**SUBJECT:** Results of Quarterly Groundwater Monitoring, August 1994  
Former Penske Truck Leasing Facility  
725 Julie Ann Way, Oakland, California.

Dear Mr. Chan:

The above referenced report is being forwarded to you at the request of Penske Truck Leasing Co. The report details the results of the quarterly groundwater monitoring well sampling for August 1994 at the former Penske Truck Leasing Facility at 725 Julie Ann Way, Oakland. The quarterly sampling has been completed in response to the requirements for groundwater sampling contained in the Alameda County Health Care Services, Department of Environmental Health letter to Penske dated October 24, 1989.

If you have any questions, please do not hesitate to call.

Sincerely,  
**GERAGHTY & MILLER, INC.**

  
Paul V. Hehn  
Project Geologist/Project Manager

**SUBJECT:** Results of Quarterly Groundwater Monitoring, August 1994  
Former Penske Truck Leasing Facility  
725 Julie Ann Way, Oakland, California.

Dear Mr. Saut:

This report presents the results of the quarterly groundwater monitoring performed on September 12, 1994, at the former Penske Truck Leasing Co. (Penske) facility referenced above (Figure 1). The scope of work for this project was presented to Penske in a Geraghty & Miller, Inc. (Geraghty & Miller) letter dated July 2, 1992. The monitoring program consists of collecting quarterly depth-to-water measurements and water samples from the eight monitor wells located at the project site. Three of these groundwater monitor wells were installed during July 1994 as part of a program of additional site assessment activities and implementation of a Non-Attainment Zone remedial approach approved by the Alameda County Health Care Services Agency (ACHCSA) and the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB).

#### **FIELD PROCEDURES**

The quarterly groundwater monitoring was performed on September 12, 1994. Groundwater samples were collected from Monitor Wells MW-1 through MW-8. The monitor-well locations are shown in Figure 2.

Prior to sampling, depth-to-water and total-well-depth measurements were obtained from each well. Additionally, the wells were checked for the presence of liquid-phase hydrocarbons. Liquid-phase hydrocarbons were not observed in any of the wells during this monitoring event. Each well sampled was purged of approximately three to four casing volumes of water using a

1-inch diaphragm pump. All equipment that entered the well was washed in a solution of nonphosphate detergent and water and then triple rinsed in deionized water prior to sampling each well. Purged water was monitored for pH, temperature, and specific conductance. A summary of the field data is presented in Table 1. Following purging, groundwater samples were collected using a disposable polyethylene bailer, with a new bailer used for each well. The purged water was stored in 55-gallon drums and retained onsite for subsequent disposal by Penske.

A trip blank, consisting of a sample vial containing laboratory-grade water, accompanied the sample vials from the laboratory to the site and back to the laboratory, and was also submitted for analysis. The purpose of the trip blank is to assess whether any of the compounds analyzed for may have been imparted to the samples by air in the vicinity of the sample bottles during shipping, by the sample container, by the preservative, or by other exogenous sources.

Groundwater samples were put into the appropriate USEPA-approved containers, placed on ice, and transported to Superior Precision Analytical, Inc., in San Francisco, California, along with appropriate chain-of-custody documentation. The water samples were analyzed for total petroleum hydrocarbons (TPH) as gasoline (USEPA Method 8015, modified), for TPH as diesel (USEPA Method 8015, modified), for benzene, toluene, ethylbenzene, and total xylenes (BTEX) (USEPA Method 8020), and for total dissolved solids (USEPA Method 160.1).

## RESULTS

### **SHALLOW GROUNDWATER FLOW**

A summary of the depth-to-water data is presented in Table 1. Depth to water ranged from 5.89 feet (Monitor Well MW-5) to 7.42 feet (Monitor Well MW-2) below the ground surface. A contour map based on the groundwater elevation data collected September 12, 1994, is presented in Figure 2. The historic shallow groundwater flow is toward the west, however, there are local variations in flow directions at the facility as indicated by the groundwater contours from the data collected on September 12, 1994.

