RE: EXXON RAS #7-3399/2991 HOPYARD ROAD, PLEASANTON, CA

Dear Mr. Mueller:

Attached for your review and comment is a report entitled *Quarterly Ground Water Monitoring Report, Fourth Quarter 1994* for the above referenced site. This report, prepared by Delta Environmental Consultants, Inc., of Rancho Cordova, California, details the results of the November 1994 groundwater monitoring and sampling event.

If you have any questions or comments, please contact me at the above listed phone number.

Sincerely,

Marla D. Guensler
Senior Engineer

Subject: *Quarterly Ground Water Monitoring Report, Fourth Quarter 1994*
Exxon Retail Station No. 7-3399
2991 Hopyard Road
Pleasanton, California
Delta Project No. D094-836

Dear Ms. Guensler:

Delta Environmental Consultants, Inc. (Delta), has been authorized by Exxon Company, U.S.A. (Exxon), to conduct quarterly ground water monitoring at Exxon Retail Station No. 7-3399, located at 2991 Hopyard Road, Pleasanton, California. This letter report presents the results of quarterly ground water monitoring and sampling conducted on November 16, 1994. The location of the site is shown in Figure 1 and site features are illustrated in Figure 2. All work conducted at the site by Delta was performed in accordance with the field methods and procedures described in Enclosure A.

Ground Water Table Elevations, Flow Direction, and Hydraulic Gradient

Ground water table elevations were measured in six on-site monitoring wells (MW-1, MW-4, MW-7, MW-8, MW-9, MW-10) and three off-site monitoring wells (MW-5D, MW-5S, and MW-11) on November 16, 1994. Depths to ground water in the monitoring wells ranged from 52.09 to 55.47 feet below the tops of the well casings. Ground water table measurements are presented in Table 1. Prior ground water table measurements collected by RESNA Industries Inc. are included in Enclosure B. A water table contour map constructed from the ground water table elevations recorded on November 16, 1994, is included as Figure 3. The water table contours illustrated in Figure 3 indicate that ground water flowed toward the northeast with a hydraulic gradient of approximately 0.05.

Subjective Analysis

No liquid-phase petroleum hydrocarbons or hydrocarbon sheens were present in the wells during the November 1994 sampling visit.

Analytical Results

Ground water samples collected from monitoring wells MW-1, MW-4, MW-5D, MW-5S, MW-7, MW-8, and MW-10 on November 16, 1994, were submitted to a California-certified laboratory for analysis of benzene, toluene, ethylbenzene, total xylenes, and total volatile hydrocarbons as gasoline.

Ms. Marla Guensler
Exxon Company, U.S.A.
January 24, 1995
Page 2

Analytical test results are summarized in Table 2. Analytical test results prior to July, 1994 are included in Enclosure C. Ground water samples were not collected from monitoring wells MW-9 and MW-11 due to insufficient water in these wells. None of the ground water samples collected from any of the monitoring wells contained detectable concentrations of volatile hydrocarbons. Copies of the laboratory analytical reports are presented in Enclosure D.

Future Work

The next quarterly monitoring event for this site is scheduled for February 1995.

Remarks/Signatures

The interpretations contained in this report represent our professional opinions, and are based in part, on information supplied by the client. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

Delta recommends that copies of this report be forwarded to:

FIELD METHODS AND PROCEDURES

1.0 GROUND WATER AND LIQUID-PHASE HYDROCARBON DEPTH DETERMINATION

A water/petroleum interface probe was used to determine the thickness of liquid-phase hydrocarbon (LPH) if present, and a water level indicator was used to determine ground water depth in monitoring wells that do not contain LPH. Depth to ground water was measured from the top of each monitoring well casing. The tip of the water level indicator was subjectively analyzed for hydrocarbon sheen. All measurements and physical observations were recorded in the field.

2.0 SUBJECTIVE ANALYSIS OF GROUND WATER

Prior to purging, a water sample was collected from the monitoring well for subjective analysis. The sample was retrieved by gently lowering a clean, disposal bailer to approximately one-half the bailer length past the air/liquid interface. The bailer was then retrieved and the sample contained within the bailer was examined for floating LPH and the appearance of an LPH sheen.

3.0 MONITORING WELL PURGING AND SAMPLING

Monitoring wells were purged using a centrifugal pump or bailer until pH, temperature, and conductivity of the purge water had stabilized and a minimum of three to four well volumes of water had been removed. Ground water removed from the wells was stored in 55-gallon barrels at the site. The barrels were labeled with corresponding monitoring well numbers and the date of purging. After purging, ground water levels were allowed to stabilize. A ground water sample was then removed from each of the wells using a disposal bailer. If the well was purged dry, it was allowed to sufficiently recharge and a sample was collected. Samples were collected in air-tight vials, appropriately labeled, and stored on ice from the time of collection through the time of delivery to the laboratory. A chain-of-custody form was completed to ensure sample integrity. Ground water samples were transported to the laboratory and analyzed within the EPA-specified holding times for the requested analyses. Purge water will be collected from the storage barrels in a vacuum truck and transported to an appropriate facility for treatment and/or disposal.

Well elevation relative to Mean Sea Level (MSL).
 Measurements in feet

NA : Not accessible

• : Not measured because of installed product-skimmer pump.

** : Thickness of floating product after the well was allowed to recharge for approximately 3 hours.

▼ : Anomalous water level possibly due to recharge from a perched water zone.

: Water level during pumping of MW-7.

: Water inspected in oil-water separator tank.

ENCLOSURE C

Ground Water Analytical Results Prior to July 1994
