### DISCUSSION:

Fourth Quarter 2007 ground-water monitoring and sampling was conducted at Station #601 on 1 October 2007 by Stratus personnel. Water levels were gauged in the 15 wells at the Site. Stratus reported that wells MW-6 and MW-7 were dry and sheen was observed in wells MW-1 and MW-3. Well MW-12 was also recorded on Stratus' field sheet as dry. However, Stratus confirmed that the dry notation for well MW-12 was incorrectly recorded. No other irregularities were encountered during water-level gauging. Depth-to-water measurements ranged from 6.53 ft at MW-15 to 9.95 ft at MW-14. Resulting ground-water surface elevations ranged from 16.32 ft above mean sea level (msl) in well MW-11 to 14.68 ft above msl at well MW-10. Water level elevations were between historic minimum and maximum ranges for each well, as summarized in Table 1. Water level elevations yielded a potentiometric ground-water flow direction and gradient to the southwest at approximately 0.005 ft/ft,

consistent with historical data (see Table 3). Ground-water monitoring field data sheets are provided within Appendix A. Measured depths to ground water and respective ground-water elevations are summarized in Table 1. Current and historic ground-water flow directions and gradients are provided in Table 3. Potentiometric ground-water elevation contours are presented in Drawing 1.

Ground-water samples were collected from wells MW-1 and MW-3 through MW-5. Well MW-3 purged dry before three casing volumes were removed, and well MW-6 was dry. No other irregularities were encountered during sampling. Samples were submitted under chain-of-custody protocol to Test America Analytical Testing Corporation (Morgan Hill, California), for analysis of Gasoline Range Organics (GRO, C4-12) by the LUFT GCMS Method; for Benzene, Toluene, Ethylbenzene, and Total Xylenes (BTEX) by EPA Method 8260B; and tert-Amyl methyl ether (TAME), tert-Butyl alcohol (TBA), Di-isopropyl ether(DIPE), 1,2-Dibromomethane (EDB), 1,2-Dichloroethane (1,2-DCA), Ethanol, Ethyl tert-butyl ether (ETBE), and Methyl tert-butyl ether (MTBE) by EPA Method 8260B. The sample collected from well MW-1 was also analyzed for Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270C. The laboratory noted that the reporting limits for SVOCs in the sample collected from well MW-1 were elevated due to matrix interference and the sample collected from well MW-3 was preserved improperly. No other significant irregularities were encountered during laboratory analysis of the samples. Ground-water sampling field data sheets and the laboratory analytical report, including chain-of-custody documentation, are provided in Appendix A.

Gasoline range organics (GRO) were detected above the laboratory reporting limits in each of the four wells sampled at concentrations up to 48,000 micrograms per liter ( $\mu\text{g/L}$ ) in well MW-3. Benzene was detected above the laboratory reporting limit in each of the four wells sampled at concentrations up to 260  $\mu\text{g/L}$  in wells MW-1. Toluene was detected above the laboratory reporting limit in three of the four wells sampled at concentrations up to 100  $\mu\text{g/L}$  in well MW-3. Ethylbenzene was detected above the laboratory reporting limit in each of the four wells sampled at concentrations up to 1,700  $\mu\text{g/L}$  in well MW-3. Total Xylenes were detected above the laboratory reporting limit in each of the four wells sampled at concentrations up to 7,700  $\mu\text{g/L}$  in well MW-3. TAME was detected above the laboratory reporting limit in one of the four wells sampled at a concentration of 1.6  $\mu\text{g/L}$  in well MW-4. MTBE was detected above the laboratory reporting limit in three of the four wells sampled at concentrations up to 11  $\mu\text{g/L}$  in well MW-4. The SVOCs 2-Methylnaphthalene and Naphthalene were detected above laboratory reporting limits in well MW-1 at concentrations of 390  $\mu\text{g/L}$  and 950  $\mu\text{g/L}$ , respectively. The remaining analytes were not detected above their laboratory reporting limits in the four wells sampled this quarter.

Detected analyte concentrations were within the historic minimum and maximum ranges recorded for each well. Historic laboratory analytical results are summarized in Table 1, Table 2, and Table 4. Drawing 1 provides Fourth Quarter 2007 laboratory analytical results for GRO, Benzene, and MTBE constituents. Drawing 2 provides GRO iso-concentration contours. Drawing 3 provides Benzene iso-concentration contours. Drawing 4 provides MTBE iso-concentration contours. A copy of the Laboratory Analytical Report, including chain-of-custody documentation is provided in Appendix A. Ground-water monitoring data (GEO\_WELL) and laboratory analytical results (EDF) were uploaded to the GeoTracker AB2886 database. Upload confirmation pages are provided in Appendix B.

