RE: EXXON RAS #7-3399/2991 HOPYARD ROAD, PLEASANTON, CA

Dear Mr. Seery:

This letter is to confirm the submittal of the report entitled *Quarterly Groundwater Monitoring Report, Second Quarter 1996* for the above referenced Exxon site. A copy of this report was hand delivered on July 17, 1996 during our meeting. The report, prepared by Delta Environmental Consultants, Inc., of Rancho Cordova, California, details the results of the May 1996 monitoring and sampling event.

If you have any questions or comments, please contact me at (510) 246-8776.

Sincerely,

Marla D. Guensler
Senior Engineer

Subject: *Quarterly Ground Water Monitoring Report, Second Quarter 1996*
Exxon Retail Station No. 7-3399
2991 Hopyard Road
Pleasanton, California
Delta Project No. D094-836

Dear Ms. Guensler:

Delta Environmental Consultants, Inc. (Delta), has been authorized by Exxon Company, U.S.A. (Exxon), to conduct quarterly ground water monitoring at Exxon Service Station No. 7-3399, located at 2991 Hopyard Road, Pleasanton, California. This letter report presents the results of quarterly ground water monitoring and sampling conducted for the second quarter 1996. The location of the site is shown in Figure 1 and site features are illustrated in Figure 2. All work conducted at the site by Delta was performed in accordance with the field methods and procedures described in Enclosure A.

Ground Water Elevations, Flow Direction, and Hydraulic Gradient

On May 31, 1996, ground water elevations were measured in on-site monitoring wells MW-1, MW-4, MW-7, MW-8, MW-9, MW-10 and off-site monitoring wells MW-5D, MW-5S, and MW-11. Depth to ground water in the monitoring wells ranged from 34.17 (MW-1) to 36.61 (MW-10) feet below the top of the well casings excluding monitoring well MW-5D and MW-8 which are screened in lower water bearing zones. Ground water elevation levels increased an average of 1.5 feet in the monitoring wells since the March 1996 event. Cumulative ground water elevation measurements recorded are presented in Table 1.

A water table contour map constructed from the ground water elevations recorded on May 31, 1996, is included as Figure 3. The water table contours illustrated in Figure 3 indicate that ground water in the upper aquifer flowed toward the northeast and southeast across the site. Based on the water table contour map, the estimated hydraulic gradient is approximately 0.01. The ground water elevation measurements from monitoring wells MW-5D and MW-8 were not included in the contour map, because these wells are screened in a lower zone.

Subjective Analysis

No liquid-phase petroleum hydrocarbons or hydrocarbon sheens were present in the wells during the May 1996, sampling visit.

Ms. Maria Guensler
Exxon Company, U.S.A.
July 12, 1996
Page 2

Ground Water Analytical Results

Ground water samples were collected from monitoring wells MW-1, MW-4, MW-5S, MW-5D, MW-7, MW-8, MW-9, MW-10, and MW-11 on May 31, 1996, and submitted to Sequoia Analytical (a California-certified laboratory) for analysis of benzene, toluene, ethylbenzene, total xylenes, methyl tertiary butyl ether (MTBE) by EPA Method 8020, and total petroleum hydrocarbons (TPH) as gasoline by EPA Method 8015 Modified. Cumulative analytical laboratory results are summarized in Table 2.

The analytical results reported that all hydrocarbon constituents in samples collected from the monitoring wells were below the laboratory detection limits with the exception of the samples obtained from monitoring wells MW-1, MW-7, and MW-9. The analytical results reported the ground water samples from MW-1 and MW-7 did not contain detectable concentrations of benzene, toluene, ethylbenzene, and total xylenes, however, TPH as gasoline was 52 and 50 micrograms per liter ($\mu\text{g}/\text{L}$), respectively. Monitoring well MW-9 contained benzene at a concentration of 2,800 $\mu\text{g}/\text{L}$, toluene at 510 $\mu\text{g}/\text{L}$, ethylbenzene at < 50 $\mu\text{g}/\text{L}$, total xylenes at 400 $\mu\text{g}/\text{L}$, and TPH as gasoline at a concentration of 8,200 $\mu\text{g}/\text{L}$. MTBE was not detected in any of the ground water samples above the laboratory detection limits. A copy of the laboratory analytical report for the May 31, 1996, sampling event is included in Enclosure B.

Discussion

Concentrations of hydrocarbons in the deeper monitoring wells, MW-8 and MW-5D, were below the laboratory detection limits for all analytes. Monitoring of residual dissolved hydrocarbons in the deep monitoring wells will continue, due to the proximity of the City of Pleasanton municipal wells northeast of the site.

Future Work

The next quarterly monitoring event for this site is scheduled for September 1996.

Remarks/Signatures

The interpretations contained in this report represent our professional opinions, and are based in part, on information supplied by the client. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

	05/31/96		35.34	286.43	No LPH

^a The tops of well risers surveyed relative to mean sea level.

^b Not measured.

^c Water level recorded during pumping of MW-7.

^d Not calculated due to liquid phase hydrocarbons present.

^e Anomalous water level possibly due to recharge from a perched water zone.

^f Casing head cut to lower elevation.

^g Casing head damaged by construction.

NOTE: Well measurements and observations between April 6, 1988 and November 23, 1994, were recorded by RESNA, Inc.

FIELD METHODS AND PROCEDURES

1.0 GROUND WATER AND LIQUID-PHASE HYDROCARBON DEPTH ASSESSMENT

A water/petroleum interface probe was used to assess the thickness of liquid-phase hydrocarbon (LPH) if present, and a water level indicator was used to assess ground water depth in monitoring wells that do not contain LPH. Depth to ground water was measured from the top of each monitoring well casing. The tip of the water level indicator was subjectively analyzed for hydrocarbon sheen. All measurements and physical observations were recorded in the field.

2.0 SUBJECTIVE ANALYSIS OF GROUND WATER

Prior to purging, a water sample was collected from the monitoring well for subjective assessment. The sample was retrieved by gently lowering a clean, disposal bailer to approximately one-half the bailer length past the air/liquid interface. The bailer was then retrieved and the sample contained within the bailer was examined for floating LPH and the appearance of an LPH sheen.

3.0 MONITORING WELL PURGING AND SAMPLING

Monitoring wells were purged using a centrifugal pump until pH, temperature, and conductivity of the purge water had stabilized and a minimum of three well volumes of water had been removed. Ground water removed from the wells was stored in 55-gallon barrels at the site. The barrels were labeled with corresponding monitoring well numbers and the date of purging. After purging, ground water levels were allowed to stabilize. A ground water sample was then removed from each of the wells using a disposal bailer. If the well was purged dry, it was allowed to sufficiently recharge and a sample was collected. Samples were collected in air-tight vials, appropriately labeled, and stored on ice from the time of collection through the time of delivery to the laboratory. A chain-of-custody form was completed to document possession of the samples. Ground water samples were transported to the laboratory and analyzed within the EPA-specified holding times for the requested analyses. Purge water will be collected from the storage barrels in a vacuum truck and transported to an appropriate facility for treatment and/or disposal.

 Project Manager/Sacramento Laboratory

Please Note:

The LCS is a control sample of known, interferent free matrix that is analyzed using the same reagents, preparation and analytical methods employed for the samples. The LCS % recovery data is used for validation of sample batch results. Due to matrix effects, the QC limits for MS/MSD's are advisory only and are not used to accept or reject batch results.
