RE: Work Plan for Additional Soil and Groundwater Investigation

Former Penske Truck Leasing Facility 725 Julie Ann Way Oakland, California Alameda County Site ID RO0000364

Dear Mr. Khatri:

Stantec Consulting Corporation (Stantec) on behalf of Penske Truck Leasing Company (Penske), is submitting this *Work Plan for Additional Soil and Groundwater Investigation* for the site located at 725 Julie Ann Way in Oakland, California (the Site; Figures 1 and 2). Stantec prepared this Work Plan in response to concerns presented by Alameda County Environmental Health Services (ACEHS) in a letter dated April 8, 2008 (Appendix A). The letter was received in response to SECOR's *Request for Conditional Site Closure* document dated March 2, 2004. The tasks outlined in this Work Plan were discussed with the ACEHS during a conference call with Penske and Stantec on August 14, 2008.

This Work Plan includes the findings of a preferential pathway study, a well survey, and an evaluation of historical land use as requested by the ACEHS. In addition, the findings of the preferential pathway study have been incorporated into the proposed scope of work.

FINDINGS OF THE PREFERENTIAL PATHWAY STUDY AND ASSOCIATED TASKS

This section described the methods and findings of work tasks recently completed by Stantec at the request of the ACEHS.

Geophysical Investigation

On November 20, 2008, a geophysical investigation was performed at the Site by NORCAL Geophysical Consultants (Norcal). The objective of the geophysical investigation was to assist identify previously undocumented potential migration pathways and conduits that may permit vertical and lateral subsurface movement of chemical constituents. The geophysical investigation report is included as Appendix B. Subsurface conduits identified during the

Work Plan for Additional Soil and Groundwater Investigation

Mr. Paresh Khatri February 5, 2009 Page 2 of 9

investigation were added to the Site Plan in Figure 2. Prior to the geophysical investigation, proposed soil borings locations SB-1 through SB-7 were marked in the field and surveyed by Norcal in order to evaluate their distance to any additional subsurface features identified by the geophysical investigation.

The investigation was conducted using a combination of terrain conductivity (TC), ground penetrating radar (GPR), and hand-held metal detection methods; further details of the methods can be found in Appendix B. A summary of the findings are as follows:

- □ Underground Utilities: Seven previously undocumented subsurface features were identified as possible utility lines: six that trend east-west, and one that trends northwest-southeast. Two lines extend from the west corner of the Site building, one extending northwest and the other southwest, and are suspected to be active. The remaining five lines are located in the vicinity of the former tank excavation and due to their locations are suspected to have been associated with use of the former diesel or unleaded gasoline tank. Based on the identification of these utilities, an additional soil boring SB-8 is proposed in the vicinity of the utility lines and soil boring SB-7 has been moved further north; further details are illustrated on Figure 2 and described in the proposed scope of work.
- □ Former Tank Pits: Analysis of GPR data has identified an anomalous feature that may correspond to the presence of backfill materials associated with the larger tank excavation. This GPR anomaly does not match the previously suspected dimensions of the excavation that is based on the pattern of asphalt repair currently observed at the Site. The GPR data identifies the outline of this anomaly to extend further northwest, and not as elongated (towards the north?) as current asphalt repair pattern would indicate. Based on this finding, proposed soil boring SB-7 has been moved further north, in order to evaluate subsurface conditions in the vicinity of the anomaly. In addition and as describe above, SB-7 is proposed to be located between two previously unidentified subsurface conduits. A second anomaly was also identified approximately 22 feet northwest of the above-mentioned anomaly (see Figure 2). Due to the location of this second anomaly away from the former UST excavation, Stantec does not consider it relevant to the proposed scope of work.

Well Survey

Based on information from the Geotracker website provided by the State Water Resources Control Board (SWRCB), the following is a description of one monitoring well located within a ¼-mile of the Site:

□ Volvo GM Heavy Truck, 750 50th Avenue/5050 Coliseum Way, Oakland, California: This site maintains an annual self-monitoring program for California Assessment Manual (CAM) 17 metals and total petroleum hydrocarbons. Of the twelve wells actively being monitored at this site, one well (CW-7) is located approximately ¼-mile northwest of the Site and is being analyzed for CAM Metals arsenic and barium. All other wells appear to be located outside of this ¼-mile radius.

Work Plan for Additional Soil and Groundwater Investigation

Mr. Paresh Khatri February 5, 2009 Page 3 of 9

Based on the Physical Setting Source Map provided in the Radius MapTM with Geocheck^R by Environmental Data Resources, Inc. (EDR; see Appendix C), the following is a description of one water well located within ¼-mile of the Site:

□ Oakport Street: Located approximately ¼-mile southwest of the Site, in the approximate 5800 Block of Oakport Street, a water well that is not a public supply water well is identified. No other information is provided about the well.

Historical Land Use

Based on information gathered from certified Sanborn maps, historical topographic maps, and aerial photographs provided by EDR (see Appendix D), the Site was formerly marshland that has been filled. The infilling of the Site and vicinity is most clearly observed in the aerial photographs dated 1946 and 1958. Present-day on-Site buildings were constructed between 1960 and 1965, and labeled as equipment storage and repair, office, and repair shop for the Independent Construction Company in the Sanborn maps dated 1966, 1968, and 1969. Buildings located in the northwest and southwest corner of Julie Ann Way and present-day Coliseum Way appear on historical maps and aerial photographs at the earliest in 1968 and are presumed to have been constructed between 1966 and 1968. Building development in the southeast corner appears on 1969 Sanborn map. Increases in general Site vicinity development is most markedly observed between the 1966 and 1969 Sanborn maps.

Based on information provided in EDR's City Directory Abstract, the Site operated as Independent Construction and Paving Contractor in 1967 through 1970. From 1970 through 1980, the Site operated in some form as a Hertz truck leasing business and in 1986 operated as a Hertz Penske truck rental and leasing facility. Since at least 1992, the Site has operated by Rock Transport, Inc.

Work Plan for Additional Soil and Groundwater Investigation

Mr. Paresh Khatri February 5, 2009 Page 4 of 9

SCOPE OF WORK

This section provides details for the proposed scope of work for additional soil and groundwater investigation activities requested the ACEHS. Elements of the work scope are based in part on information obtained during the preferential pathway study. The objectives of the proposed scope of work are as follows:

- 1. Assess concentrations of petroleum hydrocarbons in soils following Fenton's reagent treatment applied in October 2000;
- 2. Determine if Site wells are screened appropriately for observation of free-phase product by advancing direct-push soil borings adjacent to monitoring wells for observation of soil and groundwater conditions and comparison of groundwater chemical data; and
- 3. Comply with the ACEHS request to upload historical Site documents to the State Water Resources Control Board's Geotracker database.

The proposed scope of work consists of the following components:

	A subsurface investigation that includes the advancement of eight direct-push soil borings for observation of soil conditions, verification of depth to first-encountered groundwater, and collection of soil and grab groundwater samples;
	Completion of a site-wide groundwater monitoring event;
	Implementation of semi-annual groundwater gauging; and
	Uploading historical Site documents to the Geotracker website.
Γhe fo	llowing tasks describe the proposed scope of work in detail.
Task 1	1 – Preliminary Activities and Utility Survey
Stante	c will perform the following preliminary activities:
	Health and Safety Plan (HASP): A site-specific HASP has been prepared. The HASP prescribes the safe execution of field activities and will be reviewed by the field staff and subcontractors at the beginning of each work day, and before returning to work following the mid-day lunch break.
	Permitting: Stantec will obtain a drilling permit from the Alameda County Public Works Agency.
	USA Notification and Utility Survey: Stantec will mark the locations of the proposed soil borings in white paint, and notify Underground Service Alert (USA) approximately five days before drilling. In addition, Stantec will contract with a private utility locator to confirm that proposed drilling locations are free of detectable subsurface utilities.

Work Plan for Additional Soil and Groundwater Investigation

Mr. Paresh Khatri February 5, 2009 Page 5 of 9

Task 2 - Direct-Push Soil Borings

The subsurface investigation will include eight direct-push soil borings that will be advanced at the locations shown on Figure 3. In order to comply with the ACEHS request for evaluating the ability to observe free-phase product in Site wells, Stantec proposes advancing 3 soil borings (SB-2, SB-6, and SB-5) directly adjacent to monitoring wells MW-1 MW-4, and MW-7, wells that have historically reported the highest concentrations of petroleum hydrocarbons. Based on Stantec's review of historical soil boring logs, first-encountered groundwater occurs at approximately 13 to 18 feet below ground surface (bgs). During historical groundwater monitoring, the static depth-to-water has been measured at approximately 5 to 6 feet bgs. Because wells at the Site are screened from approximately 6 to 10 feet bgs to approximately 35 feet bgs, the ACEHS has expressed concern that free-phase product present on the water table may be present above the screened interval, and therefore not present in the well casing. Soil borings advanced directly adjacent to the monitoring wells will be used to evaluate soil conditions with respect to recent treatment with Fenton's reagent; to confirm the depth of first-encountered and static groundwater levels; and for direct comparison of grab groundwater samples to those collected concurrently from the wells.

An addition, four soil borings (SB-1, SB-3, SB-4, and SB-7) will be advanced at representative locations as illustrated on Figure 3, to evaluate soil conditions in the former Fenton's treatment area, evaluate vadose-zone soil conditions for the presence of coarse-grained materials which may influence subsurface migration of contaminants, and evaluate soil conditions in locations near subsurface features that may have been associated with previous underground tank operations. Soil borings will be advanced approximately five feet into first-encountered groundwater, to a maximum depth of approximately 20 feet bgs.

