DISCUSSION:

First Quarter 2008 ground-water monitoring and sampling was conducted at Station #601 on 7 January 2008 by Stratus personnel. Water levels were gauged in 14 of the 15 wells at the Site. MW-3 was covered by a large puddle due to heavy rain and could not be accessed. No other irregularities were encountered during water-level gauging. Depth-to-water measurements ranged from 5.79 ft at MW-8 to 8.99 ft at MW-7. Resulting ground-water surface elevations ranged from 17.76 ft above mean sea level (msl) in well MW-8 to 15.26 ft above msl at well MW-9. Water level elevations were between historic minimum and maximum ranges for each well, as summarized in Table 1. Water level elevations yielded a potentiometric ground-water flow direction and gradient to the southwest at approximately 0.006 ft/ft, consistent with historical data (see Table 3). Ground-water monitoring field data sheets are provided within Appendix A. Measured depths to ground water and respective ground-water elevations are

summarized in Table 1. Current and historic ground-water flow directions and gradients are provided in Table 3. Potentiometric ground-water elevation contours are presented in Drawing 1.

Ground-water samples were collected from wells MW-1, MW-4 through MW-6, and MW-10. Well MW-3 was covered by a large puddle due to heavy rain and could not be accessed. No other irregularities were encountered during sampling. Samples were submitted under chain-of-custody protocol to Test America Analytical Testing Corporation (Morgan Hill, California), for analysis of Gasoline Range Organics (GRO, C4-12) by the LUFT GCMS Method; for Benzene, Toluene, Ethylbenzene, and Total Xylenes (BTEX) by EPA Method 8260B; and tert-Amyl methyl ether (TAME), tert-Butyl alcohol (TBA), Di-isopropyl ether (DIPE), 1,2-Dibromomethane (EDB), 1,2-Dichloroethane (1,2-DCA), Ethanol, Ethyl tert-butyl ether (ETBE), and Methyl tert-butyl ether (MTBE) by EPA Method 8260B. The sample collected from well MW-1 was also analyzed for Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270C. The laboratory noted that the reporting limits for SVOCs in the sample collected from well MW-1 were increased due to high levels of non-target analytes. No other significant irregularities were encountered during laboratory analysis of the samples. Ground-water sampling field data sheets and the laboratory analytical report, including chain-of-custody documentation, are provided in Appendix A.

Gasoline range organics (GRO) were detected above the laboratory reporting limits in three of the five wells sampled at concentrations up to 2,100 micrograms per liter ($\mu\text{g/L}$) in well MW-5. Benzene was detected above the laboratory reporting limit in three of the five wells sampled at concentrations up to 190 $\mu\text{g/L}$ in wells MW-5. Toluene was detected above the laboratory reporting limit in one of the five wells sampled at a concentration of 88 $\mu\text{g/L}$ in well MW-5. Ethylbenzene was detected above the laboratory reporting limit in three of the five wells sampled at concentrations up to 190 $\mu\text{g/L}$ in well MW-1. Total Xylenes were detected above the laboratory reporting limit in three of the five wells sampled at concentrations up to 46 $\mu\text{g/L}$ in well MW-5. TAME was detected above the laboratory reporting limit in one of the five wells sampled at a concentration of 17 $\mu\text{g/L}$ in well MW-6. MTBE was detected above the laboratory reporting limit in three of the five wells sampled at concentrations up to 37 $\mu\text{g/L}$ in well MW-6. The SVOCs 2-Methylnaphthalene and Naphthalene were detected above laboratory reporting limits in well MW-1 at concentrations of 260 $\mu\text{g/L}$ and 740 $\mu\text{g/L}$, respectively. The remaining analytes were not detected above their laboratory reporting limits in the four wells sampled this quarter.

Detected analyte concentrations were within the historic minimum and maximum ranges recorded for each well, with the exception of historic minimums for Benzene in well MW-1 and for total xylenes in well MW-4. Historic laboratory analytical results are summarized in Table 1, Table 2, and Table 4. Drawing 1 illustrates First Quarter 2008 laboratory analytical results for GRO, Benzene, and MTBE constituents. Drawing 2 illustrates GRO iso-concentration contours. Drawing 3 illustrates Benzene iso-concentration contours. Drawing 4 illustrates MTBE iso-concentration contours. A copy of the laboratory analytical report, including chain-of-custody documentation is provided in Appendix A. Ground-water monitoring data (GEO_WELL) and laboratory analytical results (EDF) were uploaded to the GeoTracker AB2886 database. Upload confirmation pages are provided in Appendix B.

