Re: Third Quarter 2010 Semi-Annual Groundwater Monitoring Report, Atlantic Richfield Company Station #601, 712 Lewelling Boulevard, San Leandro, Alameda County, California; ACEH Case #RO0000309

Dear Mr. Carmel:

Attached is the *Third Quarter 2010 Groundwater Monitoring Report* for Atlantic Richfield Company (a BP affiliated company) Station #601 located at 712 Lewelling Boulevard, San Leandro, California (Site). This report presents the results of groundwater monitoring conducted at the Site during the Third Quarter of 2010.

Should you have questions regarding the work performed or results obtained, please do not hesitate to contact us at (707) 455-7290.

Sincerely,

BROADBENT & ASSOCIATES, INC.

  
Thomas A. Sparrowe, P.G.  
Senior Geologist

## STATION #601 SEMI-ANNUAL GROUNDWATER MONITORING REPORT

Facility: #601	Address:	712 Lewelling Boulevard, San Leandro, California
Environmental Business Manager:	Mr. Chuck Carmel	
Consulting Co./Contact Persons:	Broadbent & Associates, Inc.(BAI)/Tom Sparrowe (707) 455-7290	
Consultant Project No.:	06-88-605	
Primary Agency/Regulatory ID No.:	Alameda County Environmental Health (ACEH) ACEH Case #RO0000309	

### WORK PERFORMED THIS QUARTER (Third Quarter 2010):

1. Prepared and submitted *Second Quarter 2009 Status Report* (BAI, 7/23/2010).
2. Conducted coordinated groundwater monitoring/sampling for Third Quarter 2010. Work performed on July 22, 2010 by BAI for wells associated with Station #601 and by Delta Consultants for wells associated with Former Shell Station #129460.

### WORK PROPOSED FOR NEXT QUARTER (Fourth Quarter 2010):

1. Prepare and submit *Third Quarter 2010 Semi-Annual Groundwater Monitoring Report* (contained herein).
2. Prepare and submit *Additional Soil and Groundwater Investigation Work Plan*.
3. No environmental field work is presently scheduled to be performed during the Fourth Quarter of 2010.

### RESULTS SUMMARY:

Current phase of project:	<b>Groundwater Monitoring/Sampling/Feasibility Studies</b>
Frequency of groundwater monitoring:	<b>Semi-Annually (1Q &amp; 3Q): Wells MW-1 through MW-3 and MW-8 through MW-19</b>
Frequency of groundwater sampling:	<b>Semi-Annually (1Q &amp; 3Q): MW-1, MW-3, MW-10, MW-16, MW-17 and MW-18</b>
	<b>Annually (3Q): MW-2, MW-8, MW-9, MW-14, MW-15 and MW-19</b>
Is free product (FP) present on-site:	<b>No</b>
FP recovered this quarter:	<b>0 gallons</b>
Cumulative FP recovered:	<b>3.45 gallons (Well MW-1)</b>
Current remediation techniques:	<b>NA</b>
Depth to ground water (below TOC):	<b>6.25 ft (MW-15) to 9.45 ft (MW-14)</b>
General groundwater flow direction:	<b>Southwest</b>
Approximate hydraulic gradient:	<b>0.003 ft/ft</b>

### DISCUSSION:

Third Quarter 2010 groundwater monitoring and sampling was conducted at Station #601 on July 22, 2010 by BAI personnel. Water levels were gauged in 18 of the 19 wells associated with the Site. A vehicle was parked over MW-19 rendering it inaccessible for monitoring and sampling this quarter. No other irregularities were encountered during water-level gauging. Concurrent monitoring and sampling was also conducted on July 22, 2010 at the nearby Former Shell Service Station #129460 by Delta Consultants. Depth-to-water measurements in wells associated with Station #601 ranged from 6.25 Feet (ft) at MW-15 to 9.45 ft at MW-14. Resulting groundwater surface elevations in wells associated with Station #601 ranged from 16.83 ft above datum in well MW-13 to 15.18 ft at well MW-10. Water level elevations in wells associated with Station #601 were between historic minimum and maximum ranges for each well, as summarized in Table 1. Water level elevations in wells associated

with Station #601 were used to create groundwater elevation contours, resulting in a potentiometric groundwater flow direction and gradient to the southwest at approximately 0.003 ft/ft, consistent with historical data (see Table 3). Water level elevations from the Former Shell Station #129460 were based on a survey referencing the older National Geodetic Vertical Datum of 1929 (NGVD29) and could not be used in conjunction with the water level elevations from Station #601 which reference the newer North American Vertical Datum of 1988 (NAVD88, the vertical datum preferred by AB2886 for use in GeoTracker). Groundwater monitoring field data sheets are provided within Appendix A. Measured depths to groundwater and respective groundwater elevations are summarized in Table 1. Current and historic groundwater flow directions and gradients are provided in Table 3. Co-monitored data from the nearby Former Shell Station #129460 at 15275 Washington Avenue are provided in Appendix B. A Site Location Map is provided as Drawing 1. Potentiometric groundwater elevation contours are presented in Drawing 2.