As stated above, one soil boring (SB-8) is proposed in the vicinity of previously unidentified lines that may have been associated with use of the former diesel or unleaded gasoline tank.

Soil Sampling Procedures

Soil borings will be advanced by a C-57 licensed driller under supervision of a Stantec geologist. The first five feet of each soil boring location will be advanced using a hand auger to confirm the absence of shallow subsurface utilities or other obstructions. The soil borings will be advanced to total depth using direct-push drilling equipment equipped with a four-foot sample barrel and clear plastic liners. Each soil boring will be cored continuously from approximately 5 feet bgs to the total depth of investigation. Recovered soil cores will be logged in accordance with the Unified Soil Classification System (USCS), and screened at approximate 3-foot intervals for the presence of volatile organic vapors using a photoionization detector (PID). Soil classifications and PID readings will be recorded on soil boring logs.

Three soil samples will be collected from each soil boring at representative depths between 5 feet bgs and first-encountered groundwater, anticipated at approximately 12 feet bgs. If encountered, soils exhibiting field evidence of chemical impact (visual or olfactory evidence, or elevated PID readings) will be sampled. Otherwise, samples will be collected from evenly spaced, representative intervals. Soil samples will be collected by cutting the core barrel liner at the desired interval and capping each end with plastic end caps.

Work Plan for Additional Soil and Groundwater Investigation

Mr. Paresh Khatri February 5, 2009 Page 6 of 9

Grab Groundwater Sampling Procedures

Stantec will attempt to collect grab groundwater samples from each of the eight proposed soil borings. Upon encountering groundwater in each borehole, a temporary polyvinyl chloride (PVC) well screen will be placed in the borehole. Groundwater samples will be collected in laboratory-supplied containers using a disposable bailer.

Soil and Groundwater Grab Sample Analysis Plan

All samples will be labeled and stored on ice pending delivery to a California-certified laboratory under chain-of-custody documentation. All samples will be analyzed for the following constituents:

Total petroleum hydrocarbons as diesel (TPHd) by U.S. Environmental Protection Agency (USEPA) Method 8015M with silica gel treatment;
TPH as gasoline (TPHg) by(USEPA Method 8015M; and
Benzene, toluene, ethylbenzene, and total xylenes (BTEX) and MTBE by USEPA Method 8260B.

Soil Boring Abandonment

Upon completion of soil and groundwater grab sampling, borings will be backfilled with bentonite grout in accordance with ACPWA requirements.

Soil and Water Disposal

Soil cuttings and purge/rinseate water generated during soil boring activities will temporarily be stored in California DOT-approved 55-gallon steel drums on-site pending characterization and disposal.

Task 3 - Groundwater Sampling and Semi-Annual Monitoring

Stantec proposes conducting a groundwater monitoring and gauging event concurrent with subsurface investigation activities. As discussed under Task 2 above, groundwater chemical data from well samples will be compared with grab groundwater chemical data to assess presence of free-phase product, and to determine if product can be adequately observed in Site wells. Going forward, wells will be gauged and monitored on a semi-annual basis. Following collection of groundwater samples, Stantec will make a recommendation regarding the frequency of groundwater sampling at the Site.

Groundwater Monitoring and Sampling

Groundwater samples will be collected from wells MW-1, MW-2, MW-4, MW-7, MW-8, OW-1, and OW-2. Prior to sampling, the depth-to-groundwater will be gauged using an electronic water-level meter, and the presence of free-phase product will be evaluated using an oil/water interface probe. Each well will be purged of approximately three well casing volumes of water using a diaphragm pump fitted with disposable tubing for each well. During purging, the evacuated water will be periodically measured for pH, electrical conductivity, and temperature,

Work Plan for Additional Soil and Groundwater Investigation

Mr. Paresh Khatri February 5, 2009 Page 7 of 9

and visually inspected for color, presence of free product, and turbidity. Downhole DO and oxidation reduction potential (ORP) measurements will be obtained before and after purging each well. Ferrous iron will be measured in each groundwater sample at the time of sampling using a HACH field test kit. Physical parameters, visual observations, and sampling notes will be recorded on field data sheets.

Upon removal of the appropriate purge volume and stabilization of the measured field parameters, samples will be collected from each well using a disposable polyvinyl chloride bailer. Groundwater samples will be transferred into laboratory-supplied glassware and stored on ice pending delivery to a California-certified laboratory under chain-of-custody documentation. Groundwater samples will be analyzed for the following constituents:

☐ Total petroleum hydrocarbons as diesel (TPHd) by U.S. Environmental Protection Agency (USEPA) Method 8015M with silica gel treatment;
☐ TPH as gasoline (TPHg) by(USEPA Method 8015M; and
■ Benzene, toluene, ethylbenzene, and total xylenes (BTEX) and MTBE by USEPA Method 8260B.
In addition, samples collected from wells OW-1 and OW-2 will be analyzed for:
☐ Nitrate and sulfate using USEPA Method 9056.

Semi-Annual Groundwater Gauging and Monitoring

A total of ten wells (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, OW-1, and OW-2) will be gauged semi-annually for depth-to-groundwater and the presence of free-phase product. Data collected from this event will be used to indicate the presence of separate phase petroleum hydrocarbons, if any, and to determine current groundwater flow direction at the Site.

Water Disposal

Purge/rinseate water generated groundwater monitoring activities will temporarily be stored in California DOT-approved 55-gallon steel drums on-site pending disposal.

Task 4 - Reporting

Following the completion of the soil boring activities and groundwater sampling activities, Stantec will submit a report documenting and evaluating the findings. The report will include physical data collected during the investigation including soil boring logs, soil and groundwater analytical results, and an evaluation of the efficacy of previous remediation using Fenton's reagent, and recommendations regarding the ability for Site wells to effectively monitor the presence of free-phase product.

SCHEDULE

Stantec anticipates completing the proposed scope of work in 6 to 8 weeks following approval of this Work Plan by the ACEHS. This schedule is subject to subcontractor availability.

Fuel Leak Case No. RO0000354 and Geotracker Global ID T0600101062, Hertz Subject:

Penske, 725 Julie Ann Way, Oakland, CA 94621

Dear Mr. Saut:

Alameda County Environmental Health (ACEH) staff has reviewed the case file for the abovereferenced site including the recently submitted document entitled, "Request for Conditional Site Closure," dated March 2, 2004, which was prepared by Secor International Incorporated for the subject site. The report details site assessment activities conducted, which includes Fenton's Reagent injection conducted in October 2000. Subsequently, Secor requests conditional case closure to limit the site to commercial industrial use with a deed restriction, based on groundwater sample analytical data that indicates that "free product" is no longer present at the site following Fenton's Reagent injection.

However, ACEH cannot concur with the proposed conditional case closure since sheen was detected in MW-1 on December 5, 2002, post remedial confirmation soil samples were not collected, the monitoring wells may not be appropriately constructed based on site conditions, and preferential pathways have not been evaluated due to shallow groundwater conditions at the site. ACEH requests that you address the above-mentioned concerns (detailed below), and send us the work plan and technical reports by the due dates specified below. Please note that this decision to deny closure at this time is subject to appeal to the State Water Resources Control Board (SWRCB), pursuant to Section 25299.39.2(b) of the Health and Safety Code (Thompson-Richter Underground Storage Tank Reform Act - Senate Bill 562). Please contact the SWRCB Underground Storage Tank Program at (916) 341-5851 for information regarding the appeal process.

TECHNICAL COMMENTS

1. Contaminant Source Area Characterization - Compliance soil samples were collected following the underground storage tank (UST) removals in October 1989. concentrations, up to 13,000 milligrams per kilogram (mg/kg) of total petroleum hydrocarbons (TPH) as diesel (d), 2,100 mg/kg TPH as gasoline (g), and 36 mg/kg benzene were detected in the soil. Fenton's Reagent was injected into the subsurface in October 2000 to remediate the site. Although a decrease in contaminant concentrations in groundwater have been observed generally at the site, elevated concentrations of TPH-d continue to be detected in groundwater monitoring wells MW-1, MW-4, and MW-7, with product sheen observed on the groundwater surface in monitoring well MW-1. Although Secor suggests the product sheen may be ferrous iron oxidation sheen, groundwater sample analytical results detected up to 17,000 µg/L TPH-d in a groundwater sample collected from in MW-1, indicating dissolved-phase and perhaps free-phase diesel remains in groundwater at the site. In addition, confirmation soil samples have not been collected to verify remedial success in soil. Since significantly elevated concentrations of benzene (up to 36 mg/kg) were detected in soil, the contaminant volatilization to outdoor air and indoor air exposure pathways also warrants further evaluation. Please propose a scope of work to address the above-mentioned concerns and submit a work plan.

- 2. Monitoring Wells and Hydrogeologic Setting Monitoring wells MW-1, MW-3, MW-4, and MW-5 are installed to a depth of 36.5 feet below the ground surface (bgs) screened intervals from 10 feet to 35 feet bgs and MW-2, MW-6, MW-7, and MW-8 are installed to a depth of approximately 30 feet bgs with screened intervals from 10 feet to 30 feet bgs. Depth to groundwater at the site has been measured as shallow as 5 feet bgs. Since groundwater elevation is above the screened interval for site monitoring wells and petroleum hydrocarbons have a specific gravity that is lower than water (therefore, float on water); concentrations of contaminants detected may not be representative of actual site conditions. Therefore, the monitoring wells appear to be incorrectly constructed, which may affect the contaminant concentrations detected in groundwater. Please evaluate and discuss the effect that groundwater elevations rising above monitoring well screens have on hydrocarbon concentrations for each monitoring well at the site. Please address the above-mentioned concerns and include your analysis and proposal to address this data gap in the work plan requested below.
- 3. Preferential Pathway Study The purpose of the preferential pathway study is to locate potential migration pathways and conduits and determine the probability of the NAPL and/or plume encountering preferential pathways and conduits that could spread contamination. We request that you perform a preferential pathway study that details the potential migration pathways and potential conduits (wells, utilities, pipelines, etc.) for vertical and lateral migration that may be present in the vicinity of the site.

