory. All work is performed in accordance with the GR Health & Safety Plan and all client-specific programs. The scope of work and type of analysis to be performed is determined prior to commencing field work.

Prior to sampling, the presence or absence of free-phase hydrocarbons is determined using an interface probe. Product thickness, if present, is measured to the nearest 0.01 foot and is noted in the field notes. In addition, all depth to water level measurements are collected with a static water level indicator and are also recorded in the field notes, prior to purging and sampling any wells. Total well depths are measured annually.

After water levels are collected and prior to sampling, if purging is to occur, each well is purged a minimum of three well casing volumes of water using pre-cleaned pumps (stack, peristaltic or Grundfos), or disposable bailers. Temperature, pH and electrical conductivity are measured a minimum of three times during the purging (additional parameters such as dissolved oxygen, oxidation reduction potential, turbidity may also be measured, depending on specific scope of work.). Purging continues until these parameters stabilize.

Groundwater samples are collected using disposable bailers. The water samples are transferred from the bailer into appropriate containers. Pre-preserved containers, supplied by analytical laboratories, are used. When pre-preserved containers are not available, the laboratory is instructed to preserve the sample as appropriate. Duplicate samples are collected for the laboratory to use in maintaining quality assurance/quality control standards, as directed by the scope of work. The samples are labeled to include the job number, sample identification, collection date and time, analysis, preservation (if any), and the sample collector's initials. The water samples are placed in a cooler, maintained at 4°C for transport to the laboratory. Once collected in the field, all samples are maintained under chain of custody until delivered to the laboratory.

The chain of custody document includes the job number, type of preservation, if any, analysis requested, sample identification, date and time collected, and the sample collector's name. The chain of custody is signed and dated (including time of transfer) by each person who receives or surrenders the samples, beginning with the field personnel and ending with the laboratory personnel.

A laboratory supplied trip blank accompanies each sampling set. The trip blank is analyzed for some or all of the same compounds as the groundwater samples.

As requested by Chevron Environmental Management Company, the purge water and decontamination water generated during sampling activities is transported by Clean Harbors Environmental Services to Seaport Environmental located in Redwood City, California.

Notes And Definitions

MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A52	Chromatogram not typical of diesel.
Q02	Matrix spike precision is not within the control limits.
S09	The surrogate recovery on the sample for this compound was not within the control limits.