Consistent with the new sampling schedule, groundwater samples were collected from wells MW-1 through MW-3, MW-8 through MW-10, and MW-15 through MW-18. As stated above, well MW-19 was inaccessible for sampling this quarter. No significant irregularities were encountered during sampling from these ten wells. Samples were submitted under chain-of-custody protocol to Calscience Environmental Laboratories, Inc. (Garden Grove, California), for analysis of Gasoline Range Organics (GRO, C6-12) by EPA Method 8015B; for Benzene, Toluene, Ethylbenzene, and Total Xylenes (BTEX) by EPA Method 8260B; and Methyl Tert-Butyl Ether (MTBE), Ethyl Tert-Butyl Ether (ETBE), Tert-Amyl Methyl Ether (TAME), Di-Isopropyl Ether (DIPE), 1,2-Dibromomethane (EDB), 1,2-Dichloroethane (1,2-DCA), Tert-Butyl Alcohol (TBA) and Ethanol by EPA Method 8260B. The sample collected from well MW-1 was also analyzed for Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270C. The reporting limits for constituents analyzed by 8260B in the sample collected from well MW-1 were raised due to high levels of non-target compounds. No other significant irregularities were encountered during laboratory analysis of the samples. Groundwater sampling field data sheets and the laboratory analytical report, including chain-of-custody documentation, are provided in Appendix A.

Gasoline range organics (GRO) were detected above the laboratory reporting limits in seven of the ten wells sampled at concentrations up to 42,000 micrograms per liter ( $\mu\text{g}/\text{L}$ ) in well MW-3. Benzene was detected above the laboratory reporting limit in four wells at concentrations up to 170  $\mu\text{g}/\text{L}$  in well MW-17. Toluene was detected above the laboratory reporting limit in two wells at concentrations up to 63  $\mu\text{g}/\text{L}$  in well MW-17. Ethylbenzene was detected above the laboratory reporting limit in five wells at concentrations up to 1,300  $\mu\text{g}/\text{L}$  in well MW-17. Total Xylenes were detected above the laboratory reporting limit in three wells at concentrations up to 3,500  $\mu\text{g}/\text{L}$  in well MW-3. MTBE was detected above the laboratory reporting limit in four wells at concentrations ranging from 1.6  $\mu\text{g}/\text{L}$  in well MW-10 to 5.1  $\mu\text{g}/\text{L}$  in well MW-18. TAME was only detected above the laboratory reporting limit in MW-18 at a concentration of 4.9  $\mu\text{g}/\text{L}$ . The SVOCs 1-Methylnaphthalene, 2-Methylnaphthalene, and Naphthalene were detected above laboratory reporting limits in well MW-1 at concentrations of 200  $\mu\text{g}/\text{L}$ , 350  $\mu\text{g}/\text{L}$ , and 610  $\mu\text{g}/\text{L}$ , respectively. The remaining analytes were not detected above their laboratory reporting limits in the ten wells sampled this quarter.

Detected analyte concentrations were within the historic minimum and maximum ranges recorded for each well sampled, with the exception of historic minimum recorded for MTBE in wells MW-2, MW-4 and MW-5, and historic maximum recorded for GRO wells MW-16 and MW-17 and for Benzene in wells MW-16 through MW-18. Historic laboratory analytical results are summarized in Table 1, Table 2, and Table 4. Drawing 2 illustrates the Third Quarter 2010 laboratory analytical results for GRO, Benzene, and MTBE constituents. Drawing 3 illustrates GRO iso-concentration contours. Drawing 4 illustrates Benzene iso-concentration contours. Drawing 5 illustrates MTBE iso-concentration contours. The co-monitored elevation and analytical data for the adjacent Former Shell Station #129460 at 15275

Washington Avenue are provided in Appendix B. Groundwater monitoring data (GEO\_WELL) and laboratory analytical results (EDF) from Station #601 were uploaded to the GeoTracker AB2886 database. Upload confirmation pages are provided in Appendix C.