Discuss your analysis and interpretation of the results of the preferential pathway study and report your results in the soil and groundwater investigation work plan requested below. The results of your study shall contain all information required by California Code of Regulations, Title 23, Division 3, Chapter 16, §2654(b).

a. Utility Survey

An evaluation of all utility lines and trenches (including sewers, storm drains, pipelines, trench backfill, etc.) within and near the site and plume area(s) is required as part of your study. Please include maps and cross-sections illustrating the location and depth of all utility lines and trenches within and near the site and plume areas(s) as part of your study.

b. Well Survey

The preferential pathway study shall include a detailed well survey of all wells (monitoring and production wells: active, inactive, standby, decommissioned (sealed with concrete),

abandoned (improperly decommissioned or lost); and dewatering, drainage, and cathodic protection wells) within a ¼ mile radius of the subject site. As part of your detailed well survey, please perform a background study of the historical land uses of the site and properties in the vicinity of the site. Use the results of your background study to determine the existence of unrecorded/unknown (abandoned) wells, which can act as contaminant migration pathways at or from your site. Please review and submit copies of historical maps, such as Sanborn maps, aerial photographs, etc., when conducting the background study.

- 4. Groundwater Contaminant Plume Monitoring Several years of quarterly groundwater monitoring data exists for the site. Your consultant may propose a reduction in groundwater sampling frequency for monitoring wells at the site. Should you wish to reduce the groundwater sampling frequency, please submit a groundwater sampling schedule that adequately justifies a sampling frequency reduction for review. Please note that all monitoring points must be gauged semi-annually.
- 5. GeoTracker Compliance A review of the case file and the State Water Resources Control Board's (SWRCB) GeoTracker website indicate that electronic copies of analytical data have not been submitted, rendering the site to non-compliance status. Pursuant to California Code of Regulations, Title 23, Division 3, Chapter 16, Article 12, Sections 2729 and 2729.1, beginning September 1, 2001, all analytical data, including monitoring well samples, submitted in a report to a regulatory agency as part of the UST or LUST program, must be transmitted electronically to the SWRCB GeoTracker system via the internet. Additionally, beginning January 1, 2002, all permanent monitoring points utilized to collect groundwater samples (i.e. monitoring wells) and submitted in a report to a regulatory agency, must be surveyed (top of casing) to mean sea level and latitude and longitude to sub-meter accuracy using NAD 83. A California licensed surveyor may be required to perform this work. Additionally, pursuant to California Code of Regulations, Title 23, Division 3, Chapter 30, Articles 1 and 2, Sections 3893, 3894, and 3895, beginning July 1, 2005, the successful submittal of electronic information (i.e. report in PDF format) shall replace the requirement for the submittal of a paper copy. Please complete the surveying and upload all applicable electronic submittal types such as the analytical data (EDF), survey data (GEO XY and GEO Z), and PDF reports from July 1, 2005 to current to GeoTracker. Electronic reporting is described below.

REQUEST FOR INFORMATION

ACEH's case file for the subject site contains the following reports listed on our website (http://www.acgov.org/aceh/lop/ust.htm). You are requested to submit copies of all other reports related to environmental investigations for this property (including Phase I and Phase II reports) by May 7, 2008.

TECHNICAL REPORT REQUEST

Please submit work plans and technical reports to Alameda County Environmental Health (Attention: Paresh Khatri), according to the following schedule:

May 7, 2008 – Complete uploads to SWRCB's GeoTracker website

- June 6, 2008 Soil and Water Investigation Work Plan (to include results of the Preferential Pathway Evaluation.)
- July 30, 2008 Quarterly Monitoring Report (2nd Quarter 2008)
- October 30, 2008 Quarterly Monitoring Report (3rd Quarter 2008)
- January 30, 2009 Quarterly Monitoring Report (4th Quarter 2008)
- April 30, 2009 Quarterly Monitoring Report (1st Quarter 2009)

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program ftp site are provided on the attached "Electronic Report Upload (ftp) Instructions." Please do not submit reports as attachments to electronic mail.

Submission of reports to the Alameda County ftp site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) Geotracker website. Submission of reports to the Geotracker website does not fulfill the requirement to submit documents to the Alameda County ftp site. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitor wells, and other data to the Geotracker database over the Internet. Beginning July 1, 2005, electronic submittal of a complete copy of all necessary reports was required in Geotracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.swrcb.ca.gov/ust/cleanup/electronic reporting).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

Mr. Saut RO0000354 April 8, 2008, Page 5

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

If you have any questions, please call me at (510) 777-2478 or send me an electronic mail message at paresh.khatri@acgov.org.

Sincerely,

Paresh Khatri

Geophysical Investigation

Former Penske Trucking Facility

725 Julie Ann Way Oakland, California

NORCAL Project No. 08-903.05

Dear Mr. Doran:

This report presents the findings of a geophysical investigation performed by NORCAL Geophysical Consultants, Inc. on portions of the subject property The field investigation was conducted by NORCAL Professional Geophysicist David Bissiri and Field Technician Travis Black on November 20, 2008. Background information and site logistics were provided by Ms. Khamly Chuop of Stantec Consultants.

I SITE DESCRIPTION and PURPOSE

The site is an active concrete redi-mix truck repair shop and garage facility located near the intersection of Julie Ann Way and Coliseum Way in Oakland, California (see Vicinity Map, Plate 1). A two-story building comprising two service bays / shop and the main facility office is located in the southeastern portion of the site and a single story building comprising additional offices and a car-port is located opposite the main office, in the southwestern portion of the site. Between the two buildings is a large asphalt-paved parking lot. Additional parking lots are located to the west and north of the main office/shop. The survey area, as designated by Stantec Consulting, consisted of an approximately 200- by 150-foot portion of the parking lot between the buildings, as shown on Plate 1.

According to information supplied to NORCAL, the site was formerly used as a maintenance and fueling facility. Two underground storage tanks (USTs) associated with the former facility were located in the parking lot between the buildings but reportedly have been removed and the former tank pits backfilled. An approximately 80- by 30-foot asphalt patch located near the center of the parking lot is taken as evidence of one of the backfilled pits. A possible third UST as depicted by a smaller 20- by 10-foot irregularly shaped area is located adjacent to the west wall of the main office/shop. It is uncertain whether all the piping and other utilities associated with the former USTs

were removed. Results of water/soil samples obtained from some existing monitoring wells suggest that undocumented underground utilities may be acting as preferential pathways for groundwater flow. The primary purpose of the investigation, therefore, was to determine if there is geophysical evidence of possible former piping or additional underground utilities within the designated survey area. A secondary purpose was to possibly delineate the backfilled tank-pits.

II METHODOLOGY

We performed the geophysical investigation using a combination of terrain conductivity (TC), ground penetrating radar (GPR), and hand-held metal detection (MD) methods. The TC was used to delineate lateral variations of electrical conductivity within the shallow subsurface that may be caused by backfilled zones, utility trenches, and large metal objects. GPR was used to image the shallow subsurface for evidence of backfilled areas and utility alignments. MD was used to delineate the locations and general outline of subsurface metallic objects. A more detailed discussion of these methods, data analysis, geophysical instrumentation, and limitations is presented in Appendix A.

III DATA ACQUISITION and PROCESSING

TC Survey

Our first task was to establish a survey grid to guide the data collection. The grid was based on a rectangular coordinate system and consisted of a series of lines spaced approximately 5- feet apart oriented perpendicular to the main office /shop building. TC data were then collected by walking along the lines with the TC instrument and taking data readings at approximately 5-foot intervals. The TC data were then uploaded to a field computer and processed to produce a TC contour map. This map was evaluated for contour line patterns suggestive of utility alignments, backfilled zones, or lateral changes in the subsurface material.

GPR Survey

For logistical reasons, the survey area was sub-divided into eight sub-areas, each approximately 50-feet wide and 90-feet long. The GPR survey was then conducted by pushing a cart-mounted radar instrument along a series of lines parallel to those used for the TC survey but in this case spaced 1-foot apart. GPR data were then obtained at intervals of approximately 0.06 foot along each line and processed to produce a series of preliminary three-dimensional (3-D) "time-slice" maps of each sub-area. These maps depicted lateral variations of GPR reflections at various depths and were evaluated for patterns suggestive of backfilled areas and utility alignments. The eight separate data sets were later merged into a larger single data set and processed again for further analysis.

MD Survey

The MD survey consisted of hand-carrying the MD instrument along of a series of bidirectional traverses spaced approximately 3- 5 feet apart in the accessible portions of the survey area. If a subsurface metal object was detected, we temporarily stopped the reconnaissance and concentrated our efforts in the vicinity of that object. As the outline and orientation of the detected object became more apparent, additional traverses of differing orientations and lengths were conducted. The resulting interpreted outline or orientation of the feature was then marked on the ground and its location mapped for comparison with the results of the TC and GPR surveys.