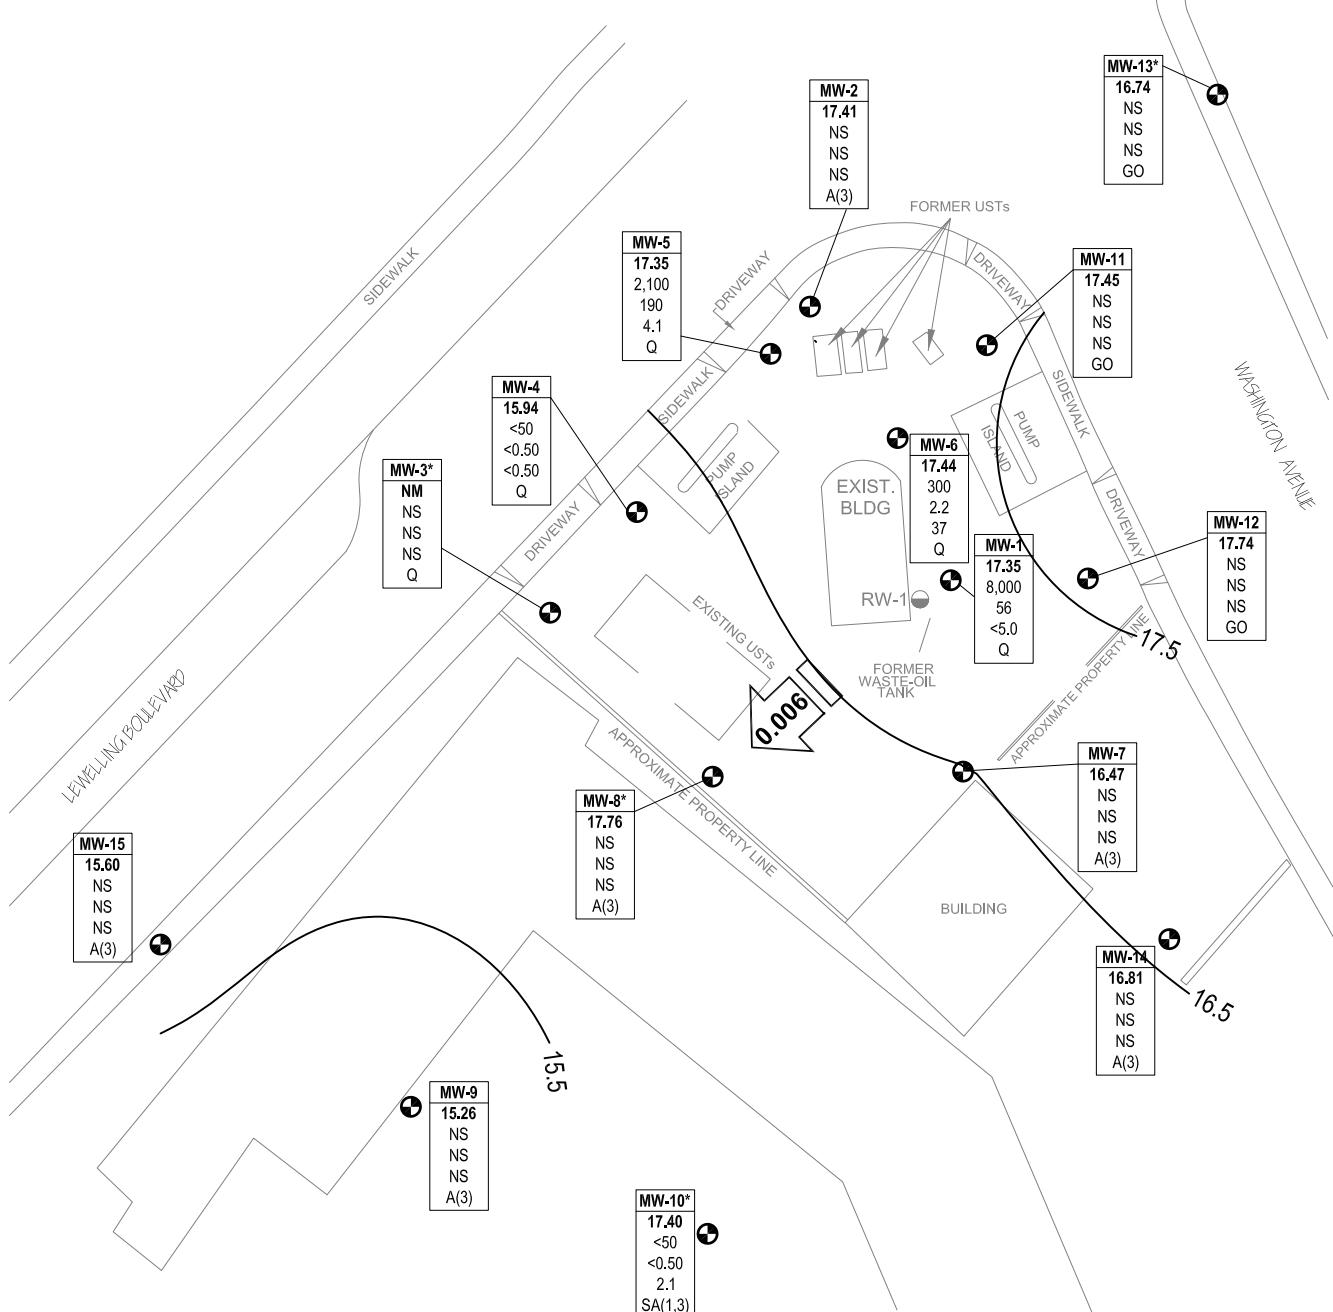

CLOSURE:

The findings presented in this report are based upon: observations of Stratus field personnel (see Appendix A), the points investigated, and results of laboratory tests performed by Test America (Morgan Hill, California). Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of Atlantic Richfield Company. It is possible that variations in soil or ground-water conditions could exist beyond points explored in this investigation.

Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

SYMBOLS & ABBREVIATIONS:

-- = Not analyzed/applicable/measured/available

< = Not detected at or above specified laboratory reporting limit

DO = Dissolved oxygen

DTW = Depth to water in ft bgs

ft bgs = Feet below ground surface

ft MSL = Feet above mean sea level

GRO = Gasoline range organics, range C4-C12

GWE = Groundwater elevation measured in ft MSL

mg/L = Milligrams per liter

MTBE = Methyl tert-butyl ether

NP = Well not purged before sampling

P = Well purged before sampling

Semi-VOCs = Semivolatile organic compounds

TOC = Top of casing in ft MSL

TPH-g = Total petroleum hydrocarbons as gasoline

g/L = Micrograms per liter

ND = Not detected above the various semi-VOCs laboratory reporting limits

FOOTNOTES:

a = Sheen in well.

b = Well is dry.

c = Insufficient water to sample.

d = Chromatogram Pattern: Gasoline C6-C10.

e = Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.