## **CONCLUSIONS AND RECOMMENDATIONS:**

The average groundwater elevations for Station #601 during the Third Quarter 2010 monitoring event (including new wells MW-16 through MW-19) generally decreased in comparison to groundwater elevations from the Second Quarter 2010. The groundwater gradient and flow direction for Station #601 during the Third Quarter 2010 monitoring event is not appreciably different from historical data. It is unfortunate that the coordinated monitoring and sharing of data from Former Shell Station #129460 could not result in a larger mapped area of groundwater elevations between the two sites. Delta is aware that the elevation survey of Former Shell Station #129460 uses the outdated NGVD29 vertical datum. Delta has notified their client Shell Oil Products of the need to resurvey Former Shell Station #129460 to the appropriate NAVD88 vertical datum. Resurveying the Former Shell Station #129460 to the appropriate vertical datum is recommended but outside the scope or control of BAI or Atlantic Richfield Company.

Monitoring wells MW-16 and MW-17 reported somewhat elevated concentrations when compared to the most recent analytical data collected from the wells they replaced (MW-4 and MW-5, respectively). Monitoring well MW-18 generally reported unchanged concentrations when compared to the most recent analytical data collected from the well it replaced (MW-6). Former Shell Station #129460 monitoring wells S-11, S-12, and S-14 are not gauged or sampled on a periodic basis. Shell monitoring well S-13 is gauged semi-annually, but sampled annually in the First calendar quarter. Periodic gauging and sampling data from these wells would prove useful but recommending their gauging and sampling are beyond the scope or control of BAI or Atlantic Richfield Company.