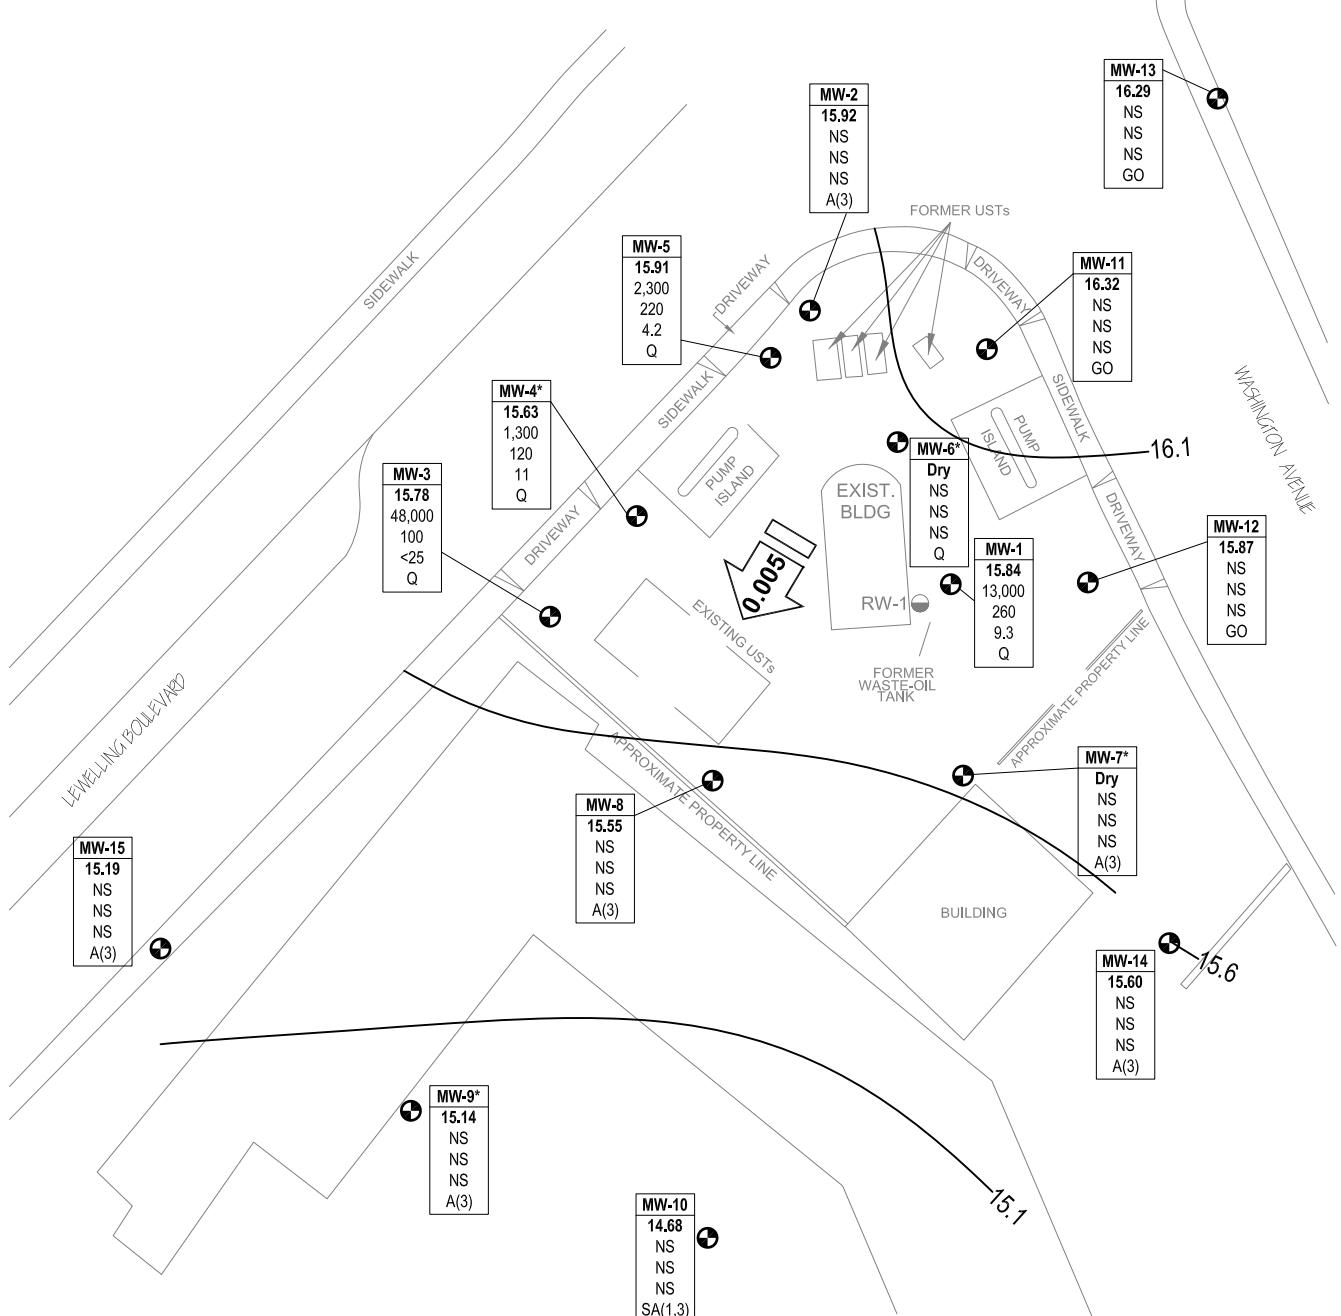

## CLOSURE:

The findings presented in this report are based upon: observations of Stratus field personnel (see Appendix A), the points investigated, and results of laboratory tests performed by Test America (Morgan Hill, California). Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of Atlantic Richfield Company. It is possible that

variations in soil or ground-water conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

**SYMBOLS & ABBREVIATIONS:**

-- = Not analyzed/applicable/measured/available

< = Not detected at or above specified laboratory reporting limit

DO = Dissolved oxygen

DTW = Depth to water in ft bgs

ft bgs = Feet below ground surface

ft MSL = Feet above mean sea level

GRO = Gasoline range organics, range C4-C12

GWE = Groundwater elevation measured in ft MSL

mg/L = Milligrams per liter

MTBE = Methyl tert-butyl ether

NP = Well not purged before sampling

P = Well purged before sampling

Semi-VOCs = Semivolatile organic compounds

TOC = Top of casing in ft MSL

TPH-g = Total petroleum hydrocarbons as gasoline

g/L = Micrograms per liter

ND = Not detected above the various semi-VOCs laboratory reporting limits

**FOOTNOTES:**

a = Sheen in well.

b = Well is dry.

c = Insufficient water to sample.

d = Chromatogram Pattern: Gasoline C6-C10.

e = Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.

g = TPH, benzene, toluene, ethylbenzene, and total xylenes (BTEX), and MTBE analyzed by EPA Method 8260B beginning on the 1st quarter 2003 sampling event (1/23/03).

h = This sample was re-extracted beyond the EPA recommended holding time. The results may still be useful for their intended purpose.

i = GWE adjusted using the formula GWE = (TOC-DTW) + (free product (FP) thickness x 0.8).

j = Sample contains a higher boiling point hydrocarbon mixture quantitated as gasoline. The chromatogram did not match the typical gasoline fingerprint.