g = TPH, benzene, toluene, ethylbenzene, and total xylenes (BTEX), and MTBE analyzed by EPA Method 8260B beginning on the 1st quarter 2003 sampling event (1/23/03).

h = This sample was re-extracted beyond the EPA recommended holding time. The results may still be useful for their intended purpose.

i = GWE adjusted using the formula GWE = (TOC-DTW) + (free product (FP) thickness x 0.8).

j = Sample contains a higher boiling point hydrocarbon mixture quantitated as gasoline. The chromatogram did not match the typical gasoline fingerprint.

k = DO reading not taken due to the presence of sheen.

l = FP in well.

m = Gauged with ORC sock in well.

n = Method reporting limit for benzene, toluene, ethylbenzene, and/or total xylenes was raised due to high analyte concentration requiring sample dilution or matrix interference.

o = Well dewatered.

p = Well inaccessible.

q = Insufficient sample available to follow standard QC procedures.

r = Wells resurveyed February 27, 2004.

s = Reporting limits elevated due to matrix interferences (SVOCs).

t = Sample preserved improperly.

u = Reporting limits raised due to high level of non-target analytes (SVOCs).

NOTES:

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported.

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12.

Values for DO and pH were obtained through field measurements.

Top and bottom of screen measurements for wells MW-1 to MW-3, and MW-7 were taken from Delta Environmental Consulting Inc. sampling sheets because the well construction logs were not available.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.
