**Subject: Third Quarter 2012 Groundwater Monitoring Report**  
**Fuel Leak Case No. R0000320, Former Paco Pumps,**  
**Inc.**  
**9201 San Leandro Street, Oakland, CA**

Dear Mr. Detterman:

Please find enclosed the *Third Quarter 2012 Groundwater Monitoring Report (GMR)* for the Former Paco Pumps facility located at 9201 San Leandro in Oakland, California, Case No. R0000320. The September 2012 monitoring data, which have been uploaded to Geotracker, represent groundwater conditions more than two years after the dual-phase extraction (DPE) was conducted near and downgradient of the former gasoline underground storage tank (UST) area, previously referred to as AREA 4. The results of the sampling as described in the attached report document essentially similar conditions to the previous sampling event.

Pending ACEH's review of proposed additional soil gas sampling and downgradient well drilling, the next field task will consist of semi-annual groundwater sampling in March 2013. Additionally, SGI will review this Site's applicability to the low threat closure conditions for UST sites.

I certify under penalty of law that this document and all attachments are prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who managed the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,

Dave Murray  
On behalf of and as agent for  
PCC Flow Technologies, Inc.

## 1.0 INTRODUCTION

This report presents the results of the September 2012 groundwater monitoring and sampling event, and includes a section on data interpretation and recommendations. The September 2012 monitoring event was conducted per instruction from Alameda County Environmental Health (ACEH) and following recommendations from The Source Group, Inc. (SGI), and was performed to further evaluate groundwater conditions following 2010 dual-phase extraction (DPE) activities.

## 2.0 SITE REMEDIATION SUMMARY

In 1992, the gasoline underground storage tank (UST) at the Site was removed, and soil around the former UST was excavated. Multiple phases of investigation, including pilot testing, have been conducted to evaluate the elevated petroleum hydrocarbon concentrations that remained in the subsurface following these activities.

Although a workplan for in-situ treatment was submitted in 2009, a revised workplan was submitted in November 2009 (The Source Group, October 2009). Due to the predominance of clay, in-situ remedial methods were not considered applicable for the Site, and a temporary, aggressive extraction approach, rather than semi-permanent low-flow remediation methods, were proposed. In 2010, 12 extraction wells were installed in the vicinity and downgradient of the former UST. In April and June 2010, dual phase extraction (DPE) of vapor and groundwater was conducted, resulting in the removal of an estimated 1,590 pounds of hydrocarbons, and approximately 41,000 gallons of hydrocarbon-bearing groundwater. The remediation activities confirmed that the subsurface consists of fine-grained (low permeability) vadose soil that would limit the effectiveness of any in-situ active remediation method.

An evaluation of the hydrocarbon concentrations, including benzene, in the subsurface, and potential exposures via indoor air inhalation, indicated that the associated human health risk estimates were within acceptable ranges. At the request of ACEH, a Workplan (*Sub-Slab Vapor Survey and Remedial Investigation Workplan* [RI Workplan, SGI, January 2012]) for subslab soil gas sampling was submitted to ACEH to confirm the previous soil gas interpretations.

On May 10, 2012, the ACEH provided comments to the RI Workplan. Following the May 10, 2012 ACEH request, RI Workplan modifications were submitted on June 20, 2012 and are pending ACEH approval.

### 3.0 GROUNDWATER MONITORING (SEPTEMBER 2012)

Provided below are the activities and results of the groundwater monitoring performed in September 2012:

