DISCUSSION:

Second Quarter 2010 groundwater monitoring and sampling was conducted at Station #601 on June 3, 2010 by BAI personnel. Water levels were gauged in each of the 19 wells associated with the Site. No irregularities were encountered during water-level gauging. Depth-to-water measurements in wells associated with Station #601 ranged from 5.79 ft at MW-15 to 8.71 ft at MW-14. Resulting groundwater surface elevations in wells associated with Station #601 ranged from 17.50 ft above mean sea level (msl) in well MW-13 to 15.89 ft at well MW-10. Water level elevations in wells associated with Station #601 were between historic minimum and maximum ranges for each well, as summarized in Table 1. Water level elevations in wells associated with Station #601 were used to create groundwater elevation contours, resulting in a potentiometric groundwater flow direction and gradient to the southwest at approximately 0.004 ft/ft, consistent with historical data (see Table 3). Groundwater monitoring field data sheets are provided within Appendix A. Measured depths to groundwater and respective

groundwater elevations are summarized in Table 1. Current and historic groundwater flow directions and gradients are provided in Table 3. A Site Location Map is provided as Drawing 1. Potentiometric groundwater elevation contours are presented in Drawing 2.

Consistent with the new sampling schedule, groundwater samples were collected from wells MW-2 through MW-5, MW-16, and MW-17 MW-10. No significant irregularities were encountered during sampling from these six wells. Samples were submitted under chain-of-custody protocol to Calscience Environmental Laboratories, Inc. (Garden Grove, California), for analysis of Gasoline Range Organics (GRO, C6-12) by EPA Method 8015B; for Benzene, Toluene, Ethylbenzene, and Total Xylenes (BTEX) by EPA Method 8260B; and Methyl Tert-Butyl Ether (MTBE), Ethyl Tert-Butyl Ether (ETBE), Tert-Amyl Methyl Ether (TAME), Di-Isopropyl Ether (DIPE), 1,2-Dibromomethane (EDB), 1,2-Dichloroethane (1,2-DCA), Tert-Butyl Alcohol (TBA) and Ethanol by EPA Method 8260B. Samples were also analyzed for the following bio-degradation parameters: Nitrate, Sulfate, Dissolved Sulfide, and Ferrous Iron. Groundwater sampling field data sheets and the laboratory analytical report, including chain-of-custody documentation, are provided in Appendix A.

Gasoline range organics (GRO) were detected above the laboratory reporting limits in five of the six wells sampled at concentrations up to 26,000 micrograms per liter ($\mu\text{g}/\text{L}$) in well MW-3. Benzene was detected above the laboratory reporting limit in four wells at concentrations up to 140 $\mu\text{g}/\text{L}$ in wells MW-5 and MW-17. Toluene was detected above the laboratory reporting limit in three wells at concentrations up to 45 $\mu\text{g}/\text{L}$ in well MW-17. Ethylbenzene was detected above the laboratory reporting limit in five wells at concentrations up to 1,200 $\mu\text{g}/\text{L}$ in well MW-17. Total Xylenes were detected above the laboratory reporting limit in four wells at concentrations up to 2,900 $\mu\text{g}/\text{L}$ in well MW-3. MTBE was detected above the laboratory reporting limit in two wells at concentrations of 2.3 $\mu\text{g}/\text{L}$ in well MW-10 and 5.8 $\mu\text{g}/\text{L}$ in well MW-18. TAME was detected above the laboratory reporting limit in MW-18 at a concentration of 7.6 $\mu\text{g}/\text{L}$. The remaining analytes were not detected above their laboratory reporting limits in the six wells sampled this quarter.

