Re: Third Quarter 2011 Monitoring Report, Atlantic Richfield Company Station #601,  
712 Lewelling Boulevard, San Leandro, Alameda County, California;  
ACEH Case #RO0000309

Dear Ms. Couch:

Attached is the *Third Quarter 2011 Monitoring Report* for Atlantic Richfield Company Station #601 located at 712 Lewelling Boulevard, San Leandro, California (Site). Should you have questions regarding the work performed or results obtained, please do not hesitate to contact us at (707) 455-7290.

Sincerely,  
BROADBENT & ASSOCIATES, INC.

**THIRD QUARTER 2011  
MONITORING REPORT**  
**ATLANTIC RICHFIELD COMPANY STATION #601**  
**SAN LEANDRO, CALIFORNIA**

Broadbent & Associates, Inc. (BAI) is pleased to present this *Third Quarter 2011 Monitoring Report* on behalf of Atlantic Richfield Company (a BP affiliated company) for Station #601 located in San Leandro, Alameda County, California. Monitoring activities at the site were performed in accordance with the reporting requirements issued by the Alameda County Environmental Health (ACEH). Details of work performed, discussion of results, and recommendations are provided below.

Facility Name / Address:	Station #601 / 712 Lewelling Boulevard, San Leandro, California
Client Project Manager / Title:	Ms. Shannon Couch / Operations Project Manager
BAI Contact:	Tom Sparrowe, P.G., (707) 455-7290
BAI Project No.:	06-88-605
Primary Regulatory Agency / ID No.:	ACEH / Case #RO0000309
Current phase of project:	Monitoring
List of Acronyms / Abbreviations:	See end of report text for list of acronyms/abbreviations used in report.

**WORK PERFORMED THIS QUARTER (Third Quarter 2011):**

1. Submitted *Second Quarter 2011 Status Report* on July 29, 2011.
2. BAI conducted Third Quarter groundwater sampling/monitoring on August, 25, 2011. Station #601 work coordinated with Former Shell Station #129460 monitoring event.

**WORK SCHEDULED FOR NEXT QUARTER (Fourth Quarter 2011):**

1. Submit *Third Quarter 2011 Groundwater Monitoring Report* (contained herein).
2. No environmental work is scheduled for 4Q11.

**GROUNDWATER MONITORING PLAN SUMMARY:**

Groundwater level gauging:	MW-1 through MW-3 and MW-8 through MW-19	(1Q & 3Q)
Groundwater sample collection:	MW-1, MW-3, MW-10, MW-16, MW-17, and MW-18	(1Q & 3Q)
	MW-2, MW-8, MW-9, MW-14, MW-15, and MW-19	(3Q)

Biodegradation indicator parameter monitoring:

None

**QUARTERLY RESULTS SUMMARY:**

**LNAPL**

LNAPL observed this quarter:	No	(yes\no)
LNAPL recovered this quarter:	N/A	(gal)
Cumulative LNAPL recovered:	N/A	(gal)

**Groundwater Elevation and Gradient:**

Depth to groundwater:	5.96 ft (MW-3) to 9.43 ft (MW-14)	(ft below TOC)
Gradient direction:	Southwest	(compass direction)
Gradient magnitude:	0.003	(ft/ft)
Average change in elevation:	-0.39	(ft since last measurement)

**Laboratory Analytical Data**

Summary:	GRO was detected above reporting limits in wells MW-1, MW-2, MW-3, MW-16, MW-17, and MW-18. Benzene was detected above reporting limits in wells MW-1, MW-16, MW-17, and MW-18. MTBE was detected above reporting limits in wells MW-8, MW-9, MW-10, MW-15, MW-17, and MW-18.
----------	---

