Dear Mr. Seery:

Attached for your review and comment is a copy of the *Report of Groundwater Monitoring, Second Quarter 2001* for the above-referenced site. The report was prepared by ETIC Engineering, Inc. of Pleasant Hill, California, and summarizes the results of the June 2001 sampling event. Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached report is true and correct.

If you have any questions or comments, please contact me at (925) 246-8747.

Sincerely,

Gene N. Ortega

1. INTRODUCTION

Former Exxon Retail Site (RS) 7-3399 is an active retail service station located at 2991 Hopyard Road, on the southeast corner of the intersection with Valley Avenue in Pleasanton, California. The site has six pump islands and two 10,000-gallon and one 12,000-gallon double-walled fiberglass underground storage tanks (USTs) for dispensing three grades of gasoline. Auto repair is conducted in the onsite station building. Operation of the site was taken over by Valero Energy Corporation in June 2000.

2. SUMMARY OF RESULTS

On 25 June 2001, groundwater was gauged in wells MW1, MW4, MW5D, MW5S, MW7, MW8, MW9A, MW10, MW11, MW12A, MW13, MW14, PMW1-PMW6, VR1, VR2, OW1, and OW2. Groundwater samples were collected from wells MW1, MW4, MW5D, MW5S, MW7, MW8, MW9A, MW10, MW11, MW12A, MW13, MW14, PMW1-PMW6, and OW2. The samples were analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-g), for benzene, toluene, ethylbenzene, and total xylenes (BTEX), and for methyl t-butyl ether (MTBE). Wells VR2 and OW1 were dry on 25 June.

The current groundwater monitoring data are presented in boldface type in Table 1, along with previous data, and current groundwater elevations are shown in Figure 1. The groundwater flow direction on 25 June was to the east in the perched zone, with a gradient of approximately 0.03 calculated using wells PMW1-PMW6 and OW2. However, due to variability in groundwater elevations observed in perched zone wells (PMW1-PMW6, OW1, and OW2) during this and previous monitoring events, it is concluded that a truly representative gradient across the site cannot be estimated for the perched zone. Groundwater elevations in the perched zone may be influenced by the UST backfill and water infiltration from the nearby planter. The groundwater flow direction on 25 June was to the northwest at the water table (Zone 1), with a gradient of approximately 0.004 calculated using wells MW5S, MW7, and MW10. The groundwater flow direction in the deepest zone was to the southwest on 25 June with a gradient of approximately 0.042 calculated using wells MW8, MW12A, and MW14, the three wells screened in this zone.

After the depths to water were measured, the wells were purged. Field parameters of pH, temperature, and electrical conductance of the purged water were measured for approximately every well casing volume removed during purging. When the field parameters were stable (less than a 10 percent change from the previous reading for temperature and electrical conductance and not more than 0.1 pH units) and approximately 3 casing volumes were removed from each well, samples were collected in 40-ml glass VOA vials and placed in an ice-filled cooler. Wells that purged dry were allowed to recover prior to sampling. Well MW9A, which is connected to the groundwater extraction system operating at the site, was sampled directly from the extraction system port. The groundwater extraction pump was not operable and could not be removed from well VR1 on 25 June, and therefore the well could not be purged or sampled. All samples were handled and transported under chain of custody. Copies of the field documents are included as Appendix A.

The samples were submitted to Sequoia Analytical in Morgan Hill, California, and analyzed for TPH-g by Cal EPA-modified EPA Method 8015, and for BTEX and MTBE by EPA Method 8020. Samples in which MTBE was detected were also analyzed for MTBE by EPA Method 8260B for confirmation. The results for these analyses are presented in boldface type, along with previous

analytical data, in Table 1, and are shown in Figure 1. The laboratory analytical report and chain-of-custody documentation are included in Appendix B.

3. REMEDIATION SYSTEM

Construction of a groundwater extraction system (GES) at the site was completed in March 2001. Groundwater is discharged under a permit from the Dublin-San Ramon Services District. [REDACTED] consists of ~~submersible pumps in wells VR1 and MW9A, pneumatic pumps in wells OW1 and OW2,~~ bag filters, an air compressor, two 2,000-pound liquid-phase carbon vessels in series, and a third 2,000-pound carbon vessel on standby. ETIC Engineering, Inc. (ETIC) started the GES on 12 March 2001.

As of 20 July 2001, the GES had treated 1,102,500 gallons of groundwater and removed approximately 0.44 pounds of hydrocarbons and 0.07 pounds of MTBE since startup on 12 March 2001. Cumulative performance data for the GES are included in Table 2, and a graph showing influent TPH and MTBE concentrations and TPH and MTBE mass removed since initial startup is included as Figure 2. Table 3 presents GES analytical data.

The GES operated continuously during the second quarter. The extraction pump in well VR1 was repaired on 20 July 2001. ETIC requested permission from the Alameda County Health Agency to stop groundwater extraction from well MW9A, and approval was granted. ETIC shut off groundwater extraction from well MW9A on 7 August 2001.

4. WORK PROPOSED FOR NEXT QUARTER

Groundwater in monitoring wells will be gauged and sampled in September 2001. Groundwater samples will be analyzed for TPH-g, BTEX, and MTBE.

Operation of the groundwater extraction system will continue.

a = Water level recorded during pumping of MW7.

b = Anomalous water level possibly due to recharge from a perched water zone.

c = Casing head cut to lower elevation.

d = Casing head damaged by construction.

e = Results obtained past the technical holding time.

f = Methyl tertiary butyl ether by EPA Method 8260.

g = Unidentified Hydrocarbon C6-C12.

h = Analysis performed outside of EPA recommended hold time.

Depth to groundwater = Measured from notch/mark on north edge of well casing.

LPH = Liquid-phase hydrocarbons.

TPH = Total Petroleum Hydrocarbons.

MTBE = Methyl tertiary butyl ether.

NA = Not analyzed.

NC = Not calculated.