Detected analyte concentrations were within the historic minimum and maximum ranges recorded for each well sampled, with the exceptions a historic minimum recorded for Benzene in new wells MW 16 through MW-18 since this was only their second round of sampling. Historic laboratory analytical results are summarized in Table 1, Table 2, and Table 4. Drawing 2 illustrates the Second Quarter 2010 laboratory analytical results for GRO, Benzene, and MTBE constituents. Drawing 3 illustrates GRO iso-concentration contours. Drawing 4 illustrates Benzene iso-concentration contours. Drawing 5 illustrates MTBE iso-concentration contours. Co-monitored elevation and analytical data for the adjacent Former Shell Station #129460 at 15275 Washington Avenue are provided in Appendix B. Groundwater monitoring data (GEO_WELL) and laboratory analytical results (EDF) from Station #601 were uploaded to the GeoTracker AB2886 database. Upload confirmation pages are provided in Appendix C.

CONCLUSIONS AND RECOMMENDATIONS:

The average groundwater elevations for Station #601 during the Second Quarter 2010 monitoring event generally increased in comparison to groundwater elevations from the First Quarter 2010. The groundwater gradient and flow direction for Station #601 during the Second Quarter 2010 monitoring event is not appreciably different from historical data.

New monitoring wells MW-16 and MW-17 reported somewhat elevated concentrations when compared to the most recent analytical data collected from the wells they replaced (MW-4 and MW-5, respectively). New monitoring well MW-18 reported approximately unchanged concentrations when

compared to the most recent analytical data collected from the wells they replaced (MW-6, respectively). Former Shell Station #129460 was not monitored or sampled during the Second Quarter 2010.