IV RESULTS and CONCLUSIONS

The results of the geophysical surveys are presented as a Site Map on Plate 1. This map depicts the approximate limits of the survey area, the locations of pertinent above-ground objects, and the locations of interpreted subsurface features. Plate 2 is a TC contour map. This map depicts lateral variations of electrical conductivity, the limits of the TC survey area, and the locations of pertinent above-ground objects and interpreted sub-surface features. Plates 3 and 4 are two representative examples of the GPR data images that aided in our interpretation. Plate 3 displays data from a depth of approximately 1.5 feet below grade and Plate 4 displays data from a depth of approximately 2.7 feet below grade. Other GPR images from depths ranging from 0.5 foot below grade to approximately 6-feet below grade were analyzed as well but are not presented.

<u>Underground Utilities</u>

Our analysis of the MD instrument response and TC data resolved seven linear subsurface features that are suspected utility lines. The type of utility represented by each was not determined. However, we were able to determine that five of them were metallic. The interpreted locations and extent of the lines are depicted on Plate 1 as the dashed lines labeled "-uu--" (for undifferentiated metallic utility) and "-u-" (for undifferentiated non-metallic utility). Most of the lines appear to be of relatively short extent, suggesting that they may be abandoned. Two of the longer lines, however, may still be active. One of the suspected active lines extends westward from the northwest corner of the main office/shop building towards the carport canopy while the other extends northward from the building corner, just along the eastern survey boundary.

Former Tank Pits

Based on our analysis of the GPR data, we believe there are two anomalous GPR features that could be backfilled former tank pits and are depicted on the plates as the dashed red figures. One anomaly is an approximately 50- by 50-foot square feature located in the central portion of the survey area and

is most apparent on Plate 3, which is a GPR image from approximately 1.5 feet below grade. While this anomaly is in the general vicinity of the larger of the reported former tank-pits, it is not as elongated as reported, or this GPR anomaly may represent an additional subsurface feature that may have been associated with the former facility. In addition, several of the previously mentioned suspected utility lines extend to, or into, this anomaly. This suggests that the GPR anomaly and the suspected utility lines may be related. The other GPR anomaly is a smaller 30-by 20-foot rectangular feature located in the northern portion of the survey area, immediately north of the utility line extending from the main office/shop towards the carport canopy. This feature is most apparent on Plate 4, which depicts data from a depth of approximately 2.7 feet and is suggestive of a man-made feature. It should be noted that additional linear shading suggestive of rectangular boundaries exist on both GPR images, but these are believed to result from the merging of the individual data sets since these boundaries occur where adjacent sub-areas join. We could not discern any GPR variations suggestive of the alleged tank pit adjacent to the main office/shop building.

In addition to the two GPR anomalies noted above, we also delineated two curvilinear features on Plates 3 and 4 that enclose somewhat broad areas within the survey area. These broad areas extend generally north- to-south through the central and western portion of the survey area and are depicted by the stippled pattern on Plate 1. Based on the broad areas over which these extend, we believe that these features may represent two types of sub-surface conditions or material which we designate "Soil Type I" and "Soil Type II". This difference may be due to variations in moisture content, soil composition, or compaction. It could not be determined if this difference is related to past or current uses of the site, though the arcuate shape of the Type II zone in the central portion is suggestive of a possible driveway.

Finally, we also detected a single localized metal detector anomaly in the western portion of the survey area adjacent to the carport canopy, as depicted on Plate 1 as the shaded blue feature. This anomaly appears to be due to a shallowly buried metal object approximately 5-foot square. The MD instrument response suggested that this anomaly may be due to a possible flat-lying object such as a vault lid or reinforced concrete footing.

V STANDARD CARE AND WARRANTY

The scope of NORCAL's services for this project consisted of using geophysical methods to characterize the shallow subsurface. The accuracy of our findings is subject to specific site conditions and limitations inherent to the techniques used. We performed our services in a manner consistent with the level of skill ordinarily exercised by members of the profession currently employing similar methods. No warranty, with respect to the performance of services or products delivered under this agreement, expressed or implied, is made by NORCAL.

We appreciate having the opportunity to provide you with this information.

Respectfully,

NORCAL Geophysical Consultants, Inc.

David Bissiri

Geophysicist, GP-1009

DJB/KGB/tt

Appendix A - Geophysical Methodology, Instrumentation, Data Analysis, and

Limitations

Appendix A

Geophysical Methodology, Instrumentation, Data Analysis, and Limitations

Terrain Conductivity (TC)

Methodology

The TC method provides information on the lateral variation of the electrical conductivity of the subsurface. These changes in conductivity can arise from natural changes in soil composition or from buried foreign objects. Operating on the principle of electromagnetic induction, the method utilizes an instrument having two coils separated by a fixed distance. One of these coils transmits a primary signal that induces a current flow (secondary signal) in the earth. The other coil senses this secondary signal. For measurement purposes the secondary signal is broken down into both quadrature and in-phase components. The quadrature component is used to determine the value of electrical conductivity and is measured in milliSiemens/meter (mS/m). This component is useful for detecting both metallic and non-metallic objects. The in-phase component also changes with conductivity, but varies in a different way than the quadrature component. This component is useful when only the location of metallic objects is of interest. In-phase measurements are expressed in parts-per-thousand (PPT).

When highly resistive material is encountered, as is the case for most earth material, there is a linear relationship between the quadrature component and conductivity. When highly conductive materials like metals are encountered, both quadrature and in-phase components can be quite large and their behavior is often non-linear. While this non-linear effect can make the measurement of both components useful in looking for buried metal, it is typically the quadrature component that is analyzed. This is because the quadrature component is affected by both metallic and non-metallic materials, whereas the in-phase component is affected primarily only by metals.

Instrumentation

The instrument typically used by NORCAL for shallow subsurface investigations is a Geonics, Ltd. EM31-DL terrain conductivity meter. This instrument consists of transmitting and receiving coils mounted at opposites ends of a horizontal boom with a control console in between. The separation distance of the coils is approximately 12 feet. This translates into an effective sampling depth of approximately 20 feet since approximately 75% of the cumulative response of the instrument comes from this portion of the subsurface (for a homogeneous half-space). The device is carried by the operator at hip-level and TC readings are taken by pressing a trigger button. The EM31 is connected to an Omnidata data recorder that automatically stores the TC values as well as station locations and any field notes. The data logger stores the data in a way that it can be up-loaded to a computer for processing.

Computer Processing

TC data are typically processed in the field on a portable computer. The uploaded data are converted into a format suitable for contouring using the program SURFER from Golden Software. This program calculates an evenly spaced array of values (data grid) based on the measured field data. These gridded values are then contoured to produce TC contour maps for interpretation.

Contour Map Interpretation

Generally speaking, in a region with fairly uniform conductivity conditions the TC values will vary smoothly from one area to another. Under these conditions, contour lines are usually spaced far apart. In contrast, in those areas where lateral TC variations are stronger, the contours are more closely spaced. In some cases the variations are so strong that the contours become highly contorted. These contorted contours may form roughly concentric circles suggestive of bull's-eyes, tightly wound loops and whorls similar to finger prints, or elongated parallel lines. Actual magnitude and shape of the contour lines is dependent on the how rapidly the conductivity of the subsurface changes and if there are any metallic objects present that can affect the instrument readings.

Roughly concentric circles are generally referred to as monopoles. Monopoles that are roughly limited in extent to the data point spacing of the sampling grid are often caused by relatively small, near surface metallic objects with limited cross-section. These typically consist of well caps, pull boxes, balls of wire, etc. On the other hand, larger monopoles that extend across an area of several data points are typically associated with larger, deeper objects such USTs, concrete pads, backfilled zones, etc.

Irregular patterns of loops and whorls are often indicative of several conductive objects with variable shape, size, conductivity, and distribution being present. These irregular TC patterns are the most difficult to interpret. Past experience has shown that such patterns are usually associated with debris fields, landfills, and demolition sites.

A series of generally parallel contour lines typically indicates the source is an elongate object such as a building wall, fence, or underground pipeline. If the parallel contours are more or less straight, then this indicates the object was oriented roughly parallel to the direction of the EM31's coil boom during data collection. If the contour lines form a series of parallel, undulating contours (also referred to as a "herring bone" pattern), then this indicates the source was oriented roughly perpendicular to the EM31's boom during data collection.

Regardless of whether the contours form discrete monopoles, irregular patterns, or parallel lines, if there are no obvious nearby above ground sources that could cause such variations, then subsurface objects are suspected. TC contours are typically considered anomalous when differences larger than a few tens of milliSiemens per meter (mS/m) are displayed from one data station to the next.

Limitations

Buried ferrous metal objects often produce large localized variations, or anomalies, in terrain conductivity. As a general rule, anomaly magnitude typically decreases, and anomaly width increases, as distance (depth) to the source increases. This can make detection of small, deeply buried metallic objects difficult. In addition, the ability to detect a buried metal object is based on the intensity of these variations in contrast to the intensity of background variations. The intensity of background variations is based on the conductivity of the soil and the amount of above and below ground metal present within a survey area. Cultural features such as chain link fences, buildings, debris, railroad spurs, utilities, above ground electric lines, etc. typically produce

variations with high intensities. These variations may mask the TC effects of buried metal objects and thus make it very difficult to determine whether the variations are associated with below ground metal or known above/below ground cultural features.

Apart from the physical limitations of the instrument and the unwanted effects from secondary objects, the ability to detect subsurface features is also dependent upon the density of data acquisition points. If the distance between data acquisition points is significantly larger than the size of the target object, then the object may not be detected.