## ACTIVITIES CONDUCTED & RESULTS:

Third Quarter 2011 groundwater monitoring was conducted on August 25, 2011 by BAI personnel in accordance with the monitoring plan summary detailed above. Concurrent monitoring and sampling was also conducted at the nearby Former Shell Service Station #129460 by Conestoga Rover & Associates. No irregularities were noted during water level gauging. Light Non-Aqueous Phase Liquid (LNAPL) was not noted to be present in the wells monitored during this event; however, a light sheen was observed in wells MW-1 and MW-3. Depth to water measurements ranged from 5.96 ft at MW-3 to 9.43 ft at MW-14. Resulting groundwater surface elevations ranged from 15.65 ft at MW-15 to 19.08 ft at MW-19. Groundwater elevations are summarized in Table 1. Water level elevations yielded a potentiometric groundwater gradient to the southwest at approximately 0.003 ft/ft. Water level elevations from the Former Shell Station #129460 are based on a survey referencing the older National Geodetic Vertical Datum of 1929 (NGVD29) and could not be used with the Station #601 water level elevations which reference the newer North American Vertical Datum of 1988 (NAVD88, the vertical datum preferred by AB2886 for use in GeoTracker). Field methods used during groundwater monitoring are provided in Appendix A. Field data sheets and Non-Hazardous Waste Data Form are included in Appendix B. A Site Location Map is presented as Drawing 1. Potentiometric groundwater elevation contours are presented in Drawing 2.

Groundwater samples collected on August 25, 2011 were consistent with the current monitoring schedule. No irregularities were reported during sampling. Samples were submitted under chain-of-custody protocol to Calscience Environmental Laboratories, Inc. of Garden Grove, California for analysis of Gasoline-Range Organics (GRO, C6-C12) by EPA Method 8015M; for Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX), Methyl Tertiary Butyl Ether (MTBE), Ethyl Tertiary Butyl Ether (ETBE), Tert-Amyl Methyl Ether (TAME), Di-Isopropyl Ether (DIPE), 1,2-Dibromomethane (EDB), 1,2-Dichloroethane (1,2-DCA), Tert-Butyl Alcohol (TBA) and Ethanol by EPA Method 8260. Sample MW-1 was also analyzed for Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270. No significant irregularities were encountered during analysis of the samples. The laboratory analytical report, including chain-of-custody documentation, is provided in Appendix C. Co-monitored analytic data from the Former Shell Station #129460 are included in Appendix D.

Hydrocarbons in the GRO range were detected above the laboratory reporting limit in six wells sampled at concentrations up to 20,000 micrograms per liter ( $\mu\text{g/L}$ ) in well MW-3. Benzene was detected above the laboratory reporting limit in four wells sampled at concentrations up to 140  $\mu\text{g/L}$  in well MW-17. Toluene was only detected above the laboratory reporting limit in MW-16 at a concentration of 17  $\mu\text{g/L}$ . Ethylbenzene was detected above the laboratory reporting limit in six wells at concentrations up to 850  $\mu\text{g/L}$  in well MW-3. Total Xylenes were detected above the laboratory reporting limit in four wells sampled at concentrations up to 1600  $\mu\text{g/L}$  in well MW-3. MTBE was detected above the laboratory reporting limit in five wells sampled at concentrations up to 4.9  $\mu\text{g/L}$  in well MW-18. TAME was detected above the laboratory reporting limit in one well sampled at a concentration of 4.8  $\mu\text{g/L}$  in well MW-18. SVOCs consisting of Bis(2-Ethylhexyl) Phthalate, 1-Methylnaphthalene, 2-Methylnaphthalene and Naphthalene were detected above the laboratory reporting limit in MW-1 at concentrations of 64  $\mu\text{g/L}$ , 370  $\mu\text{g/L}$ , 230  $\mu\text{g/L}$  and 80  $\mu\text{g/L}$ , respectively. The remaining analytes were not detected above their laboratory reporting limits in the wells sampled this last monitoring event. Groundwater monitoring laboratory analytical results are summarized in Table 1 and Table 2. The most recent GRO, Benzene, and MTBE concentrations are also presented in Drawing 2. Groundwater monitoring data (GEO\_WELL) and laboratory analytical results (EDF) were uploaded to the GeoTracker AB2886 database. Upload confirmation receipts are provided in Appendix E.