## **CLOSURE:**

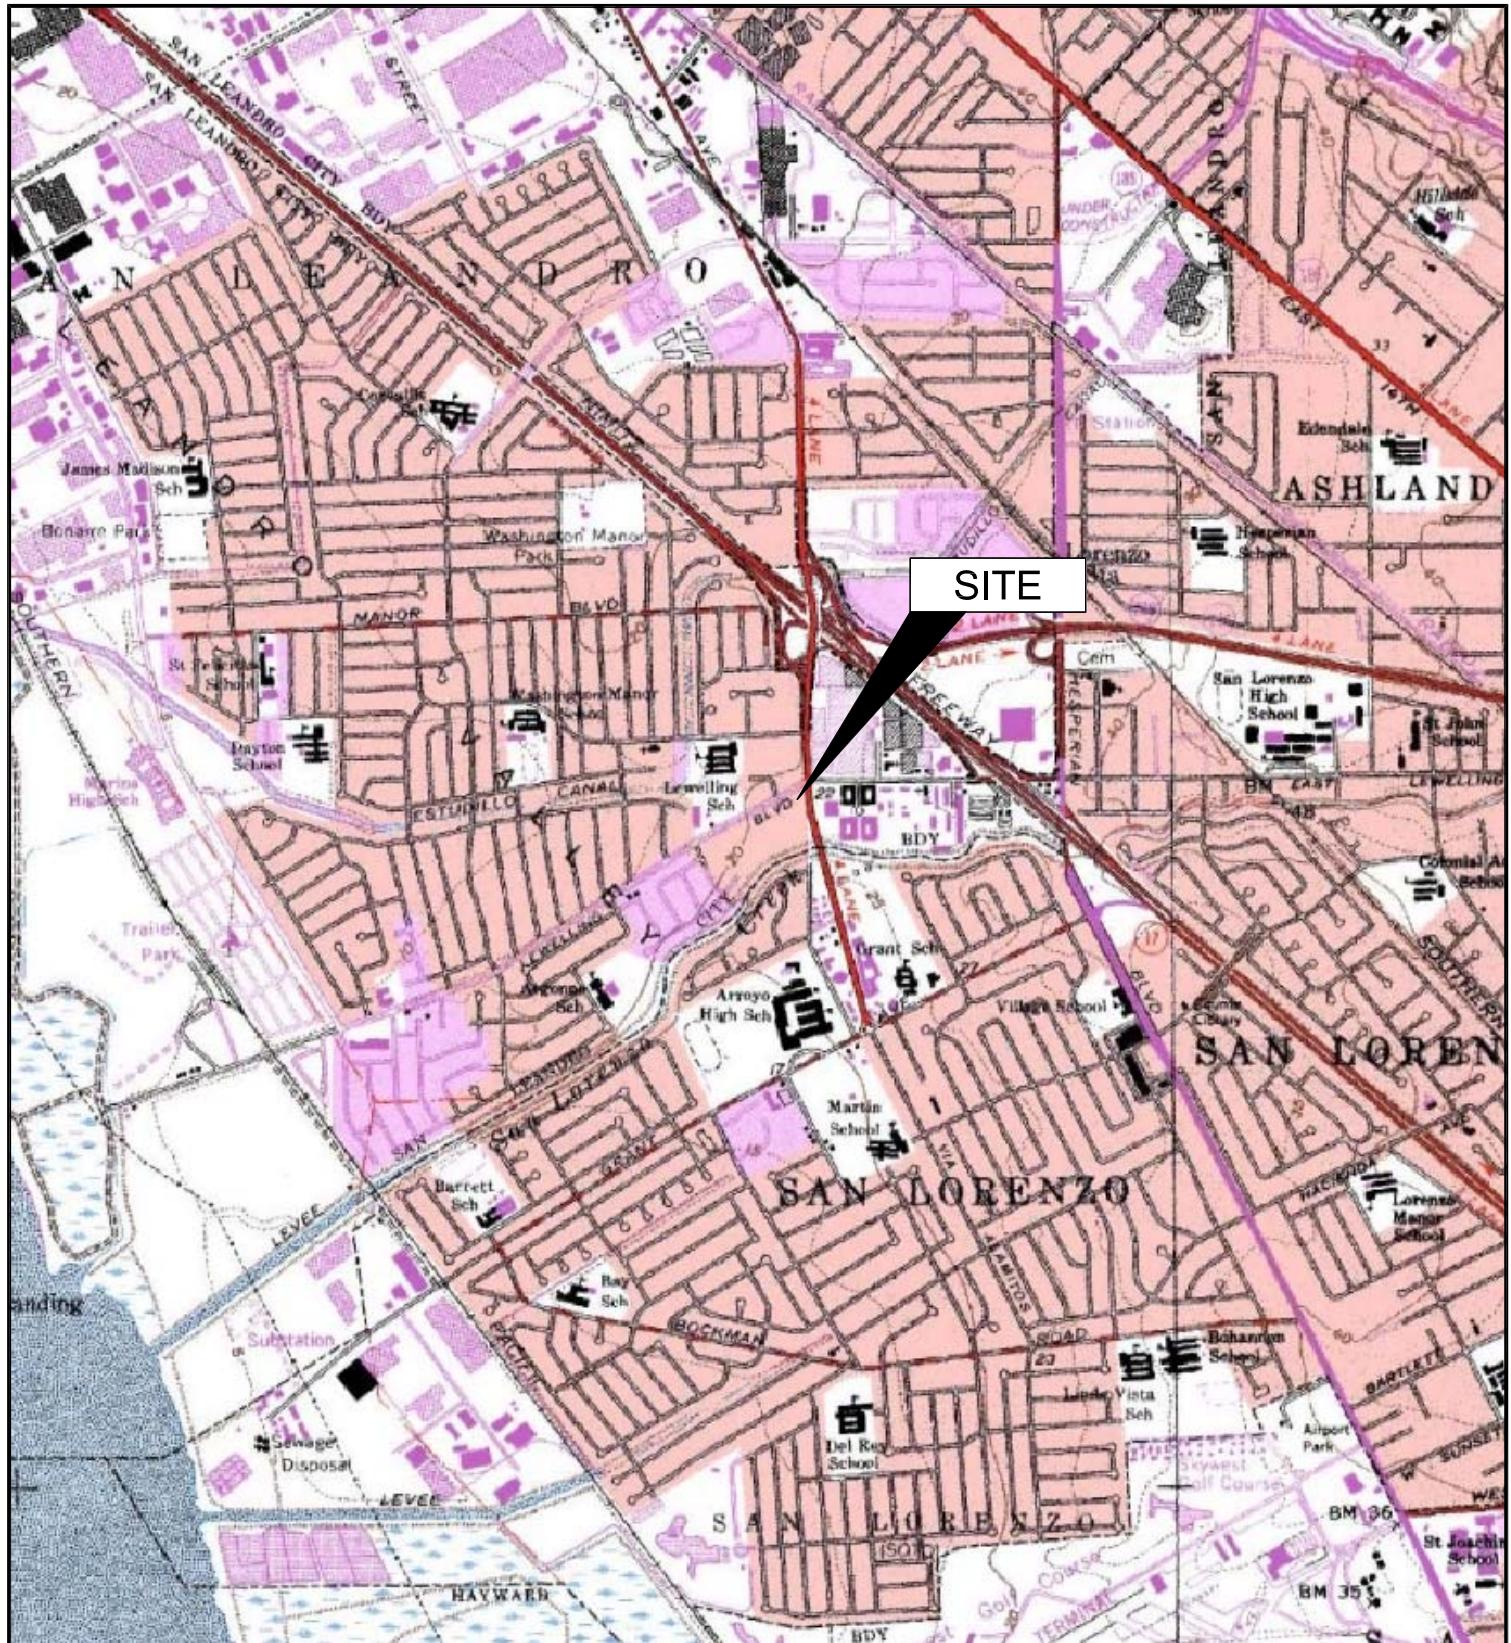

The findings presented in this report are based upon: observations of BAI field personnel (see Appendix A), the points investigated, and results of laboratory tests performed by Calscience Environmental Laboratories, Inc. (Garden Grove, California). Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of Atlantic Richfield Company. It is possible that variations in soil or groundwater conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

#### SYMBOLS & ABBREVIATIONS:

-- = Not analyzed/applicable/measured/available

< = Not detected at or above specified laboratory reporting limit

DO = Dissolved oxygen

DTW = Depth to water in ft bgs

ft bgs = Feet below ground surface

GRO = Gasoline range organics, range C4-C12

GWE = Groundwater elevation measured in ft

mg/L = Milligrams per liter

MTBE = Methyl tert-butyl ether

NP = Well not purged before sampling

P = Well purged before sampling

Semi-VOCs = Semivolatile organic compounds

TOC = Top of casing in ft

TPH-g = Total petroleum hydrocarbons as gasoline

g/L = Micrograms per liter

ND = Not detected above the various semi-VOCs laboratory reporting limits

#### FOOTNOTES:

a = Sheen in well.

b = Well is dry.

c = Insufficient water to sample.

d = Chromatogram Pattern: Gasoline C6-C10.

e = Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.

g = TPH, benzene, toluene, ethylbenzene, and total xylenes (BTEX), and MTBE analyzed by EPA Method 8260B beginning on the 1st quarter 2003 sampling event (1/23/03).

h = This sample was re-extracted beyond the EPA recommended holding time. The results may still be useful for their intended purpose.

i = GWE adjusted using the formula GWE = (TOC-DTW) + (free product (FP) thickness x 0.8).

j = Sample contains a higher boiling point hydrocarbon mixture quantitated as gasoline. The chromatogram did not match the typical gasoline fingerprint.

k = DO reading not taken due to the presence of sheen.

l = FP in well.

m = Gauged with ORC sock in well.

n = Method reporting limit for benzene, toluene, ethylbenzene, and/or total xylenes was raised due to high analyte concentration requiring sample dilution or matrix interference.