1. Conducted the third quarter 2012 groundwater monitoring and sampling event on September 13, 2012.
2. Depth to groundwater measured in September 2012 was similar to previous measurements and ranged from approximately 8.10 to 10.10 feet below the top of well casings. Associated groundwater elevations ranged from 8.84 to 11.08 feet above Mean Sea Level. Groundwater elevation contours are presented on Figure 3 and are similar to previous groundwater gradient maps. The horizontal hydraulic gradient was toward the southwest at approximately 0.005 feet per foot (ft/ft) with local variations. As noted in recent monitoring events, no free-phase hydrocarbons were measured in any of the wells.
3. Gasoline-range organics (GRO, total petroleum hydrocarbons as gasoline [TPHg]) were reported in wells MW-3, MW-4, MW-6, E3, E6, E7, E8 and E12. Concentrations were generally within historic ranges with concentrations ranging from 34.3 to 12,800 µg/L (Figure 4 and Table 2). Since the first quarter of 2012, GRO concentrations increased in well MW-4, MW-6, E6, E7, E8, and E12 and decreased in wells MW-3 and E3.
4. Diesel-range organics (DRO, total petroleum hydrocarbons as diesel [TPHd]) were reported in 12 of the 15 wells sampled. Where reported, concentrations were generally within historic ranges with concentrations ranging from 83 to 62,500 µg/L (Table 2). Since the first quarter of 2012, DRO concentrations increased slightly at well MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-8, AS-1D, E3, E7, E8 and E12. DRO was not reported at detected concentrations in samples collected from wells MW-7, E2, and E6
5. Total petroleum hydrocarbons as motor oil [TPHmo] were reported in 5 of the 15 wells sampled. Where reported, concentrations were generally within historic ranges with concentrations ranging from 3,510 to 93,700 µg/L (Table 2). Since the first quarter of 2012, TPHmo concentrations increased in wells MW-3, MW-7, E2, E3, and E6. TPHmo was not reported at detected concentrations in samples collected from wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-8, AS-1D, E7, E8, and E12.
6. Benzene was reported in 9 of the 15 well samples. Concentrations were generally within historic ranges with concentrations ranging from 0.37 to 677 µg/L (Figure 4 and Table 2). Since the first quarter of 2012, benzene concentrations decreased in wells MW-3, E3, E6, and E8 and increased in wells MW-4, MW-6, MW-8, E7, and E12. Benzene was not reported at detected concentrations in samples collected from wells MW-1, MW-2, MW-5, MW-7, AS-1D, and E2.
7. Methyl tertiary-butyl ether (MTBE) was reported in 8 of the 15 well samples (see Table 2). Where reported, concentrations ranged from 0.20 to 3.5 µg/L, which are below State drinking water standards. Since the first quarter of 2012, MTBE concentrations increased

in all 8 of the wells sampled, MW-2, MW-7, MW-8, E2, E3, E6, E7, and E8. MTBE was not reported at detected concentrations in samples collected from wells MW-1, MW-3, MW-4, MW-5, MW-6, AS-1D, and E12.

8. 1,2-Dichloroethane (1,2-DCA) was reported in 4 of the 15 wells samples. Where reported, concentrations ranged from 0.36 to 5.8 µg/L (Table 2). Since the first quarter 2012 sampling event, concentrations of 1,2-DCA decreased in well MW-6 and increased in wells E2, E3, and E7. 1,2-DCA was not reported at detected concentrations in samples collected from wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-7, MW-8, AS-1D, E6, E8, and E12.

#### 4.0 MONITORING SUMMARY

Provided below in tabular format is a summary of monitoring results from sampling conducted in September 2012 at the Site.