## DISCUSSION:

Groundwater levels were between historic minimum and maximum elevations for all wells with the exception of MW-19. MW-19 reached a historic maximum groundwater elevation of 19.08 ft. This observed historic maximum is probably due to seasonal changes in groundwater elevations. Groundwater elevations yielded a potentiometric groundwater gradient to the southwest at approximately 0.003 ft/ft, generally consistent with the historic gradient data presented in Table 3.

This event's detected analytical concentrations were within the historic minimum and maximum ranges recorded for each well, with the following exceptions: MW-8 had a historic minimum concentration of MTBE at 0.52 µg/L and MW-16 had historic maximum concentrations of Toluene (17 µg/L) and Total Xylenes (48 µg/L). Recent and historic laboratory analytical results are summarized in Table 1 and Table 2.

## RECOMMENDATIONS:

No environmental work activities are scheduled to be conducted at the Site during the Fourth Quarter 2011. The next quarterly monitoring event is scheduled for the First Quarter 2012. Unless directed by ACEH, no change to the monitoring program at Station #601 is presently deemed warranted or recommended.

## LIMITATIONS:

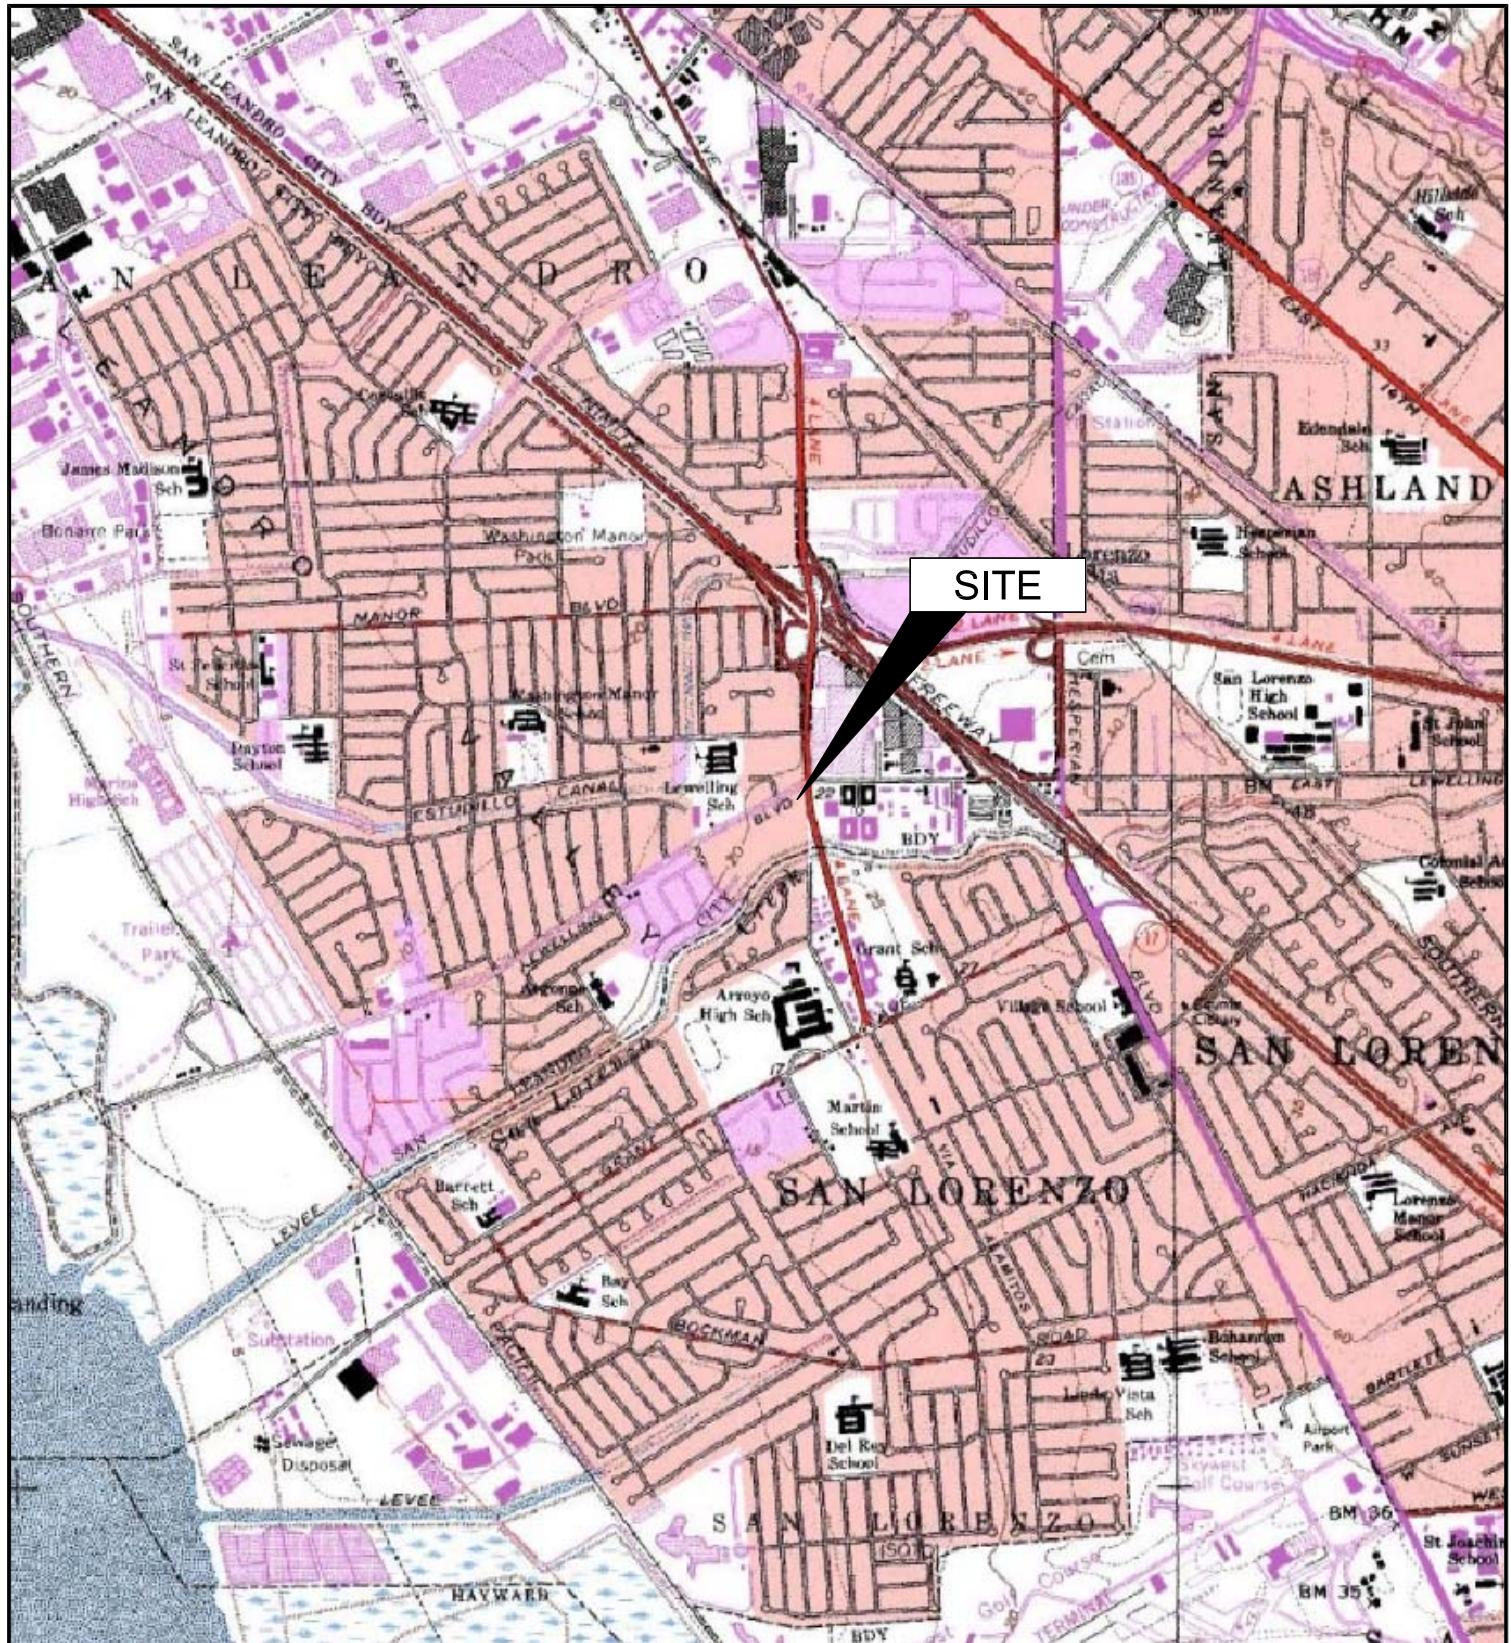