k = DO reading not taken due to the presence of sheen.

l = FP in well.

m = Gauged with ORC sock in well.

n = Method reporting limit for benzene, toluene, ethylbenzene, and/or total xylenes was raised due to high analyte concentration requiring sample dilution or matrix interference.

o = Well dewatered.

p = Well inaccessible.

q = Insufficient sample available to follow standard QC procedures.

r = Wells resurveyed February 27, 2004.

s = Reporting limits elevated due to matrix interferences (SVOCs).

t = Sample preserved improperly.

**NOTES:**

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported.

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12.

Values for DO and pH were obtained through field measurements.

Top and bottom of screen measurements for wells MW-1 to MW-3, and MW-7 were taken from Delta Environmental Consulting Inc. sampling sheets because the well construction logs were not available.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

The carbon range for the TPH-GRO has been changed from C6-C10 to C4-C12. The carbon range for TPH-DRO has been changed from C10-C28 to C10-C36. EPA 8015B has been modified to better meet the requirements of California regulatory agencies.

These samples were received with no custody seals.

The volatile organic analyses for MW-3 were performed on an insufficiently acidified sample. Unless there is biological activity in the sample there would be no impact on the sample data if it is analyzed within 7 days. Per EPA Methods Information Communication Exchange (MICE), in the case of where there is biological activity in the sample, the aromatic compounds (BTEX) may exhibit a low bias regardless of how quickly it is analyzed. Since the laboratory does not have knowledge of biological activity in submitted samples, the samples are qualified merely to indicate the lack of proper acid preservation.