Current Phase of Project:	Groundwater Monitoring
Frequency of Monitoring/Sampling:	Semi-annual (per SGI recommendation after Q1 2012 Sampling)
Wells Sampled and/or Gauged this Quarter	MW-1 through MW-8, AS-1D E1, E2, E3, E6, E7, E8, and E12
Depth to Groundwater (all wells had no LPH):	8.29 to 10.07 feet below top of casings
Groundwater Gradient Direction/Magnitude:	Southwest at approximately 0.005 ft/ft
Gradient Consistent w/Previous Quarters:	Yes
GRO Concentration Range:	34.3 µg/L to 12,800 µg/L
Well with Highest GRO Concentration:	MW-3
Benzene Concentration Range:	0.37 µg/L to 677 µg/L
Well with Highest Benzene Concentration:	MW-3
MTBE Concentration Range:	0.20 µg/L to 3.5 µg/L
Well with Highest MTBE Concentration:	E7
Separate Phase Hydrocarbons Present: Yes   No <input checked="" type="checkbox"/>	None
Maximum Hydrocarbon Thickness:	N/A
Wells and/or Surface Water within 2,000 feet:	None
Distance and Direction from Site:	N/A
Current Remediation Techniques:	Natural Attenuation
Free Product Recovered Manually this Quarter:	None
Gallons of Groundwater Purged this Quarter:	165.9
Disposal/Recycling Facility:	Demenno Kerdoon, Compton, CA-Pending
Summary of Unusual Activity:	None
Agency Directive Requirements:	Groundwater Monitoring, RI Workplan (submitted)

