RE: Second Quarter 1999 Groundwater Monitoring & Sampling Report
Tosco (Unocal) Service Station #3292
15008 East 14th Street
San Leandro, California

Dear Mr. De Witt:

This report documents the quarterly groundwater monitoring and sampling event performed by Gettler-Ryan Inc. (G-R). On May 12, 1999, field personnel monitored and sampled thirteen wells (MW-1 through MW-11, MW-2(SP) and MW-3(SP)) at the above referenced site. A joint monitoring event was not conducted.

Static groundwater levels were measured and all wells were checked for the presence of separate-phase hydrocarbons. Separate-phase hydrocarbons were not present in the wells. Static water level data and groundwater elevations for the referenced site are summarized in Table 1 and Dissolved Oxygen Concentrations are summarized in Table 2. Joint Groundwater Monitoring Data for former events are summarized in Tables 3 and 4. A Potentiometric Map is included as Figure 1.

Groundwater samples were collected from the monitoring wells as specified by G-R Standard Operating Procedure - Groundwater Sampling (attached). The field data sheets are also attached. The samples were analyzed by Sequoia Analytical. Analytical results are summarized in Table 1 and a Concentration Map is included as Figure 2. The chain of custody document and laboratory analytical reports are also attached.

Sincerely,

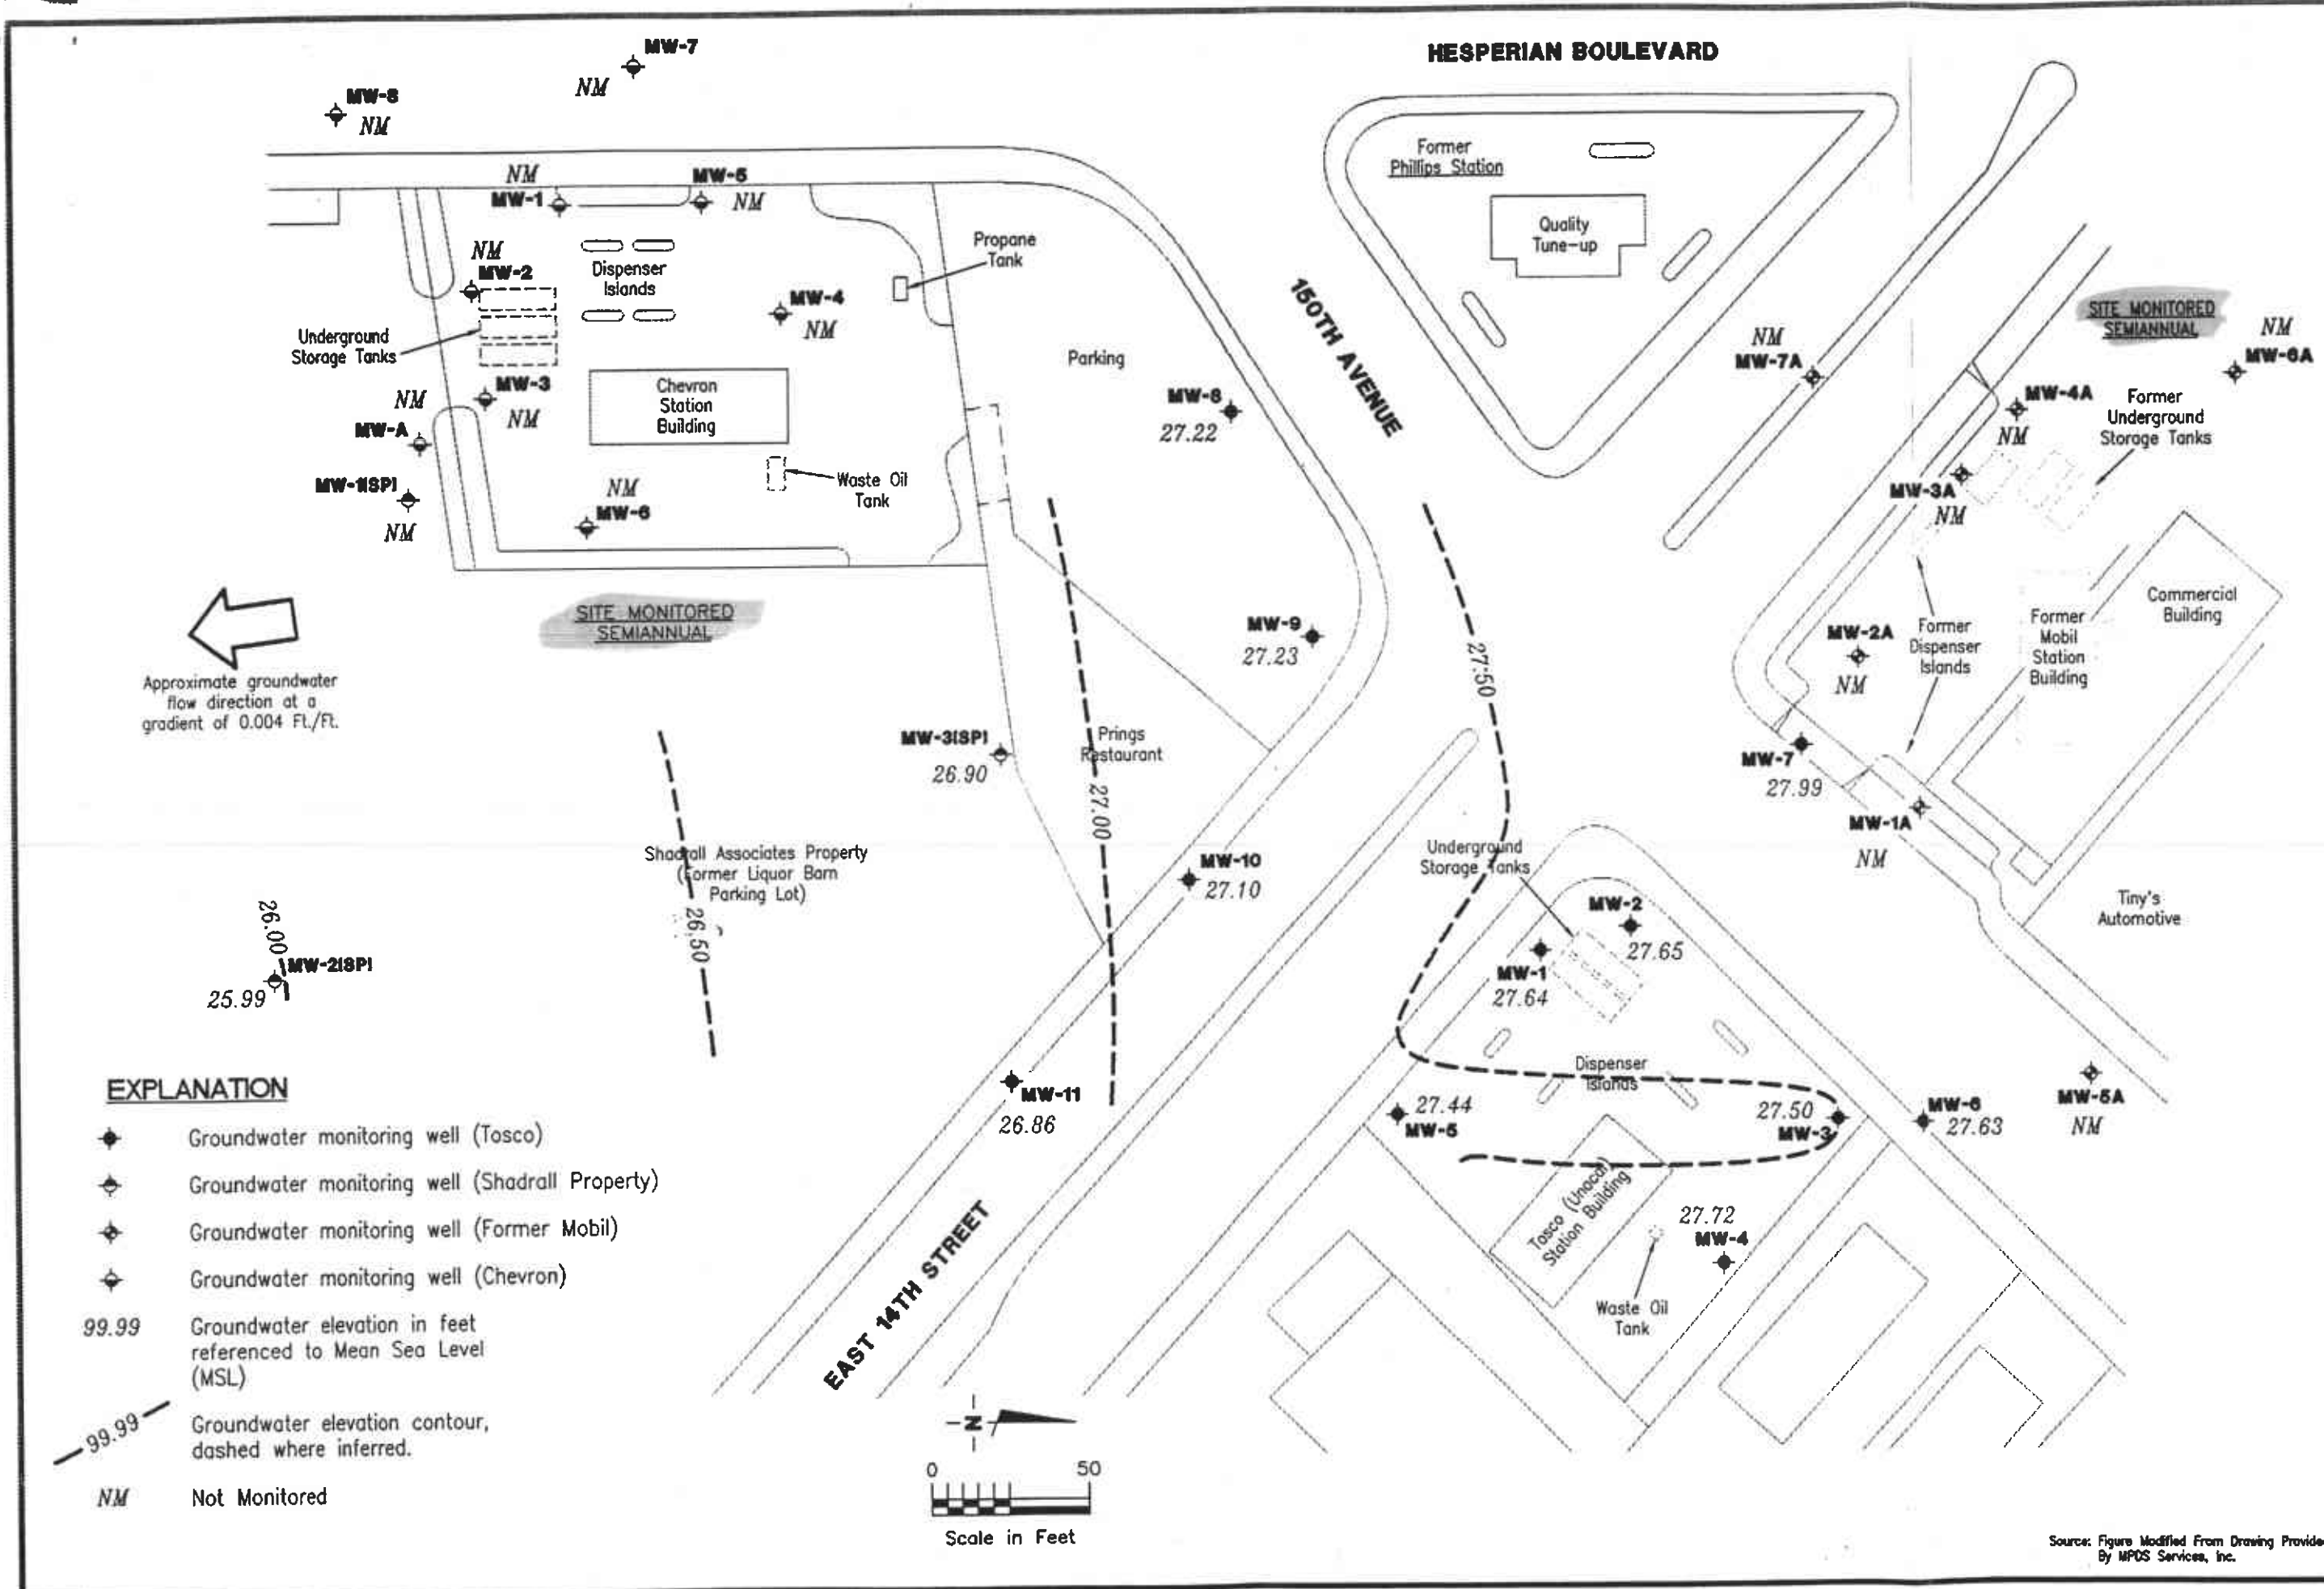

Deanna L. Harding
Deanna L. Harding
Project Coordinator

Barbara Sieminski

Project Geologist, R.G. No. 6676

Figure 1: Potentiometric Map
Figure 2: Concentration Map
Table 1: Groundwater Monitoring Data and Analytical Results
Table 2: Dissolved Oxygen Concentrations
Table 3: Joint Groundwater Monitoring Data - Former Mobil Facility
Table 4: Joint Groundwater Monitoring Data - Chevron Facility
Attachments: Standard Operating Procedure - Groundwater Sampling
Field Data Sheets
Chain of Custody Document and Laboratory Analytical Reports

3292.qml

Approximate groundwater flow direction at a gradient of 0.004 FL./FL.