o = Well dewatered.

p = Well inaccessible.

q = Insufficient sample available to follow standard QC procedures.

r = Wells resurveyed February 27, 2004.

s = Reporting limits elevated due to matrix interferences (SVOCs).

t = Sample preserved improperly.

u = Reporting limits raised due to high level of non-target analytes (SVOCs) .

v = Wells surveyed June 23, 2009.

w = Quantitation of unknown hydrocarbon(s) in sample based on baseline.

#### NOTES:

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported.

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12.

Values for DO and pH were obtained through field measurements.

Top and bottom of screen measurements for wells MW-1 to MW-3, and MW-7 were taken from Delta Environmental Consulting Inc. sampling sheets because the well construction logs were not available.

GRO analysis was completed by EPA method 8260B (C4-C12) for samples collected from the time period April 2006 through February 4, 2008. The analysis for GRO was changed to EPA method 8015B (C6-C12) for samples collected from the time period February 5, 2008 through the present.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

**SYMBOLS & ABBREVIATIONS :**

-- = Not analyzed/applicable/measured/available  
< = Not detected at or above specified laboratory reporting limit.  
1,2-DCA = 1,2-Dichloroethane  
DIPE = Di-isopropyl ether  
EDB = 1,2-Dibromoethane  
ETBE = Ethyl tert-butyl ether  
MTBE = Methyl tert-butyl ether  
TAME = tert-Amyl methyl ether  
TBA = tert-Butyl alcohol  
µg/L = Micrograms per Liter

**FOOTNOTES:**

a = The sample was re-extracted beyond the EPA recommended holding time. The results may still be useful for their intended purpose.  
b = Calibration verification for ethanol was within method limits but outside contract limits.  
c = Original analysis for ethanol was a positive result. Reanalysis did not confirm.  
d = Sample preserved improperly.  
e = FP in well.  
f = Insufficient water to sample.  
g = Well was dry.  
h = Reporting limits raised due to high level of non-target analytes (SVOCs) .