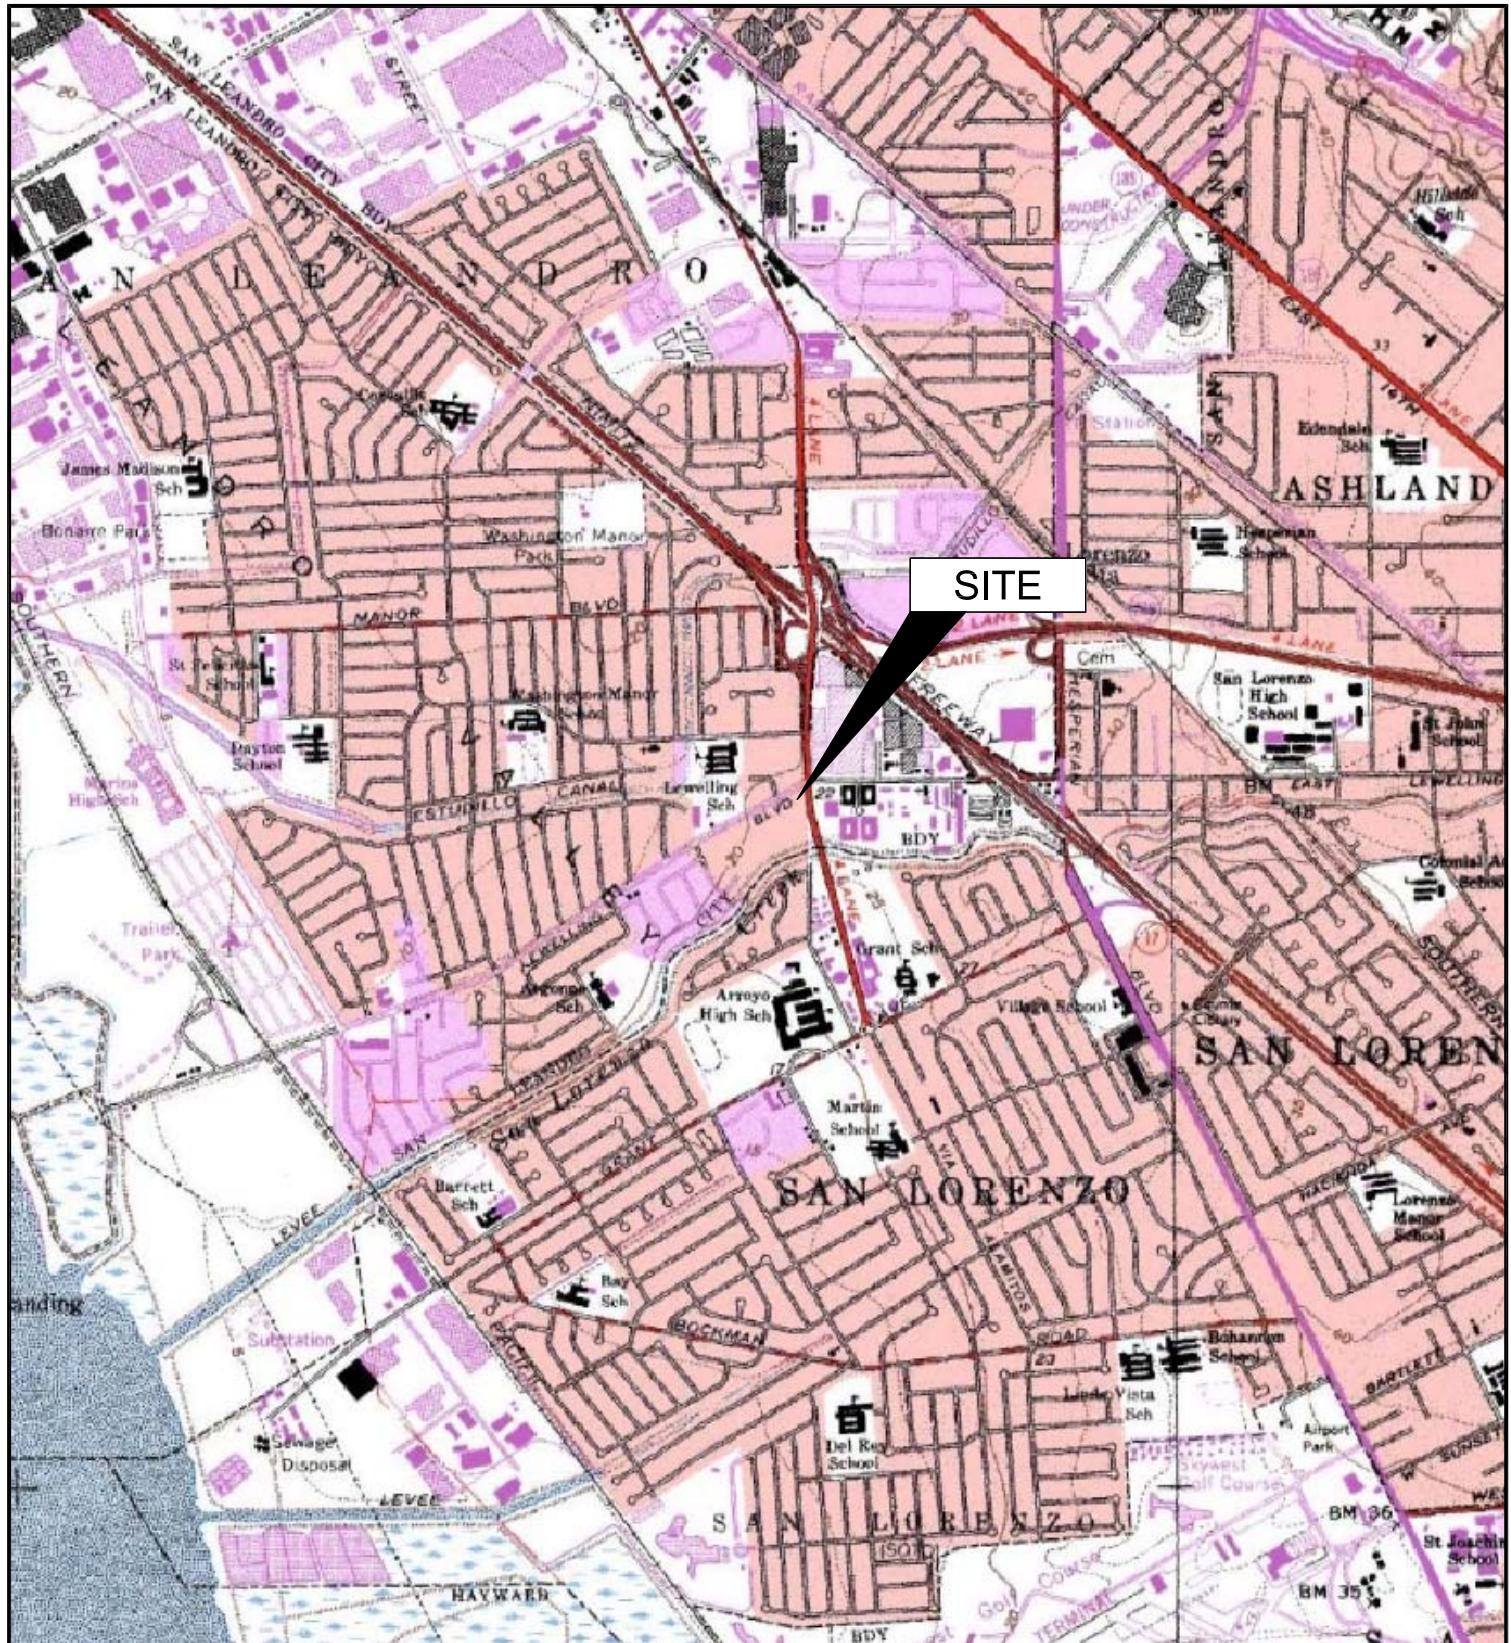

CLOSURE:

The findings presented in this report are based upon: observations of BAI field personnel (see Appendix A), the points investigated, and results of laboratory tests performed by Calscience Environmental Laboratories, Inc. (Garden Grove, California). Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of Atlantic Richfield Company. It is possible that variations in soil or ground-water conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

SYMBOLS & ABBREVIATIONS:

-- = Not analyzed/applicable/measured/available

< = Not detected at or above specified laboratory reporting limit

DO = Dissolved oxygen

DTW = Depth to water in ft bgs

ft bgs = Feet below ground surface

GRO = Gasoline range organics, range C4-C12

GWE = Groundwater elevation measured in ft

mg/L = Milligrams per liter

MTBE = Methyl tert-butyl ether

NP = Well not purged before sampling

P = Well purged before sampling

Semi-VOCs = Semivolatile organic compounds

TOC = Top of casing in ft

TPH-g = Total petroleum hydrocarbons as gasoline

g/L = Micrograms per liter

ND = Not detected above the various semi-VOCs laboratory reporting limits

FOOTNOTES:

a = Sheen in well.

b = Well is dry.

c = Insufficient water to sample.

d = Chromatogram Pattern: Gasoline C6-C10.

e = Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.

g = TPH, benzene, toluene, ethylbenzene, and total xylenes (BTEX), and MTBE analyzed by EPA Method 8260B beginning on the 1st quarter 2003 sampling event (1/23/03).

h = This sample was re-extracted beyond the EPA recommended holding time. The results may still be useful for their intended purpose.