Electromagnetic Line Location (EMLL)

EMLL Methodology

This method uses radio signals that are emitted by conductive utility lines to trace out their alignments. Under certain conditions, metallic utility conduits and pipelines can act as radio antennas. Energized utilities like electric, telephone, and grounded water lines often carry their own electrical currents. Radio signals are then radiated from the lines as a result of these currents. These types of signals are referred to as "passive signals" since only a receiver tuned to the appropriate frequency is required to trace them. Other utilities like natural gas lines, drain lines, cathodic protection lines, etc. are not normally energized and thus require a radio signal placed on them in order to be traced. These types of signals are referred to as "active signals" and are placed on the lines by a radio transmitter, either by induction or by directly connecting a lead to them.

Whether the radio signal is passive or active, the surface trace of a line is determined the same way. A specialized radio receiver is carried along a series of traverses and the strength of the emitted signal noted. In most cases, the line is located below the point where the signal is strongest. After a series of traverses have been completed and the position of strongest signal strength has been determined, the alignment of the utility becomes apparent.

EMLL Instrument

The EMLL instrument used for this investigation was a Radio Detection RD 4000. This instrument consists of a specialized radio receiver and a separate transmitter. The receiver is a multi-frequency, multiple antenna device that is capable of determining the relative strength and direction of signals broadcast from buried pipes and cables. The receiver generates both a meter reading (unitless) and an audible response when near an energized line. It does not provide any recordable output. The receiver is usually capable of tracing a line buried to a depth of about ten feet. The transmitter is a multi-frequency device with variable power output. In most cases, the highest power setting is sufficient to trace out a line for several hundred feet.

EMLL Limitations

The EMLL works by detecting radio signals. In many cases, the sources of these signals are from isolated known subsurface utility lines. In some cases however, other signals may be present. These other signals may be emitted by overhead electric and telephone lines, grounded water lines, and commercial radio towers. These other signals may distort or

completely mask the primary signal of interest. In other cases, the primary signal may actually "jump" from one underground conductor to another, leading to erroneous results. Finally, traceable currents can only be detected as long as there is electrical continuity. Metal conduits having insulating joints and non-metallic utilities cannot be traced with EMLL.

Metal Detection (MD)

MD Methodology

This method uses the principle of electromagnetic induction to detect shallowly buried metal objects such as USTs, metal utility conduits, rebar in concrete, manhole covers, and various metallic debris. This is done by carrying a hand-held radio transmitter-receiver unit above the ground and continuously scanning the surface. A primary coil broadcasts a radio signal from a transmitter which induces secondary electrical currents in metal objects. These secondary currents in turn produce a magnetic field which is detected by the receiver.

Instrumentation

The MD instrument that we typically use for shallow subsurface investigations is a Fisher TW-6 pipe and cable locator. This instrument is expressly designed to detect metallic pipes, cables, USTs, manhole covers, and other large, shallowly buried metallic objects. The instrument operates by generating both a meter reading (unitless) and an audible response when near a metal object. The peak instrument response usually occurs when the unit is directly over the object. The TW-6 does not provide a recordable data output that can be used for later computer processing. Results are generally limited to marking the interpreted outlines of detected objects in the field and mapping their locations.

Limitations

In general, the response of the MD instrument is roughly proportional to the horizontal surface area of near surface buried objects (typically in the upper three or four feet). This relationship can be used to advantage in discriminating between metal debris, reinforced concrete pads, and pipelines. However, in the presence of above ground metal objects such as fences, walls, parked cars, and metal debris, this is no longer valid. In some instances, the presence of such objects can make it very difficult to determine whether the instrument responses are associated with below ground targets or above ground cultural features. When multiple sources are present it may not be possible to identify individual targets. Also, relatively large objects that have a limited horizontal cross-section such as well casing and fence posts are sometimes difficult to detect.

Ground Penetrating Radar (GPR)

Ground Penetrating Radar (GPR)

GPR Methodology

Ground penetrating radar is a method that provides a continuous, high resolution graphical cross-section of the shallow subsurface. The method entails repeatedly radiating an electromagnetic pulse into the ground from an antenna as it is moved along a traverse. Reflected signals are received by an antenna (often the same one used to generate the signal) and sent to a control unit for processing. The control unit then converts the varying amplitude of reflected radar signals as a function of time into a cross-sectional image showing signal amplitude as a function of depth.

GPR is particularly sensitive to variations of two electrical properties. One property is conductivity (the ability of a material to conduct a charge when a field is applied) and the other is permittivity (the ability of a material to hold a charge when a field is applied). These two properties determine how far a signal can propagate. They also determine the strength of reflected signals that can be generated at material boundaries. Most soil and earthen-like materials such as concrete are electrically resistive and have a relatively low permittivity. As a result, they are relatively transparent to electromagnetic energy. This means that only a portion of the radar signal incident upon them is reflected back to the surface. On the other hand, when the signal encounters an object composed of a material that has the opposite electrical properties, especially one with a high permittivity (such as metal) much of the incident energy is reflected.

Instrumentation

We typically perform GPR surveys using a Geophysical Survey Systems, Inc. SIR-3000 Subsurface Interface Radar System equipped with either a 400 or 500 megahertz (MHz) transducer. This unit is comprised of a combined control/data recording console that is connected by a telemetry cable to the antenna. This system is often chosen for investigating environmental sites since it usually provides both the resolution and depth penetration needed for characterizing the upper three to four feet of the subsurface.

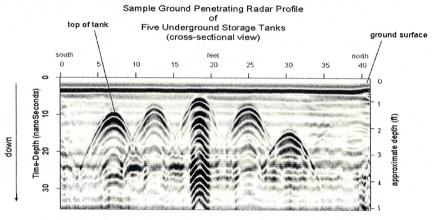

Data Interpretation

The interpretation of GPR data can be done in two ways. The first is referred to as two-dimensional (2-D) and involves examining the graphical records for reflections from buried objects. 2-D GPR records represent a vertical "slice" of the subsurface along a single traverse (or profile) which displays changes in reflected signal strength with horizontal position as a function of arrival time. Reflections that arrive earlier in time are placed in the upper portions of the record and reflections that arrive later are placed lower, towards the bottom of the records. Horizontal position is across the top of the record. For presentation purposes almost any color range can be chosen to depict reflected signal strength, but typically it is some variation of black-and-white.

In areas with relatively uniform conditions, with no buried objects producing reflections, the records typically appear as a series of alternating dark and light horizontal bands. In areas where there are subsurface objects producing reflections, the horizontal banding is disrupted. Discrete objects typically produce reflections having the appearance of inverted "U"s, forming what are known as "hyperbolic reflections". Metallic objects often produce markedly strong reflections, in many cases forming multiple reflections appearing as a series of inverted U's cascading down the record. Non-metallic objects can produce similar reflections, but the multiples are typically much weaker.

A sample profile from a different site with five adjacent steel USTs is presented below:

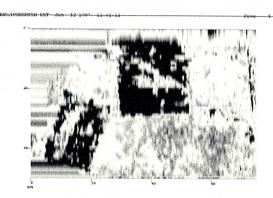

Note: the "Time Depth" of 35 nanoSeconds at the bottom of this profile corresponds to a true depth of approximately 5 feet for this example only. Actual depth to bottom of other profiles may be different.

An object's burial depth may also be estimated from GPR profiles. As mentioned above, GPR measures signal amplitude as a function of time. However, the translation of the radar signal's travel time (technically known as "time-depth") to an actual distance (true depth) is not always a simple one. Strictly speaking, in order to translate from time-depth to true depth the signal velocity within each time interval must be known. Since this is not routinely determined in the field, estimated velocities are often used for determining the approximate depth to a reflector. The empirical values for GPR signal propagation velocities within commonly encountered soils are obtained from published tables.

The second way GPR data can be displayed is referred to as a three-dimensional (3-D) timeslice. In this case, the data is displayed as a horizontal "slice" of a plan area at a specified depth below grade. The data is obtained from multiple parallel traverses of 2-D profiles and processed to display variations in signal amplitude in both horizontal and vertical directions. A sample time-slice from a site different than the one investigated in this investigation is presented below.

Time-Slice image of two former pump islands buried under approximately 2-foot of asphalt and base material. Diagonal linear feature extending from top center to lower right is an electrical conduit located below asphalt but above former pump islands.

Limitations

The ability to detect subsurface targets is dependent on specific site conditions. These conditions include depth of burial, the size or diameter of the target, the condition of the specific target in question, the type of backfill material associated with the target, and the surface conditions over the target. Typically, the depth of detection will be reduced as the clay and/or moisture content in the subsurface increases. As a result, depths of detection (using a 500 Mhz antenna) typically range from as deep as six feet to as little as a few inches.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/07/2008 has revealed that there is 1 CERCLIS site within approximately 0.75 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
STANDARD IRON & METALS COMPANY	801 - 69TH AVENUE	ESE 1/2 - 1 (0.681 mi.)	AQ205	360

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there are 7 CERC-NFRAP sites within approximately 0.75 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/11/2008 has revealed that there are 3 CORRACTS sites within approximately 1.25 miles of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/10/2008 has revealed that there is 1 RCRA-TSDF site within approximately 0.75 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2008 has revealed that there are 2 RCRA-LQG sites within approximately 0.5 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2008 has revealed that there are 20 RCRA-SQG sites within approximately 0.5 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/10/2008 has revealed that there is 1 RCRA-CESQG site within approximately 0.5 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/25/2008 has revealed that there are 24 ENVIROSTOR sites within approximately 1.25 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 09/08/2008 has revealed that there is 1

SWF/LF site within approximately 0.75 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 11/04/2008 has revealed that there are 3 UST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 09/10/2008 has revealed that there

are 3 RCRA-NonGen sites within approximately 0.5 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there is 1 HIST FTTS site within approximately 0.25 miles of the target property.