The findings presented in this report are based upon observations of field personnel, points investigated, results of laboratory tests performed by Calscience Environmental Laboratories, Inc. (Garden Grove, California), and our understanding of ACEH requirements. Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of the Atlantic Richfield Company. It is possible that variations in soil or groundwater conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

Symbols & Abbreviations:

-- = Not analyzed/applicable/measured/available  
< = Not detected at or above specified laboratory reporting limit  
DO = Dissolved oxygen  
DTW = Depth to water in ft bgs  
ft bgs = Feet below ground surface  
GRO = Gasoline range organics, range C4-C12  
GWE = Groundwater elevation measured in ft  
mg/L = Milligrams per liter  
MTBE = Methyl tert-butyl ether  
NP = Well not purged before sampling  
P = Well purged before sampling  
Semi-VOCs = Semivolatile organic compounds  
TOC = Top of casing in ft  
TPH-g = Total petroleum hydrocarbons as gasoline  
g/L = Micrograms per liter  
ND = Not detected above the various semi-VOCs laboratory reporting limits

Footnotes:

a = Sheen in well  
b = Well is dry  
c = Insufficient water to sample  
d = Chromatogram Pattern: Gasoline C6-C10  
e = Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel  
g = TPH, benzene, toluene, ethylbenzene, and total xylenes (BTEX), and MTBE analyzed by EPA Method 8260B beginning on the 1st quarter 2003 sampling event (1/23/03)  