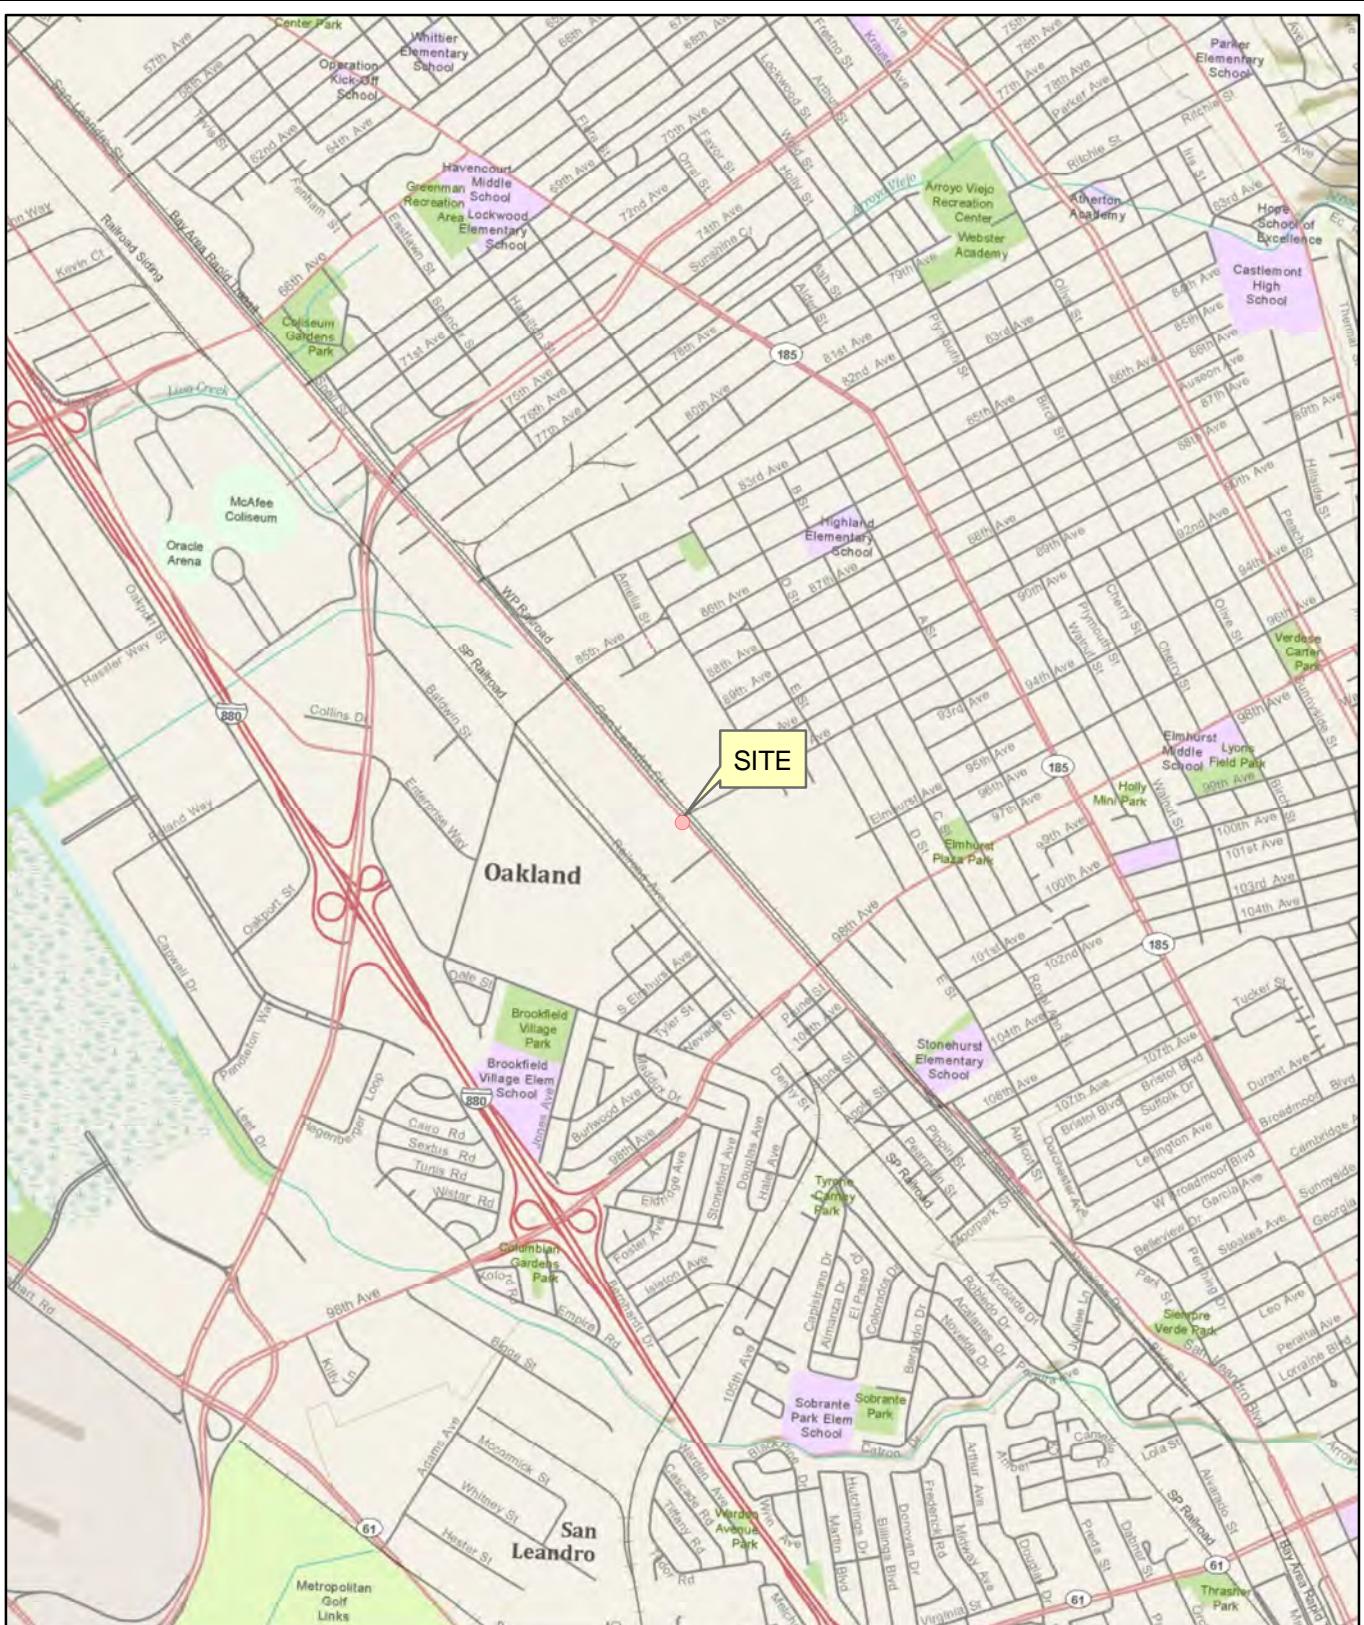

## 5.0 RECOMMENDATIONS

SGI recommends that all wells at the site continue to be sampled on a semi-annual basis. Additional RI tasks will be conducted after ACEH approval of the June 20, 2012 RI Workplan modifications. The Site will also be evaluated under the recently approved low threat closure guidance document.