HUNTINGTON LABORATORIES INC	700 KEVIN CT	SSE 1/8 - 1/4 (0.135 mi.)	D43	66

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 07/31/2008 has revealed that there are 3 ICIS sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal

Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/30/2008 has revealed that there are 14 FINDS sites within approximately 0.25 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2006 has revealed that there are 37 HAZNET sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 2

EDR Historical Auto Stations sites within approximately 0.5 miles of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

> cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

CA WDS:

Facility ID: San Francisco Bay 01I009108

Facility Type: Industrial - Facility that treats and/or disposes of liquid or

semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water

pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is

under Waste Discharge Requirements.

NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7

are assigned by the Regional Board

Subregion: 2

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

> cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008 Waste name: LEAD

Relative: CA BOND EXP. PLAN:

Higher Reponsible Party: DETAILED SITE EXPENDITURE PLAN

Project Revenue Source Company: Not reported

Actual: Project Revenue Source Addr: Not reported

11 ft. Project Revenue Source City, St, Zip: Not reported

Project Revenue Source Desc: The identified responsible parties include the former L&M Plating owner and the

owner of 930 and 920 54th Avenue. Failure by the shop owners to comply with the DHS order has necessitated expenditure of Bond funds. The Department will take

appropriate cost recovery actions.

Site Description: L&M plated metals with zinc, chrome and nickel finish from 1977 until 1983 when

an extensive fire occurred. Soil at the site and at 930 54th Avenue is

contaminated with cyanide and heavy metals.

Hazardous Waste Desc: High concentrations of cyanide, zinc, chromium, cadmium, nickel, lead, and

antimony have been detected on ground surfaces and in the soil onsite and

offsite.

Threat To Public Health & Env: The site has been fenced and posted and former site residents have been

evicted. Onsite soils show hazardous levels of cyanide and heavy metals. Unless

the site is remediated, adjacent property owners may be affected by the

contaminated soils.

Site Activity Status: Interim remedial measures (IRMs) including fencing, posting, berming, sealing

drums and profiling waste containers have been completed. The removal of drums and tanks of hazardous materials was conducted in August, 1987. A feasibility study for the contaminated soils has been completed. The ground water investigation and ground water feasibility study (FS) was initiated in

September, 1988. Following completion of the FS, DHS will prepare a draft RAP

for final remediation of the site.

Off-site waste receiver: Commercial status unknown

No

Hazardous Waste Summary:

Used oil transporter:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

Direction Distance Elevation

tion Site Database(s) EPA ID Number

A A A EQUIPMENT (Continued)

1006805315

EDR ID Number

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:

Facility ID: San Francisco Bay 01I013249

Facility Type: Industrial - Facility that treats and/or disposes of liquid or

semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water

pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is

under Waste Discharge Requirements.

NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7

are assigned by the Regional Board

Subregion: 2

Design Flow: Baseline Flow:

Reclamation: Not reported

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: Completed Site Screening for site ranking.Approved Addendum to the

Final RAW for backydards for removal of the culvert and surrounding PCB contaminated soil. Completed RA. 295 cubic yards of PCB contaminated soils were excavated and disposed offsite.

Concentrations above the PCB cleanup goal remain in areas underneath a culvert which was discovered during the excavation. These areas are within the GE pApproved RAW for backyards. The selected cleanup alternative is excavation of PCB contaminated soils to residential standards and offsite disposal. Between June and October 1999, GE collected soil samples from residential properties located adjacenMNA

and Microcosm Study for Feasibility StudyApproved Addendum to Work Plan for Additional InvestigationConstruction of an approved surface water and groundwater oil plume control system and submitted procedures for long-term monitoring, operations, and maintenance. Groundwater was extracted and treated with oil/water separator and air stripping columCompleted RI/FS for PCB contamination.Backyard removal action completedApproved Public Participation Plan.Compilation and Summary of VOC Investigation Reports: 4/11/97 Phase I Onsite VOC Investigation Report, 1/1988 Phase II VOC Investigation Report, 7/1998 Phase III VOC Investigation Report, 10/1999 Phase IV VOC Investigation Report, 9/2000 Phase V VOCBaseline Human Health & Ecological Risk Assessment ReportCompleted Summary Report for Quarter.NOE issued for the RAW for backyard cleanup. Additional investigation and cleanup required for VOC contamination. Signed Consent Order to investigate and cleanup the volatile organic compounds (VOC) detected in the groundwater. Certified completion of site cleanup. Recorded Deed Restriction limiting property to industrial uses. Issued order to GE for site investigation and cleanup.Recorded Deed Restriction.Signed Consent Order to investigate and cleanup the PCB contamination. Investigation Report, and 10/2001 Shallow Soil and Groundwater Investigation Reportn.t to the Site on 54th Avenue. Soil samples were collected only from backvards of properties where permission was obtained. The soil investigations detected PCBs as high as 130 parts per million (ppm) on one property.roperty line. The culvert was left in place and the excavation was backfilled until further evaluation of cleanup alternatives.

Comments: Completed Site Screening for site ranking. Approved Addendum to the

Final RAW for backydards for removal of the culvert and surrounding PCB contaminated soil.Completed RA. 295 cubic yards of PCB

contaminated soils were excavated and disposed offsite.

Concentrations above the PCB cleanup goal remain in areas underneath a culvert which was discovered during the excavation. These areas are within the GE pApproved RAW for backyards. The selected cleanup alternative is excavation of PCB contaminated soils to residential standards and offsite disposal. Between June and October 1999, GE collected soil samples from residential properties located adjacenMNA and Microcosm Study for Feasibility StudyApproved Addendum to Work Plan for Additional InvestigationConstruction of an approved surface water and groundwater oil plume control system and submitted procedures for long-term monitoring, operations, and maintenance. Groundwater was extracted and treated with oil/water separator and air stripping columCompleted RI/FS for PCB contamination.Backyard removal action completedApproved Public Participation

Plan. Compilation and Summary of VOC Investigation Reports: 4/11/97 Phase I Onsite VOC Investigation Report, 1/1988 Phase II VOC Investigation Report, 7/1998 Phase III VOC Investigation Report, 10/1999 Phase IV VOC Investigation Report, 9/2000 Phase V VOCBaseline Human Health & Ecological Risk Assessment ReportCompleted Summary Report for Quarter.NOE issued for the RAW for backyard cleanup. Additional investigation and cleanup required for VOC contamination. Signed Consent Order to investigate and cleanup the volatile organic compounds (VOC) detected in the groundwater. Certified completion of site cleanup. Recorded Deed Restriction limiting property to industrial uses. Issued order to GE for site investigation and cleanup. Recorded Deed Restriction. Signed Consent Order to investigate and cleanup the PCB contamination. Investigation Report, and 10/2001 Shallow Soil and Groundwater Investigation Reportn.t to the Site on 54th Avenue. Soil samples were collected only from backyards of properties where permission was obtained. The soil investigations detected PCBs as high as 130 parts per million (ppm) on one property roperty line. The culvert was left in place and the excavation was backfilled until

Property Description: The property was developed and occupied in 1948 by Pacific Electric

Motor Company. Operations included manufacturing of specialty magnets, power supplies and components, the repair of motors, generators, transformers, and magnets. In 1975, a 2000 ggallon gasoline underground storage tank was installed on the property. The property was recently operated by Bay Area Powder Coatings and Landeros Iron Works. Between 1992 and 1993, a soil removal action for polychlorinated biphenyls (PCBs) was coonducted under the oversight of the Alameda County Health Care Services Agency (ACHSCA). From 1995 through 2002, the UST was removed and remedial activities conducted for soil and groundwater contaminated with petroleum hydrocarbons,

also under ACHSSCA oversight.

4825 SAN LEANDRO STREET Alternate Address:

Alternate City, St, Zip: OAKLAND, CA 94601

Background Info: The former Dutch Boy Paint Factory (the Site) is located at

4701- 4825 San Leandro Street, Oakland, Alameda County, California. The Site has been divided into three parcels (the Collins' parcel) (See SMPPD 01390003), parcel 1 (northern parcel) (See SMPPD 01390005) and parcel 2 (southern parcel). The Collins' parcel is located at 4701 San Leandro Street and parcels 1 and 2 are located at 4825 San Leandro Street. Parcels 1 and 2 are identified by Assessor's Parcel Number 034-2269-005. The property which DTSC calls Dutch Boy #3 consists of parcel

2. In 1918, NL Industries, Inc., a paint manufacturer,

purchased and developed the Site (about eight acres) to operate a paint factory. A series of additions were made in 1921-1948. The NL Industries. Inc. operated at the Site from 1919 to 1970. NL Industries, Inc. marketed its Dutch Process lead under the Dutch Boy Brand. The site soils are contaminated with elevated

levels of lead.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport. and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit compliance, and

corrective action activities required under RCRA.