h = This sample was re-extracted beyond the EPA recommended holding time. The results may still be useful for their intended purpose  
i = GWE adjusted using the formula GWE = (TOC-DTW) + (free product (FP) thickness x 0.8)  
j = Sample contains a higher boiling point hydrocarbon mixture quantitated as gasoline. The chromatogram did not match the typical gasoline fingerprint  
k = DO reading not taken due to the presence of sheen  
l = FP in well  
m = Gauged with ORC sock in well  
n = Method reporting limit for benzene, toluene, ethylbenzene, and/or total xylenes was raised due to high analyte concentration requiring sample dilution or matrix interference  
o = Well dewatered  
p = Well inaccessible  
q = Insufficient sample available to follow standard QC procedures  
r = Wells resurveyed February 27, 2004  
s = Reporting limits elevated due to matrix interferences (SVOCs)  
t = Sample preserved improperly  
u = Reporting limits raised due to high level of non-target analytes (SVOCs)  
v = Wells surveyed June 23, 2009  
w = Quantitation of unknown hydrocarbon(s) in sample based on baseline  
x = Quantitated against gasoline

Notes:

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12

Values for DO and pH were obtained through field measurements

Top and bottom of screen measurements for wells MW-1 to MW-3, and MW-7 were taken from Delta Environmental Consulting Inc. sampling sheets because the well construction logs were not available