**NOTES:**

All volatile organic compounds analyzed using EPA Method 8260B.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

### Groundwater Sampling Data Sheet

Well I.D.:

MW-1

Project Name/Location:

601

Project #: 06-88-605

Sampler's Name:

SB & EF

Date: 7/22/10

Purging Equipment:

bunker

Sampling Equipment:

bunker

Casing Type: PVC

Casing Diameter:

4 inch

#### \*UNIT CASING VOLUMES

2" = 0.16 gal/lin ft.

3" = 0.37 gal/lin ft.

4" = 0.65 gal/lin ft.

6" = 1.47 gal/lin ft.

Total Well Depth:

11.02 feet

Depth to Water:

8.43 feet

Water Column Thickness:

= 2.59 feet

Unit Casing Volume\*:

x 0.65 gallon / foot

Casing Water Volume:

= gallons

Casing Volume:

x 3 each

Estimated Purge Volume: = gallons

Free product measurement (if present):

Purged (gallons)	Time (24:00)	DO	ORP (mV)	Fe	Conductance (µS)	Temperature (Fahrenheit)	pH	Observations
0	1204	0.49	-22	—	872.5	72.8	7.0	
		X	X	X				
		X	X	X				
		X	X	X				
		X	X	X				
		X	X	X				
		X	X	X				
		X	X	X				

Total Water Volume Purged: NP gallons

Depth to Water at Sample Collection: — feet

Sample Collection Time: 12(6) Purged Dry? (Y/N)

## BROADBENT & ASSOCIATES INC. FIELD PROCEDURES

### A.1 QUALITY ASSURANCE/QUALITY CONTROL FIELD PROTOCOLS

Field protocols have been implemented to enhance the accuracy and reliability of data collection, ground-water sample collection, transportation and laboratory analysis. Discussion of these protocols is provided below.

#### A.1.1 Water Level & Free-Product Measurement

Prior to ground-water sample collection from each monitoring well, the presence of separate-phase hydrocarbons (SPH or free product, FP) and depth to ground water shall be measured. Depth to ground water will be measured with a standard water level indicator that has been decontaminated prior to its use in accordance with procedures discussed below. Depth to groundwater will be gauged from a saw cut notch at the top of the well casing on each well head. Where FP is suspected, the initial gauging will be done with an oil-water interface probe. Once depth to water has been measured, the first retrieval of a new disposable bailer will be scrutinized for the presence of SPH/FP.

#### A.1.2 Monitoring Well Purging

Subsequent to measuring depth to ground water and prior to the collection of ground-water samples, purging of standing water within the monitoring well will be performed if called for. Consistent with the American Society for Testing and Materials (ASTM) Standard D6452-99, Section 7.1, the well will be purged of approximately three wetted-casing volumes of water, or until the well is dewatered, or until monitored field parameters indicate stabilization. The well will be purged using a pre-cleaned disposable bailer or submersible pump and disposable plastic tubing dedicated to each individual well. The well will be purged at a low flow rate to minimize the possibility of purging the well dry. So that the sample collected is representative of formation water, several field parameters will be monitored during the purging process. The sample will not be collected until these parameters (i.e. temperature, pH, and conductivity) have stabilized to within 10% of the previously measured value. If a well is purged dry, the sample should not be collected until the well has recovered to a minimum 50% of its initial volume.

#### A.1.3 Ground-Water Sample Collection

Once the wells are satisfactorily purged, water samples will be collected from each well. Water samples for organic analyses will be collected using a pre-cleaned, new, disposable bailer and transferred into the appropriate, new, laboratory-prepared containers such that no head space or air bubbles are present in the sample container (if appropriate to the analysis). The samples will be properly labeled (i.e. sample identification, sampler initials, date/time of collection, site location, requested analyses), placed in an ice chest with bagged ice or ice substitute, and delivered to the contracted analytical laboratory.