## 6.0 LIMITATIONS

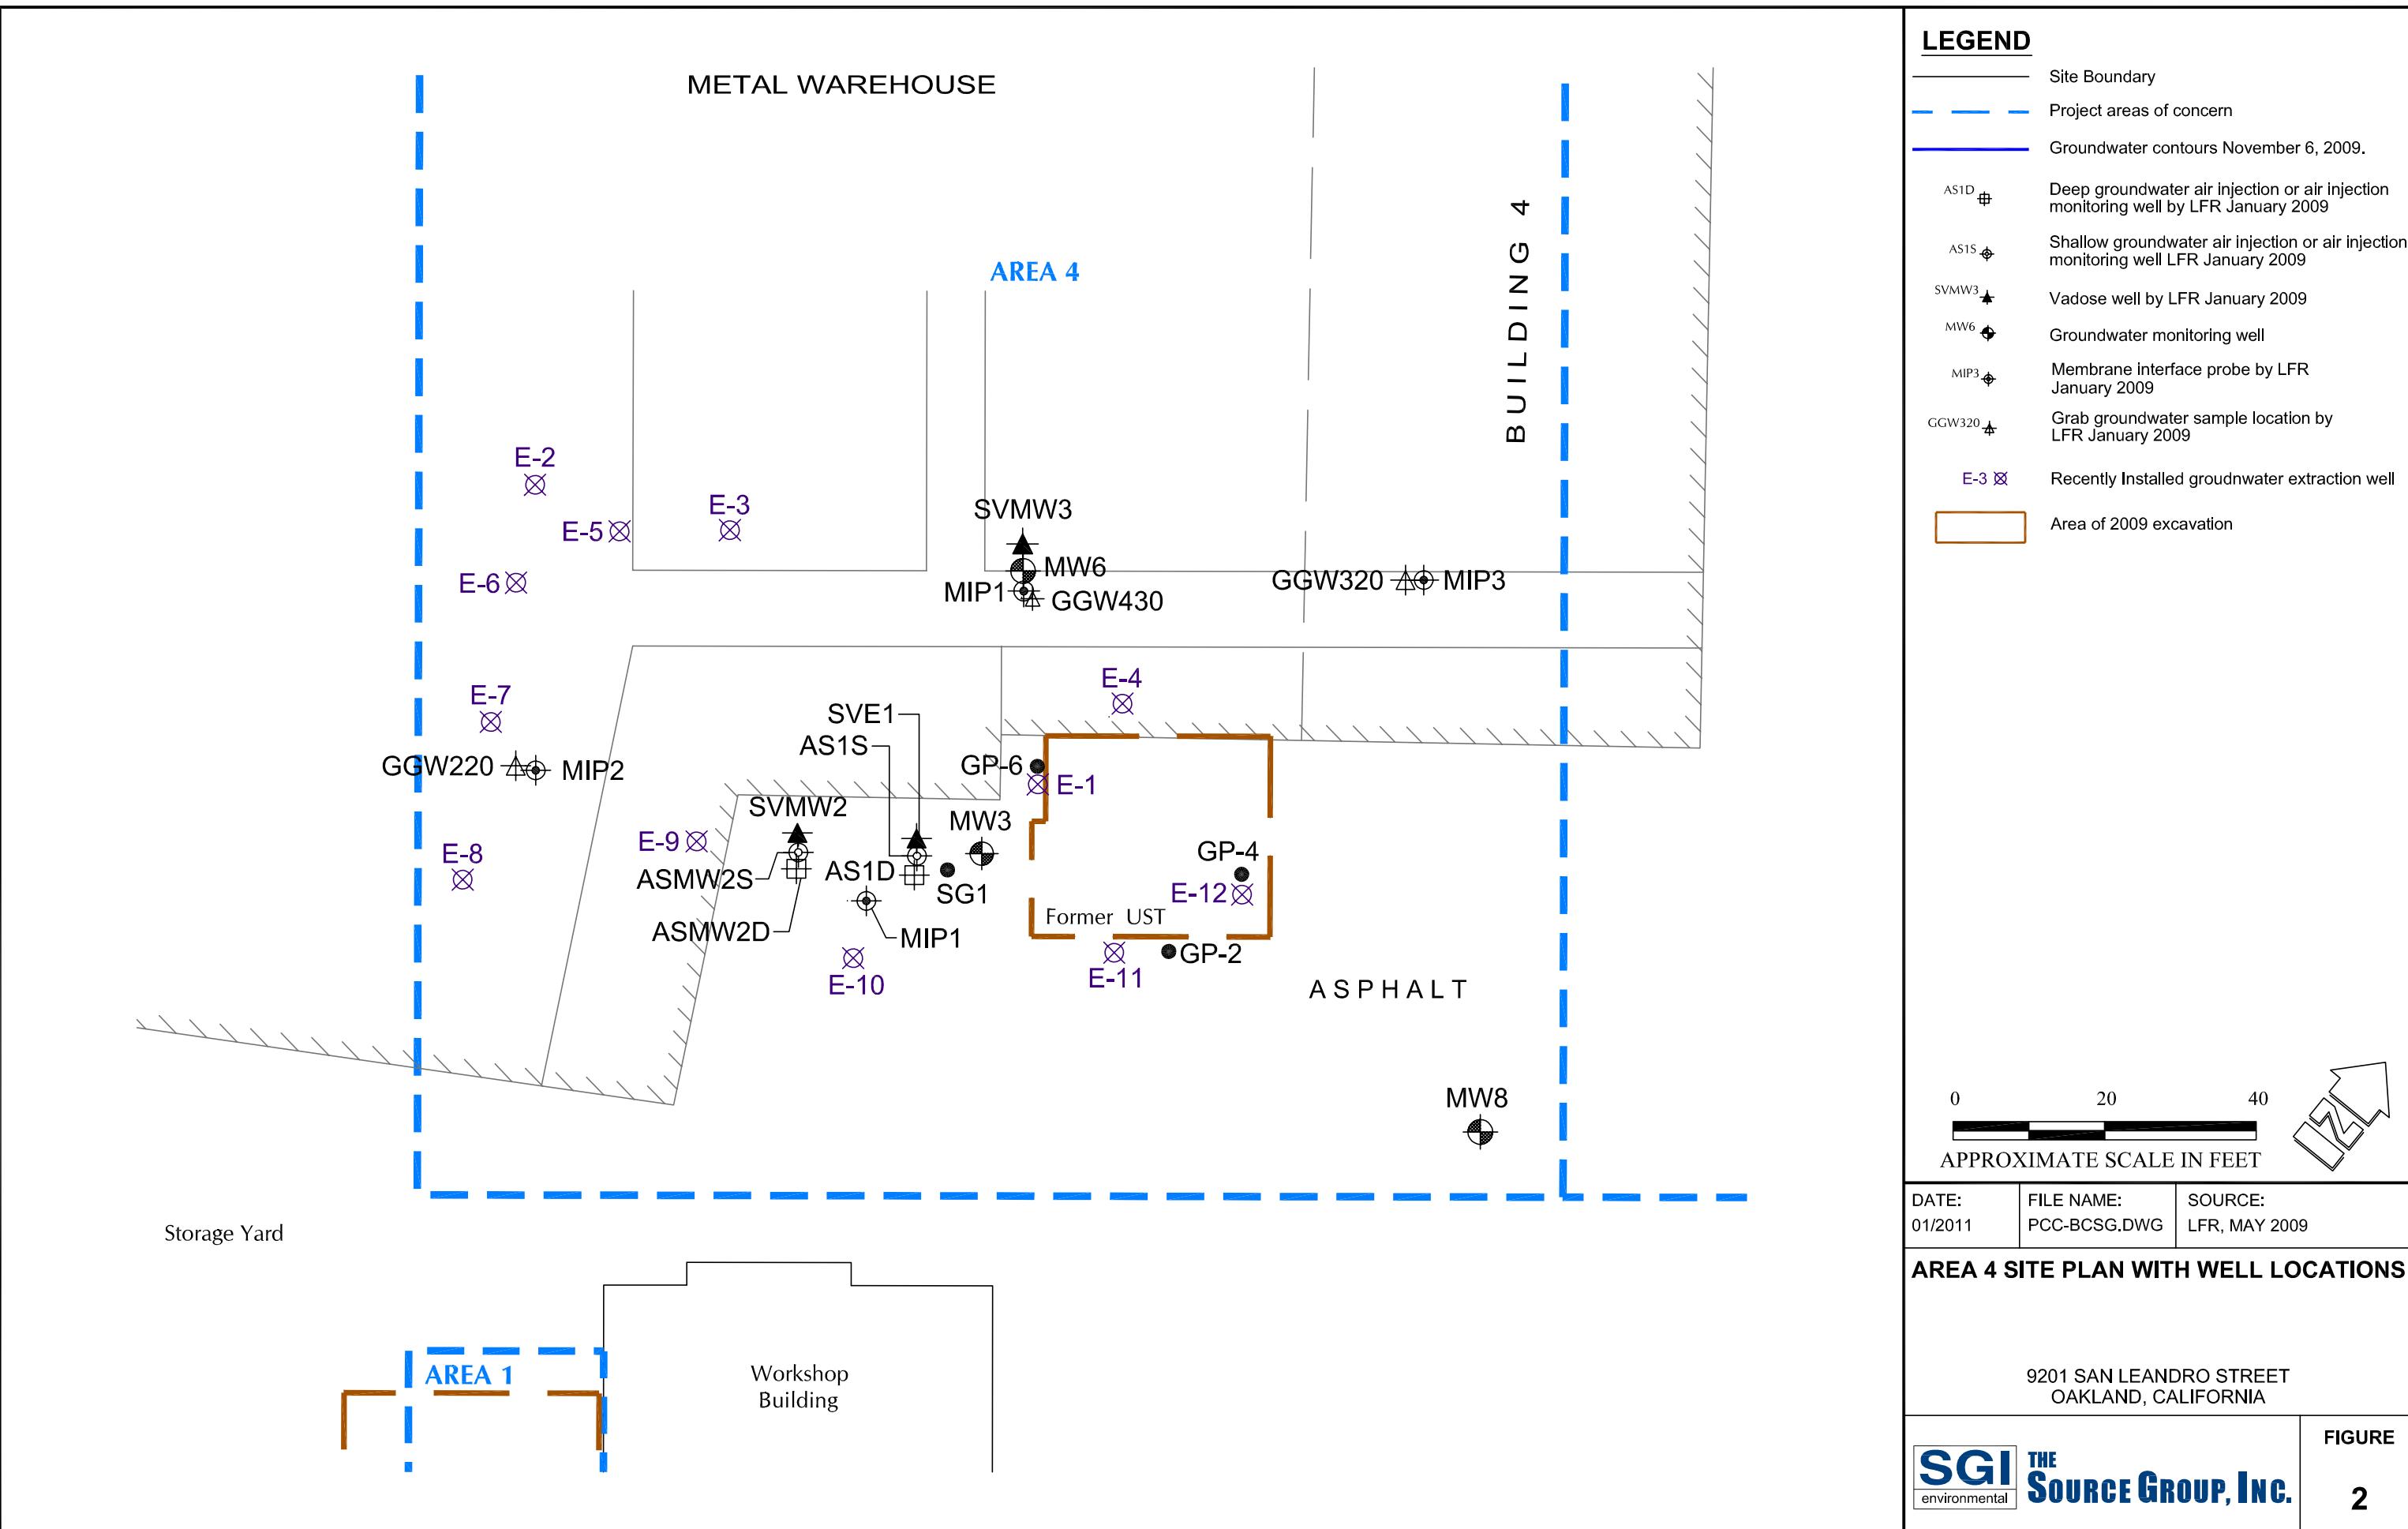

This document was prepared for the exclusive use of PCC Flow Technologies (PCC) and Alameda County Environmental Health (ACEH) for the express purpose of complying with a client- or regulatory directive for environmental investigation or restoration. SGI and PCC must approve any re-use of this work product in whole or in part for a different purpose or by others in writing. If any such unauthorized use occurs, it shall be at the user's sole risk without liability to SGI or PCC. To the extent that this report is based on information provided to SGI by third parties, including PCC, their direct contractors, previous workers, and other stakeholders, SGI cannot guarantee the completeness or accuracy of this information, even where efforts were made to verify third-party information. SGI has exercised professional judgment to collect and present findings and opinions of a scientific and technical nature. The opinions expressed are based on the conditions of the Site existing at the time of the field investigation, current regulatory requirements, and