GRO analysis was completed by EPA method 8260B (C4-C12) for samples collected from the time period April 2006 through February 4, 2008. The analysis for GRO was changed to EPA method 8015B (C6-C12) for

samples collected from the time period February 5, 2008 through the present

The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information

Symbols & Abbreviations:

-- = Not analyzed/applicable/measured/available  
< = Not detected at or above specified laboratory reporting limit.  
1,2-DCA = 1,2-Dichloroethane  
DIPE = Di-isopropyl ether  
EDB = 1,2-Dibromoethane  
ETBE = Ethyl tert-butyl ether  
MTBE = Methyl tert-butyl ether  
TAME = tert-Amyl methyl ether  
TBA = tert-Butyl alcohol  
µg/L = Micrograms per Liter

Footnotes:

a = The sample was re-extracted beyond the EPA recommended holding time. The results may still be useful for their intended purpose  
b = Calibration verification for ethanol was within method limits but outside contract limits  
c = Original analysis for ethanol was a positive result. Reanalysis did not confirm  
d = Sample preserved improperly  
e = FP in well  
f = Insufficient water to sample  
g = Well was dry  
h = Reporting limits raised due to high level of non-target analytes (SVOCs)

Notes:

All volatile organic compounds analyzed using EPA Method 8260B

**APPENDIX A**  
**FIELD METHODS**

## BROADBENT & ASSOCIATES INC. FIELD PROCEDURES

### A.1 QUALITY ASSURANCE/QUALITY CONTROL FIELD PROTOCOLS

Field protocols have been implemented to enhance the accuracy and reliability of data collection, ground-water sample collection, transportation and laboratory analysis. Discussion of these protocols is provided below.

#### A.1.1 Water Level & Free-Product Measurement

Prior to ground-water sample collection from each monitoring well, the presence of separate-phase hydrocarbons (SPH or free product, FP) and depth to ground water shall be measured. Depth to ground water will be measured with a standard water level indicator that has been decontaminated prior to its use in accordance with procedures discussed below. Depth to groundwater will be gauged from a saw cut notch at the top of the well casing on each well head. Where FP is suspected, the initial gauging will be done with an oil-water interface probe. Once depth to water has been measured, the first retrieval of a new disposable bailer will be scrutinized for the presence of SPH/FP.

#### A.1.2 Monitoring Well Purging

Subsequent to measuring depth to ground water and prior to the collection of ground-water samples, purging of standing water within the monitoring well will be performed if called for. Consistent with the American Society for Testing and Materials (ASTM) Standard D6452-99, Section 7.1, the well will be purged of approximately three wetted-casing volumes of water, or until the well is dewatered, or until monitored field parameters indicate stabilization. The well will be purged using a pre-cleaned disposable bailer or submersible pump and disposable plastic tubing dedicated to each individual well. The well will be purged at a low flow rate to minimize the possibility of purging the well dry. So that the sample collected is representative of formation water, several field parameters will be monitored during the purging process. The sample will not be collected until these parameters (i.e. temperature, pH, and conductivity) have stabilized to within 10% of the previously measured value. If a well is purged dry, the sample should not be collected until the well has recovered to a minimum 50% of its initial volume.

#### A.1.3 Ground-Water Sample Collection

Once the wells are satisfactorily purged, water samples will be collected from each well. Water samples for organic analyses will be collected using a pre-cleaned, new, disposable bailer and transferred into the appropriate, new, laboratory-prepared containers such that no head space or air bubbles are present in the sample container (if appropriate to the analysis). The samples will be properly labeled (i.e. sample identification, sampler initials, date/time of collection, site location, requested analyses), placed in an ice chest with bagged ice or ice substitute, and delivered to the contracted analytical laboratory.

#### A.1.4 Surface Water Sample Collection

Unless specified otherwise, surface water samples will be collected from mid-depth in the central area of the associated surface water body. Water samples will be collected into appropriate, new, laboratory-prepared containers by dipping the container into the surface water unless the container has a preservative present. If a sample preservative is present, a new, cleaned non-preserved surrogate container will be used to obtain the sample which will then be directly transferred into a new, laboratory-provided, preserved container. Samples will be properly labeled and transported as described above.