Comments: Public Notice for Draft RAW for soilsRemoval Action Workplan requires

excavation of 2,000 cubic yards of soil contaminated with PCBs, TCE, PCE, DCE and petroleum hydrocarbons to Commercial/Industrial

levels. Notice of exemption for Removal Action WorkplanIn Summer 2002,

the Site was graded to remove debris and plant growth and the resulting material was consolidated and characterized. 196 cubic

yards of contaminated soil and debris contaminated with

polychlorinated biphenyls (PCBs), lead, copper, anIS&E Order issued to Union Pacific Railroad. The SAP is a workplan for collection of soil samples to delineate the contamination which was relocated during previous work on the site. Groundwater concentrations are within historical rangesRP to contact DTSC 1 week before starting work. Public Comment Period 10-06 to November 7, 2005 Mailed by TRC. Public Comment Period from 10-06 to 11-07-2005. Notice in the Oakland Tribune and El Mundo on 10-06-05No Comments Fieldwork done September 4, 5 and November 1. No Comments, Continue monitoring. DTSC is concerned with the apparent increases in wells MW-3A and MW-5A.

Background Info: The Site is located at the terminus of 73rd Avenue, west of San

> Leandro Street, in Oakland. The land was acquired by the Central Pacific Railroad in March 1895. Melrose Station (Elmhurst, CA) occupied the southwest corner of the site. This depot building was retired in 1933 and was removed. Central Pacific Railroad merged with Southern Pacific Railroad

Transportation Company. From September 1959 to March 1992, the site was operated as an auto salvage yard (Otto's Foreign Auto Salvage) under two successive tenants. Investigations conducted in 1998, 2000 and 2001 found polychlorinated byphenyls (PCBs), tetrachloethylene (PCE), trichloroethylene (TCE), and total petroleum hydrocarbons (TPH) in soil. Groundwater is also contaminated with PCBs, PCE, TCE and vinyl chloride above their respective drinking water standards. The site is adjacent to Aero Quality Plating (01340108) which has similar solvent

contamination in soil and groundwater.

Comments Date: 04042002

Comments: IS&E Order issued to Union Pacific Railroad.

Project Revenue Source Company: Not reported Actual: Project Revenue Source Addr: Not reported 10 ft. Project Revenue Source City, St, Zip: Not reported

> Project Revenue Source Desc: In November, 1987, the RPs were found in noncompliance with an imminent and

> > substantial endangerment order issued by the Department. Therefore, Bond funds have been utilized to remediate this site. DHS will undertake appropriate cost recovery activities. This site has not been identified as an NPL site, nor does it appear to be a NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for remediation of this site. EPA's Emergency Response Section funded a site stabilization IRM with federal funds. DHS has also funded IRM activities due to limited federal funds and

Site Description: Aero Quality Plating electroplated automotive and aircraft parts in baths using

copper, chromium, lead, nickel and zinc salts in aqueous solution at the site.

Hazardous Waste Desc: Wastes generated onsite included heavy metals and cyanide. Drums stored onsite

Direction Distance

Elevation Site Database(s) EPA ID Number

were open, leaking and corroded. Cyanide and acid solutions were stored onsite in open tanks. Sumps contain toxic sludge. Acids and caustics are incompatible. They are highly corrosive. Acids react with cyanide compounds to produce highly poisonous hydrogen cyanide gas.

Threat To Public Health & Env: There is suspected soil conta

There is suspected soil contamination and possible ground water contamination. There is a potenital for migration of contamination via surface water runoff to an adjacent stream. A nearby sanitary sewer showed contamination until the water service was disconnected. There was a potential for release of hydrogen cyanide gas into the building and offsite. The concern for a cyanide gas

release was mitigated by the removal of cyanide containing liquids and by the segregation of incompatible materials by DHS in July, 1987.

Site Activity Status: An interim remedial measure (IRM) was completed by EPA in May, 1987 to

stabilize hazardous wastes onsite. DHS has implemented a follow-up IRM to dispose of extermely hazardous waste stabilized by EPA. A second IRM is in progress for removal, disposal and recycling of the remaining 5000 gallons of aqueous hazardous waste solution, 114 tanks, 356 floor sections, 150 cinder blocks, 263 drums of hazardous waste and for the demolition of two buildings and building foundations. Also, some of the soilwill be removed as well. RI/FS

work by DHS is paralleling the IRM work as appropriate.

First quarter report shows similar values as the historical data for the monitoring wells. Sampling took place on March 5, 2007. No Comments. No comments, continue monitoring. Public notice for Draft RAW and NOE for groundwater. Public comment period is November 12 to December 19, 2007. Purex Industries Inc. and Honeywell Intl. signed a Voluntary Cleanup Agreement with DTSC to continue investigations and cleanup of the groundwater.LIEN - A lien for \$ 1,652,901.03 was placed on the property for past costs.DTSC issued an order Docket # I & /SE 92/93 007 to initiate a Removal Action to dispose of 94 55-gallon drums containing hazardous waste generated from installation of the monitoring wells.FDNC - Final Determination of Non-compliance of the order was issued to the property owners due to non-submittal of required documents, non-required action, and a letter on October 6, 1987, from the owners that they were unable to comply with the OrAn interim remedial action order (RAO) Docket # HSA 87/88 -003RA was approved by Department of Health Services (DHS), now DTSC (Department of Toxic Substances Control) and the United States Environmental Protection Agency (USEPA). Between July and OApproval of the NOE and RAW for groundwater for injection of HRC into the shallow groundwater to reduce the VOCs in the groundwater. The RAW was approved for treatment of the groundwater with HRC to reduce the VOCs in the shallow groundwater. Groundwater concentrations are within historic ranges.DTSC approved Remedial Investigation Reports for groundwater and soil. DTSC collected soil and groundwater samples from the site and surface water samples from Arroyo Viejo Creek. Trichloroethene (TCE), tetrachloroethene (PCE), and dichloroethene (DA Public Participation Plan was developed for the site.RP to contact DTSC 1 week before starting work. No comments Fact Sheet for Draft RAW and NOE for groundwater. Public comment period is November 12 to December 19, 2007.CE) were detected in the grab groundwater samples from three boreholes. Surface water sample analysis also showed TCE, PCE, and DCE. Low concentrations of TCE, PCE, and DCE were detected in the soil.ctober 1987; DHS, DTSC and the USEPA removed all containerized cyanide solutions and separated incompatible materials as part of an interim remedial action.drums contained soil cuttings, sludge, decontamination water, and developmental water containing PCE, TCE, and DCE. One drum contained trash and contaminated personal protective equipment. All 94 drums were disposed of to a Class I facility, der and do the ordered work. The soil was disposed off-site. Sampling confirmed that levels were to a residential standard. A

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Project Revenue Source Company: Not reported Actual: Project Revenue Source Addr: Not reported 16 ft. Project Revenue Source City, St, Zip: Not reported

> Project Revenue Source Desc: This site is projected to be remediated by the responsible parties with

> > reimbursement to DHS for its oversight and monitoring costs. If the RPs are unable to pay for remediation, another source of funds will need to be

identified.

Site Description: Ekotek is a waste oil recovery and recycling facility. Waste oil and Stoddard's

solvent were treated and stored onsite. Some of the hazardous waste may have

spilled onto the soil.

Hazardous Waste Desc: Waste oil or solvents may contaminate soil and may contain benzene, toluene,

phenol and lead.

Threat To Public Health & Env: Over 100,000 people live within a two mile radius of the site. A coastal

> wetland is located 4,000 feet away. Arrowhead Marsh is 1.4 miles away. The depth to ground water is from 5 to 28 feet. Approximately 18 irrigation and industrial wells are within 3 miles. The site is securely fenced and posted. The RP has indicated an interest in rehabilitating the facility as a unit for

Site Activity Status:

treatment of oily waste water.

234 THE CLOROX COMPANY CA BOND EXP. PLAN \$100833553 N/A

NNW **850 42ND AVENUE** 1/2-1 OAKLAND, CA 94608

0.919 mi. 4851 ft.

CA BOND EXP. PLAN: Relative:

Higher Reponsible Party: COST RECOVERY/OPERATION AND MAINTENANCE SITE

Project Revenue Source Company: Not reported Actual: Project Revenue Source Addr: Not reported 26 ft. Project Revenue Source City, St, Zip: Not reported

> Project Revenue Source Desc: The responsible party funded the characterization and remedial action at the

> > site. State Bond funds were used for oversight of the RPs activities. DHS will seek cost recovery for its direct costs including staff costs and overhead

related to the RI/FS and implementation of the RAP. DHS has budgeted \$5,000 per year for oversight of operation and maintenance of the ground water extraction

and treatment system during a forecasted 15 year period.

Site Description: The Clorox Company manufactures bleach and other products at this site. The

ground water contains mercury.

Hazardous Waste Desc: Mercury (Hg) has been found in the ground water at a concentration of up to

9.600 parts per billion (ppb).

Threat To Public Health & Env: Contaminated ground water eventually discharges to the Alameda Estuary, which

leads to the San Francisco Bay. Potential receptors to exposure of contaminants

in ground water include aquatic life in San Francisco Bay.

The responsible parties completed their investigation at the site to determine Site Activity Status:

the extent of contamination in October, 1985. The RAP was received by the Department in March, 1986. DHS issued a RAO in October, 1986 and the RPs completed the design of the treatment plant in June, 1987. Clorox began construction of the ground water treatment plant in October, 1987 and DHS granted the RPs a variance in December, 1987 to operate the plant starting in January, 1988. Clorox was issued waste discharge requirements from the Oakland RWQCB and met their discharge requirements in May, 1988. The site was certified

in late June, 1988.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: Completed RIFS. Site investigations detected mercury in both the

upper soils and shallow groundwater.Completed Design consisting of a groundwater extraction and treatment system.Recorded Deed Restriction limiting site to commercial/industrial uses. The site has a cap that will require annual inspections.Certified Site.Completed Five-Year Review. The site has been in operation and maintenance under the SF Regional Water Quality Control Board (RWQCB) oversight. In October 1995, Clorox requested a containment zone designation for the Site that would allow the cess2007 site inspection report completed and signed.ation of groundwater extraction and treatment. In its request to the RWQCB, Clorox proposed additional removal and treatment of contaminated soil and installation of monitoring wells. The RWQCB approved Clorox's proposal on December 13, 1995. Groundwater

monitoring is ongoing at the Site.