#### A.1.4 Surface Water Sample Collection

Unless specified otherwise, surface water samples will be collected from mid-depth in the central area of the associated surface water body. Water samples will be collected into appropriate, new, laboratory-prepared containers by dipping the container into the surface water unless the container has a preservative present. If a sample preservative is present, a new, cleaned non-preserved surrogate container will be used to obtain the sample which will then be directly transferred into a new, laboratory-provided, preserved container. Samples will be properly labeled and transported as described above.

#### A.1.5 Decontamination Protocol

Prior to use in each well, re-usable ground-water sampling equipment (e.g., water level indicator, oil-interface probe, purge pump, etc.) will be decontaminated. Decontamination protocol will include thoroughly cleaning with a solution of Liquinox, rinsing with clean water, and final rinsing with control water (potable water of known quality, distilled, or de-ionized water). Pre-cleaned new disposable bailers and disposable plastic tubing will be dedicated to each individual well.

#### A.1.6 Chain of Custody Procedures

Sample identification documents will be carefully prepared so identification and chain of custody can be maintained and sample disposition can be controlled. The sample identification documents include Chain-of-Custody (COC) records and Daily Field Report forms. Chain of custody procedures are outlined below.

##### Field Custody Procedures

The field sampler is individually responsible for the care and custody of the samples collected until they are properly transferred.

Samples will have unique labels. The information on these labels will correspond to the COC which shows the identification of individual samples and the contents of the shipping container. The original COC will accompany the shipment and a copy will be retained by the field sampler.

##### Transfer of Custody and Shipment

A COC will accompany samples during transfer and shipment. When transferring samples, the individual relinquishing and the individual receiving the samples will each sign, date, and note the time on the COC. This documents the sample custody transfer.

Samples will be packaged properly for shipment and dispatched to the appropriate laboratory for analysis, with a separate COC accompanying each shipment. Shipments will be accompanied by the original COC. Samples will be delivered by BAI personnel to the laboratory, or shipped by responsible courier. When a shipping courier is utilized, the sample shipment number will be identified on the COC.

#### A.1.7 Field Records

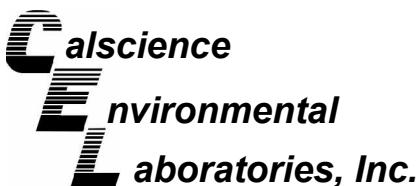

In addition to sample identification numbers and COC records, Daily Field Report records will be maintained by field staff to provide daily records of significant events, observations, and measurements during field investigations. These documents will contain observed information such as: the personnel present, site conditions, sampling procedures, measurement procedures, calibration records, equipment used, supplies used, etc. Field measurements will be recorded on the appropriate forms. Entries on the data forms will be signed and dated. The data forms will be kept as permanent file records.

Subject: **Calscience Work Order No.: 10-07-1717**  
Client Reference: **BP 601**

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 7/23/2010 and analyzed in accordance with the attached chain-of-custody.

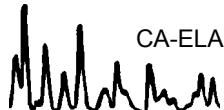

Calscience Environmental Laboratories certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

A handwritten signature in black ink that appears to read "Richard Villafania" followed by "for".

RPD - Relative Percent Difference , CL - Control Limit

## Glossary of Terms and Qualifiers

Work Order Number: 10-07-1717

<u>Qualifier</u>	<u>Definition</u>
AX	Sample too dilute to quantify surrogate.
BA	Relative percent difference out of control.
BA,AY	BA = Relative percent difference out of control. AY = Matrix interference suspected.
BB	Sample > 4x spike concentration.
BF	Reporting limits raised due to high hydrocarbon background.
BH	Reporting limits raised due to high level of non-target analytes.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
BY	Sample received at improper temperature.
BZ	Sample preserved improperly.
CL	Initial analysis within holding time but required dilution.
CQ	Analyte concentration greater than 10 times the blank concentration.
CU	Surrogate concentration diluted to not detectable during analysis.
DF	Reporting limits elevated due to matrix interferences.
DU	Insufficient sample quantity for matrix spike/dup matrix spike.
ET	Sample was extracted past end of recommended max. holding time.
EY	Result exceeds normal dynamic range; reported as a min est.
GR	Internal standard recovery is outside method recovery limit.
IB	CCV recovery above limit; analyte not detected.
IH	Calibrn. verif. recov. below method CL for this analyte.
IJ	Calibrn. verif. recov. above method CL for this analyte.
J,DX	J=EPA Flag -Estimated value; DX= Value < lowest standard (MQL), but > than MDL.
LA	Confirmatory analysis was past holding time.
LG,AY	LG= Surrogate recovery below the acceptance limit. AY= Matrix interference suspected.
LH,AY	LH= Surrogate recovery above the acceptance limit. AY= Matrix interference suspected.
LM,AY	LM= MS and/or MSD above acceptance limits. See Blank Spike (LCS). AY= Matrix interference suspected.
LN,AY	LN= MS and/or MSD below acceptance limits. See Blank Spike (LCS). AY= Matrix interference suspected.
LQ	LCS recovery above method control limits.
LR	LCS recovery below method control limits.