#### A.1.5 Decontamination Protocol

Prior to use in each well, re-usable ground-water sampling equipment (e.g., water level indicator, oil-interface probe, purge pump, etc.) will be decontaminated. Decontamination protocol will include thoroughly cleaning with a solution of Liquinox, rinsing with clean water, and final rinsing with control water (potable water of known quality, distilled, or de-ionized water). Pre-cleaned new disposable bailers and disposable plastic tubing will be dedicated to each individual well.

#### A.1.6 Chain of Custody Procedures

Sample identification documents will be carefully prepared so identification and chain of custody can be maintained and sample disposition can be controlled. The sample identification documents include Chain-of-Custody (COC) records and Daily Field Report forms. Chain of custody procedures are outlined below.

##### Field Custody Procedures

The field sampler is individually responsible for the care and custody of the samples collected until they are properly transferred.

Samples will have unique labels. The information on these labels will correspond to the COC which shows the identification of individual samples and the contents of the shipping container. The original COC will accompany the shipment and a copy will be retained by the field sampler.

##### Transfer of Custody and Shipment

A COC will accompany samples during transfer and shipment. When transferring samples, the individual relinquishing and the individual receiving the samples will each sign, date, and note the time on the COC. This documents the sample custody transfer.

Samples will be packaged properly for shipment and dispatched to the appropriate laboratory for analysis, with a separate COC accompanying each shipment. Shipments will be accompanied by the original COC. Samples will be delivered by BAI personnel to the laboratory, or shipped by responsible courier. When a shipping courier is utilized, the sample shipment number will be identified on the COC.

#### A.1.7 Field Records

In addition to sample identification numbers and COC records, Daily Field Report records will be maintained by field staff to provide daily records of significant events, observations, and measurements during field investigations. These documents will contain observed information such as: the personnel present, site conditions, sampling procedures, measurement procedures, calibration records, equipment used, supplies used, etc. Field measurements will be recorded on the appropriate forms. Entries on the data forms will be signed and dated. The data forms will be kept as permanent file records.

Calscience Environmental Laboratories certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety. Note that the Chain-of-Custody Record and Sample Receipt Form are integral parts of this report.

RPD - Relative Percent Difference , CL - Control Limit

## Glossary of Terms and Qualifiers

Work Order Number: 11-08-1981

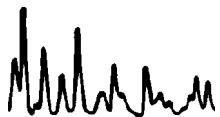

---

<u>Qualifier</u>	<u>Definition</u>
AX	Sample too dilute to quantify surrogate.
BA	Relative percent difference out of control.
BA,AY	BA = Relative percent difference out of control. AY = Matrix interference suspected.
BB	Sample > 4x spike concentration.
BF	Reporting limits raised due to high hydrocarbon background.
BH	Reporting limits raised due to high level of non-target analytes.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
BY	Sample received at improper temperature.
BZ	Sample preserved improperly.
CL	Initial analysis within holding time but required dilution.
CQ	Analyte concentration greater than 10 times the blank concentration.
CU	Surrogate concentration diluted to not detectable during analysis.
DF	Reporting limits elevated due to matrix interferences.
DU	Insufficient sample quantity for matrix spike/dup matrix spike.
ET	Sample was extracted past end of recommended max. holding time.
ET	Sample was extracted past end of recommended maximum holding time.
EY	Result exceeds normal dynamic range; reported as a min est.
GR	Internal standard recovery is outside method recovery limit.
IB	CCV recovery above limit; analyte not detected.
IH	Calibrn. verif. recov. below method CL for this analyte.
IJ	Calibrn. verif. recov. above method CL for this analyte.
J,DX	J=EPA Flag -Estimated value; DX= Value < lowest standard (MQL), but > than MDL.
LA	Confirmatory analysis was past holding time.
LG,AY	LG= Surrogate recovery below the acceptance limit. AY= Matrix interference suspected.
LH,AY	LH= Surrogate recovery above the acceptance limit. AY= Matrix interference suspected.
LM,AY	LM= MS and/or MSD above acceptance limits. See Blank Spike (LCS). AY= Matrix interference suspected.
LN,AY	LN= MS and/or MSD below acceptance limits. See Blank Spike (LCS). AY= Matrix interference suspected.
LQ	LCS recovery above method control limits.
LR	LCS recovery below method control limits.
LW	Quantitation of unknown hydrocarbon(s) in sample based on gasoline.
LX	Quantitation of unknown hydrocarbon(s) in sample based on diesel.
MB	Analyte present in the method blank.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
PC	Sample taken from VOA vial with air bubble > 6mm diameter.
PI	Primary and confirm results varied by > than 40% RPD.
RB	RPD exceeded method control limit; % recoveries within limits.
SG	A silica gel cleanup procedure was performed.