Background Info: The Clorox Oakland plant produced liquid bleach from 1919 to

1981. Elemental mercury was used in the process until 1957.

Comments Date: 01051996

Comments: Completed Five-Year Review. The site has been in operation and

Comments Date: 01051996

Comments: maintenance under the SF Regional Water Quality Control Board

Comments Date: 01051996

Comments: (RWQCB) oversight. Contaminant removal from the groundwater

Comments Date: 01051996

Comments: reached an asymptotic state. Further investigation by Chlorox

Comments Date: 01051996

Comments: identified a hot spot of mercury. In October 1995, Chlorox

Comments Date: 01051996

Comments: requested a containment plan designation allowing the cessation

Comments Date: 01051996

Comments: of the groundwater treatment system. After additional removal

Comments Date: 01051996

Comments: of contaminated soil and installation of monitoring wells, the

Comments Date: 01051996

Comments: RWQCB approved containment designation on December 13, 1995.

Comments Date: 01051996

Comments: The source areas were excavated and treated on-site using

Comments Date: 01051996

Comments: low-temperature thermal treatment technology to reduce mercury

Comments Date: 01051996

Comments: concentrations. Groundwater monitoring is still ongoing under

Comments Date: 01051996

Comments: RWQCB oversight.

Comments Date: 01131987

Comments: Recorded Deed Restriction limiting site to industrial uses.

Comments Date: 06301987

Comments: Completed Design consisting of a groundwater extraction and

Comments Date: 06301987
Comments: treatment system.
Comments Date: 06301988
Comments: Certified Site.
Comments Date: 10301985

Comments: Completed RIFS. Site investigations detected mercury in both

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Comments: Completed PEA (PA/SI). The PA was conducted as part of a contract

with the US EPA. The PA determined that no further action was required at the federal level. DTSC referred the project to the

Hazardous Waste Management Program because the site isunder their

jurisdiction.

Event: CA Prioritization, Facility or area was assigned a medium corrective

action priority.

Event date: 09/19/1991 Event: CA029EP

Event date: 09/19/1991 Event: CA049PA

Event date: 02/28/1992

Event: CA Prioritization, Facility or area was assigned a medium corrective

action priority.

Event date: 02/28/1992

Event: Stabilization Measures Evaluation, This facility is not amenable to

stabilization activity at the present time for reasons other than 1-it appears to be technically infeasible or inappropriate (NF) or 2-there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at

the facility, or other administrative considerations.

Event date: 01/01/1994

Event: Stabilization Measures Implemented, Primary measure is source removal

and/or treatment (e.g., soil or waste excavation, in-situ soil

treatment, off-site treatment).

Event date: 07/01/1995

Event: Stabilization Construction Completed

Event date: 01/01/1996 Event: RFI Imposition

Event date: 06/01/1996 Event: RFI Approved

Event date: 09/25/1997

Event: Current Human Exposures under Control, Yes, Current Human Exposures

Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant

changes at the facility.

Event date: 09/25/1997

Event: Igration of Contaminated Groundwater under Control, Yes, Migration of

Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of

significant changes at the facility.

Hazardous Waste Summary:

Used oil transporter:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Meeting to discuss additional work effort- the removal for soil Comments:

> impacted with lead from lead-based paint in the former housing area.DTSC approved the PEA report recommending further action in the

form of a Removal Action Workplan to address arsenic and

benzo(a)pyrene impacted soil.DTSC entered into an Environmental Oversight Agreement (Docket Number HSA-A 00/01-194) with Oakland

Unified School District to provide oversight for a Preliminary

Endangerment Assessment for the proposed Dewey School Expansion Site.DTSC entered into a Voluntary Cleanup Agreement (VCA) (Docket Number HSA-A 00/01-194-A) with the Oakland Unified School District

(Proponent). The purpose of this VCA is for the Proponent to

complete a Removal Action Workplan (RAW) for lead impactedProject

scope changed for arsenic removal. Additional area of lead

contamination added to project which caused an increase in the volume needed to be removed. Arsenic RAW Fact Sheet Fact Sheet was approved

and distributed in the Oakland communityCertication was signed

2/15/07HSA-A 00/01 194-A2. Ammended VCA to address additional actions for lead impacted soils. Field Oversight of PEA sampling DTSC issued a

Cost Recovery Memorandum to the Accounting Department to close out the project. Project was closed due to inactivity. DTSC completed review of the Phase I and determined a Preliminary Environmental Assessment is required. On 12/23/03, DTSC issued a final RAW approval based on resolution of the conditional approval issued on June 18,

2003 and the inclusion of 0.3 acre parcel investigated and reported in a Technical Memorandum dated May 13, 2003. The 0.3 acres was notDTSC approved the RACR and certifies that all removal actions have

been completed.DTSC approved the workplan submittal with

APN Description: Not reported

Comments: Meeting to discuss additional work effort- the removal for soil

impacted with lead from lead-based paint in the former housing area.DTSC approved the PEA report recommending further action in the

form of a Removal Action Workplan to address arsenic and

benzo(a)pyrene impacted soil.DTSC entered into an Environmental Oversight Agreement (Docket Number HSA-A 00/01-194) with Oakland

Unified School District to provide oversight for a Preliminary

Endangerment Assessment for the proposed Dewey School Expansion Site.DTSC entered into a Voluntary Cleanup Agreement (VCA) (Docket Number HSA-A 00/01-194-A) with the Oakland Unified School District (Proponent). The purpose of this VCA is for the Proponent to

complete a Removal Action Workplan (RAW) for lead impactedProject

scope changed for arsenic removal. Additional area of lead

contamination added to project which caused an increase in the volume needed to be removed. Arsenic RAW Fact Sheet Fact Sheet was approved

and distributed in the Oakland communityCertication was signed 2/15/07HSA-A 00/01 194-A2. Ammended VCA to address additional actions for lead impacted soils.Field Oversight of PEA samplingDTSC issued a

for lead impacted soils. Field Oversight of PEA samplingDTSC issued a Cost Recovery Memorandum to the Accounting Department to close out the project. Project was closed due to inactivity. DTSC completed review of the Phase I and determined a Preliminary Environmental Assessment is required. On 12/23/03, DTSC issued a final RAW approval

based on resolution of the conditional approval issued on June 18, 2003 and the inclusion of 0.3 acre parcel investigated and reported in a Technical Memorandum dated May 13, 2003. The 0.3 acres was notDTSC approved the RACR and certifies that all removal actions have been completed.DTSC approved the workplan submittal with

modifications listed in the letter.DTSC approved the Tech Memo with the recommendation that arsenic impacted soils will be addressed in the Removal Action Workplan.available during the PEA. The parcel is a portion of a railroad right-of-way and is also contaminated with

elevated arsenic.soils, and conduct a removal action, under the oversight of DTSC in an effort to satisfy DTSC's requirements, such that a No Further Remediation and Site Certification, regarding the Ascend Site (aka Dewey School Expansion), may be obtained from DTSC.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its

fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

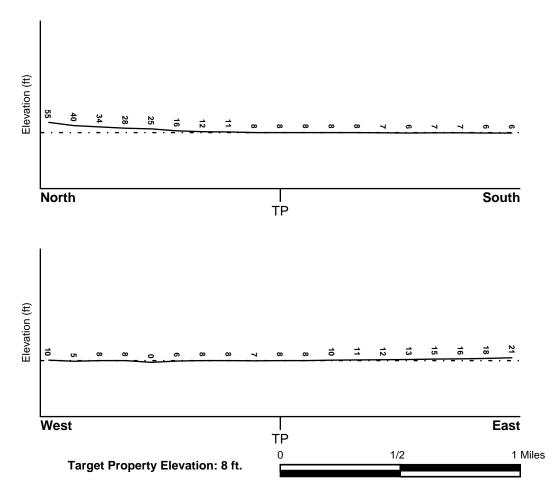

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class:

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class:

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 153 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map. USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations Source: Department of Conservation

Telephone: 916-323-1779

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208 Radon Database for California

Area Radon Information Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

Certified Sanborn® Map Report Enhancements for 2009

The accompanying Certified Sanborn Map Report reflects a number of enhancements that make it easier for you to review these historical maps. EDR has digitally joined together the more than one million fire insurance maps from the Sanborn Library collection so that your target property is centered, making it easier for you to review adjoining properties. Here is a list of the new features:

- · Your target property is centered on each map. You can quickly locate your target property and view adjoining properties. Plus, adjoining properties are included more often, reducing your need to refer to additional maps.
- · All maps are now displayed at a uniform scale. This makes it easier for you to view changes to the property over time.
- · We've increased coverage by adding thousands of new maps from 40 cities for years 1994-2007.
- · A new Map Key and Sheet Thumbnails let you reference sheet numbers, year and volume of original Sanborn Map panels used for this report.

For more information about the new enhancements to the Certified Sanborn Map Report, contact your EDR representative at 800-352-0050.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

The EDR-City Directory Abstract

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on atarget property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any questions or comments.

SUMMARY

City Directories:

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2006. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.