i = GWE adjusted using the formula GWE = (TOC-DTW) + (free product (FP) thickness x 0.8).

j = Sample contains a higher boiling point hydrocarbon mixture quantitated as gasoline. The chromatogram did not match the typical gasoline fingerprint.

k = DO reading not taken due to the presence of sheen.

l = FP in well.

m = Gauged with ORC sock in well.

n = Method reporting limit for benzene, toluene, ethylbenzene, and/or total xylenes was raised due to high analyte concentration requiring sample dilution or matrix interference.

o = Well dewatered.

p = Well inaccessible.

q = Insufficient sample available to follow standard QC procedures.

r = Wells resurveyed February 27, 2004.

s = Reporting limits elevated due to matrix interferences (SVOCs).

t = Sample preserved improperly.

u = Reporting limits raised due to high level of non-target analytes (SVOCs) .

v = Wells surveyed June 23, 2009.

NOTES:

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported.

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12.

Values for DO and pH were obtained through field measurements.

Top and bottom of screen measurements for wells MW-1 to MW-3, and MW-7 were taken from Delta Environmental Consulting Inc. sampling sheets because the well construction logs were not available.

GRO analysis was completed by EPA method 8260B (C4-C12) for samples collected from the time period April 2006 through February 4, 2008. The analysis for GRO was changed to EPA method 8015B (C6-C12) for samples collected from the time period February 5, 2008 through the present.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.