Work Order Number: 10-07-1717

---

<u>Qualifier</u>	<u>Definition</u>
LW	Quantitation of unknown hydrocarbon(s) in sample based on gasoline.
LX	Quantitation of unknown hydrocarbon(s) in sample based on diesel.
MB	Analyte present in the method blank.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
PC	Sample taken from VOA vial with air bubble > 6mm diameter.
PI	Primary and confirm results varied by > than 40% RPD.
RB	RPD exceeded method control limit; % recoveries within limits.
SG	A silica gel cleanup procedure was performed. Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

## SAMPLE ANOMALY FORM

### SAMPLES - CONTAINERS & LABELS:

- Sample(s)/Container(s) NOT RECEIVED but listed on COC
- Sample(s)/Container(s) received but NOT LISTED on COC
- Holding time expired – list sample ID(s) and test
- Insufficient quantities for analysis – list test
- Improper container(s) used – list test
- Improper preservative used – list test
- No preservative noted on COC or label – list test & notify lab
- Sample labels illegible – note test/container type
- Sample label(s) do not match COC – Note in comments
  - Sample ID
  - Date and/or Time Collected
  - Project Information
  - # of Container(s)
  - Analysis
- Sample container(s) compromised – Note in comments
  - Water present in sample container
  - Broken
  - Without Label(s)
- Air sample container(s) compromised – Note in comments
  - Flat
  - Very low in volume
  - Leaking (Not transferred - duplicate bag submitted)
  - Leaking (transferred into Calscience Tedlar® Bag\*)
  - Leaking (transferred into Client's Tedlar® Bag\*)
- Other: \_\_\_\_\_

### Comments:

(-1) RECEIVED 8 CONTAINERS

2 x 1 AgB UNPRESERVED +  
6 x VDA w/ HCl

(-2) → (-1) RECEIVED

6 x VDA w/ HCl

### HEADSPACE – Containers with Bubble > 6mm or ¼ inch:

Sample #	Container ID(s)	# of Vials Received	Sample #	Container ID(s)	# of Vials Received	Sample #	Container ID(s)	# of Cont. received	Analysis

Comments: \_\_\_\_\_

\*Transferred at Client's request.

WELL ID	DATE MEAS	TOC ELEV (feet)	DT SPH (feet)	DTW (feet)	SPH THICK (feet)	GW ELEV (feet)	TPH-G (ug/L)	BENZENE (ug/L)	TOLUENE (ug/L)	ETHYLBENZENE (ug/L)	TOTAL XYLEMES (ug/L)	MTBE (ug/L)	DO (mg/l)	ORP (mV)	COMMENTS
---------	-----------	-----------------	---------------	------------	------------------	----------------	--------------	----------------	----------------	---------------------	----------------------	-------------	-----------	----------	----------

Abbreviations:

TPH-G = total petroleum hydrocarbons as gasoline –analyzed using California DHS LUFT Method, EPA Method 8015M, EPA Method 8260B, or as total purgeable petroleum hydrocarbons (TPPH) by EPA Method 8260B.

BTEX = Benzene, toluene, ethylbenzene, xylenes by EPA Method 8260B; prior to April 24, 2001, analyzed by EPA Method 8020.

MTBE = Methyl tertiary butyl ether

TOC = Top of Casing Elevation

SPH = Separate-Phase Hydrocarbons

GW = Groundwater

DO = Dissolved Oxygen

ug/L = Parts per billion

MSL = Mean sea level

ppm = Parts per million

ft. = Feet

< n = Below detection limit

(D) = Duplicate sample

NA = Not applicable

Notes:

a = Chromatogram pattern indicated an unidentified hydrocarbon.

g = Analyzed by EPA Method 8015B (M).

h = The sample chromatographic pattern for TPH does not match the chromatographic pattern of the specified standard. Quantitation of the unknown hydrocarbon(s) in the sample was based upon the specified standard.

i = Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.

Site surveyed March 18, 2002 by Virgil Chavez Land Surveying of Vallejo, CA.

J = Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