any specified assumptions. The presented findings and recommendations in this report are intended to be taken in their entirety to assist PCC and ACEH personnel in applying their own professional judgment in making decisions related to the property. SGI cannot provide conclusions on environmental conditions outside the completed scope of work. SGI cannot guarantee that future conditions will not change and affect the validity of the presented conclusions and recommended work. No warranty or guarantee, whether expressed or implied, is made with respect to the data or the reported findings, observations, conclusions, and recommendations.

**C23650-16      TB-1**

No hits reported in this sample.

- (a) Atypical Diesel pattern (C12-C36); heavier hydrocarbons contributing to quantitation.
- (b) Diesel pattern is not present; higher boiling gasoline compounds in Diesel range.
- (c) Motor oil mixed with multiple discrete peaks.
- (d) Atypical Diesel pattern (C12-C28); heavier hydrocarbons contributing to quantitation.

## TPH Extractable

CAS No.	Compound	Result	RL	MDL	Units	Q
	TPH (Diesel) <sup>a</sup>	5.04	0.94	0.47	mg/l	
	TPH (Motor Oil)	4.71	1.9	0.94	mg/l	

CAS No.	Surrogate Recoveries	Run# 1	Run# 2	Limits
630-01-3	Hexacosane	61%		45-140%

(a) Diesel pattern is not present; higher boiling gasoline compounds in Diesel range.

ND = Not detected      MDL - Method Detection Limit  
 RL = Reporting Limit  
 E = Indicates value exceeds calibration range

J = Indicates an estimated value  
 B = Indicates analyte found in associated method blank  
 N = Indicates presumptive evidence of a compound

Run #1	1050 ml	1.0 ml
Run #2		

## TPH Extractable

CAS No.	Compound	Result	RL	MDL	Units	Q
	TPH (Diesel) <sup>a</sup>	0.0888	0.095	0.048	mg/l	J
	TPH (Motor Oil)	ND	0.19	0.095	mg/l	
CAS No.	Surrogate Recoveries		Run# 1	Run# 2	Limits	
630-01-3	Hexacosane		70%		45-140%	

(a) Diesel pattern is not present; higher boiling gasoline compounds in Diesel range.

ND = Not detected      MDL - Method Detection Limit  
 RL = Reporting Limit  
 E = Indicates value exceeds calibration range

J = Indicates an estimated value  
 B = Indicates analyte found in associated method blank  
 N = Indicates presumptive evidence of a compound