QualifierDefinition

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

## SAMPLE ANOMALY FORM

**SAMPLES - CONTAINERS & LABELS:**
**Comments:**

- Sample(s)/Container(s) NOT RECEIVED but listed on COC \_\_\_\_\_
- Sample(s)/Container(s) received but NOT LISTED on COC \_\_\_\_\_
- Holding time expired – list sample ID(s) and test \_\_\_\_\_
- Insufficient quantities for analysis – list test \_\_\_\_\_
- Improper container(s) used – list test \_\_\_\_\_
- Improper preservative used – list test \_\_\_\_\_
- No preservative noted on COC or label – list test & notify lab \_\_\_\_\_
- Sample labels illegible – note test/container type \_\_\_\_\_
- Sample label(s) do not match COC – Note in comments
  - Sample ID \_\_\_\_\_
  - Date and/or Time Collected \_\_\_\_\_
  - Project Information \_\_\_\_\_
  - # of Container(s) \_\_\_\_\_
  - Analysis \_\_\_\_\_
- Sample container(s) compromised – Note in comments
  - Water present in sample container \_\_\_\_\_
  - Broken \_\_\_\_\_
- Sample container(s) not labeled \_\_\_\_\_
- Air sample container(s) compromised – Note in comments
  - Flat \_\_\_\_\_
  - Very low in volume \_\_\_\_\_
  - Leaking (Not transferred - duplicate bag submitted) \_\_\_\_\_
  - Leaking (transferred into Calscience Tedlar® Bag\*) \_\_\_\_\_
  - Leaking (transferred into Client's Tedlar® Bag\*) \_\_\_\_\_

Notes:

TPHg = Total petroleum hydrocarbons as gasoline analyzed by EPA Method 8260B; prior to April 24, 2001, analyzed by EPA Method 8015 unless otherwise noted.

BTEX = Benzene, toluene, ethylbenzene, and total xylenes analyzed by EPA Method 8260B; prior to April 24, 2001, analyzed by EPA Method 8020.

MTBE = Methyl tertiary-butyl ether analyzed by method noted

TOC = Top of casing elevation, in feet relative to mean sea level

SPH = Separate-phase hydrocarbon

GW = Groundwater

DO = Dissolved oxygen

µg/L = Micrograms per liter

MSL = Mean sea level

mg/L = Milligrams per liter

ft = Feet

(D) = Duplicate sample

TABLE 1

<x = Not detected at reporting limit x

--- = Not analyzed or available

a = Chromatogram pattern indicated an unidentified hydrocarbon.

b = Pre-development measurement

c = Post-development measurement

f = TOC lowered 0.08 feet due to wellhead maintenance on June 3, 2004.

g = Analyzed by EPA Method 8015B (M).

h = The sample chromatographic pattern for TPH does not match the chromatographic pattern of the specified standard. Quantitation of the unknown hydrocarbon(s) in the sample was based upon the specified standard.

i = Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.

j = Purge sample

Wells S-11, S-12, S-14, S-15 and SV-1 surveyed March 18, 2002 by Virgil Chavez Land Surveying