The difference in the elevation of the groundwater surface between Wells MW-2 and MW-4 is 0.15 feet, producing a hydraulic gradient (slope of the groundwater surface) of approximately 0.0016 foot/foot in a west-northwesterly direction.

## GROUNDWATER ANALYTICAL RESULTS

A summary of the groundwater analytical results is presented in Table 2. Copies of the certified laboratory reports and chain-of-custody documentation are included in Attachment 1. TPH as gasoline was detected in the groundwater samples collected from Monitor Wells MW-1 (230 micrograms per liter [ $\mu\text{g/L}$ ]), MW-4 (390  $\mu\text{g/L}$ ), MW-7 (160  $\mu\text{g/L}$ ), and MW-8 (170  $\mu\text{g/L}$ ). TPH as diesel was detected in the groundwater samples collected from Monitor Wells MW-1 (22,000  $\mu\text{g/L}$ ), MW-4 (95  $\mu\text{g/L}$ ), MW-7 (620  $\mu\text{g/L}$ ), and MW-8 (850  $\mu\text{g/L}$ ). Benzene was detected in the groundwater samples collected from Monitor Wells MW-1 (0.7  $\mu\text{g/L}$ ), MW-4 (120  $\mu\text{g/L}$ ), MW-7 (2.7  $\mu\text{g/L}$ ), and MW-8 (2.7  $\mu\text{g/L}$ ). All other BTEX constituent results are presented in Table 2. TPH as gasoline and BTEX were not detected in the trip blank. Additional analysis of total dissolved solids in the groundwater samples detected concentrations ranging from 560 milligrams per liter (mg/L) from Monitor Well MW-6 to 6,000 mg/L from Monitor Well MW-4 (Table 2).

## FIELD PARAMETERS

As in all previous quarterly sampling events at this facility, the specific conductance measurements for the groundwater purged during the sampling (except for Monitor Well MW-6) continue to be high (Table 1). The high specific conductance measurements were verified by correspondingly high concentrations of total dissolved solids detected in the groundwater samples (Table 2).

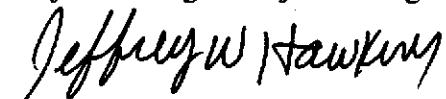

Geraghty & Miller appreciates the opportunity to be of service to Penske. If you have any questions regarding this report, please do not hesitate to call us.

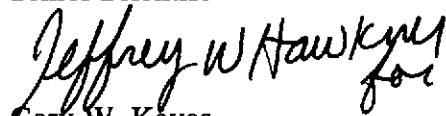

Sincerely,

**Table 2: Summary of Groundwater Analytical Results - Monthly and Quarterly Sampling**  
 Former Penske Truck Leasing Facility,  
 725 Julie Ann Way, Oakland, California.

Well	Date	TPH Gasoline (a) ( $\mu\text{g/L}$ )	TPH Diesel (a) ( $\mu\text{g/L}$ )	Benzene (b) ( $\mu\text{g/L}$ )	Toluene (b) ( $\mu\text{g/L}$ )	Ethyl- benzene (b) ( $\mu\text{g/L}$ )	Xylenes (b) ( $\mu\text{g/L}$ )	Total Dissolved Solids (c) ( $\text{mg/L}$ )
MW-6	12-Sep-94	ND(<50)	ND(<50)	ND(<0.5)	ND(<0.5)	ND(<0.5)	ND(<0.5)	560
MW-7	12-Sep-94		160	620	2.7	1.3	ND(<0.5)	2.1
MW-8	12-Sep-94		170	850	2.7	0.5	ND(<0.5)	2.0

(a) Analyzed by USEPA Method 8015, modified.

(b) Analyzed by USEPA Method 8020.

(c) Analyzed by USEPA Method 160.1

(d) No results - sample for TPH as diesel not collected.

(e) Diesel range concentration reported. A nonstandard diesel pattern was observed in the chromatogram.

(f) Does not match typical gasoline pattern. Pattern of peaks observed in the chromatograms are indicative of hydrocarbons heavier than gasoline.

(g) Detection limit increased due to insufficient sample amount.

(h) Diesel range concentration reported. The chromatogram shows only a single peak in the diesel range.

( ) Reported detection limit