EXPLANATION

- ◆ Groundwater monitoring well (Tosco)
- ◆ Groundwater monitoring well (Shadrall Property)
- ◆ Groundwater monitoring well (Former Mobil)
- ◆ Groundwater monitoring well (Chevron)
- 99.99 Groundwater elevation in feet referenced to Mean Sea Level (MSL)
- - - 99.99 Groundwater elevation contour, dashed where inferred.
- NM Not Monitored

POTENTIOMETRIC MAP
 Tosco (Unocal) Service Station No. 3292

DATE: May 12, 1999
 REVISION: DATE

JOB NUMBER: 180105

Source: Figure Modified From Drawing Provided By MPCS Services, Inc.

EXPLANATION

- ◆ Groundwater monitoring well (Tosco)
 - ◆ Groundwater monitoring well (Shadrall Property)
 - ◆ Groundwater monitoring well (Former Mobil)
 - ◆ Groundwater monitoring well (Chevron)
- A/B/C TPH(G) (Total Petroleum Hydrocarbons as Gasoline)/Benzene/MTBE concentrations in ppb
- ND Not Detected
- NS Not Sampled

CONCENTRATION MAP
 Tosco (Unocal) Service Station No. 3292
 15008 East 14th Street
 San Leandro, California

 San Leandro, California

EXPLANATIONS:

Groundwater monitoring data and laboratory analytical results prior to February 12, 1998, were compiled from reports prepared by MPDS Services, Inc.

| | | |
|---|------------------------------------|--------------------------------|
| TOC = Top of Casing elevation | B = Benzene | ppb = Parts per billion |
| DTW = Depth to Water | T = Toluene | ND = Not Detected |
| (ft.) = Feet | E = Ethylbenzene | -- = Not Measured/Not Analyzed |
| GWE = Groundwater Elevation | X = Xylenes | (SP) = Shadrall Property wells |
| msl = Relative to mean sea level | MTBE = Methyl tertiary butyl ether | |
| TPH(G) = Total Petroleum Hydrocarbons as Gasoline | | |

* TOC elevations are relative to Mean Sea Level (msl), per a Benchmark located at the northwest corner of East 14th Street and 150th Avenue (Elevation = 36.88 feet msl). TOC elevations for MW-2(SP) and MW-3(SP) are relative to msl, per Chevron monitoring well MW-6 used as a benchmark (Elevation = 36.92 feet msl). On April 16, 1998, three wells were re-surveyed using City of San Leandro Benchmark being a cinch nail in the top of curb at a catch basin at the westerly corner of East 14th Street and 150th Avenue, Benchmark (Elevation = 36.883 feet, msl). Prior to September 24, 1993, DTW measurement were taken from the top of well covers.

- 1 Laboratory report indicates the hydrocarbons detected appeared to be a gasoline and non-gasoline mixture.
- 2 Laboratory report indicates the hydrocarbons detected did not appear to be gasoline.
- 3 The analytical results of the groundwater were inconsistent with the previous analytical results for this well. The laboratory re-analyzed the sample past hold time; therefore the results may be biased low.
- 4 The monitoring well was resampled on November 20, 1995. The vial containing the water sample collected from this well on November 2, 1995, was inadvertently broken by the laboratory.
- 5 All EPA Method 8010 constituents were ND.
- 6 The monitoring wells MW-8 and MW-11 were resampled on February 14, 1996. The vials containing the water samples collected from the wells on February 8, 1996, were inadvertently broken by the laboratory.
- 7 Detection limit raised. Refer to analytical results.
- 8 Laboratory report indicates gasoline and unidentified hydrocarbons < C7.
- 9 Laboratory report indicates gasoline and discrete peaks C6-C12.
- 10 Laboratory report indicates gasoline and unidentified hydrocarbons C6-C8.
- 11 Laboratory report indicates weathered gasoline C6-C12.
- 12 **MTBE by EPA Method 8260.**
- 13 Laboratory report indicates unidentified hydrocarbons > C8.
- 14 Laboratory report indicates unidentified hydrocarbons > C6.
- 15 Laboratory report indicates weathered gas and unidentified hydrocarbons > C6.
- 16 Laboratory report indicates gasoline and unidentified hydrocarbons < C6.

EXPLANATIONS:

Groundwater monitoring data provided by Blaine Tech Services, Inc. Site monitored on a semi-annual basis.

TOC = Top of Casing elevation
DTW = Depth to Water
(ft.) = Feet

GWE = Groundwater Elevation
msl = Relative to mean sea level
-- = Not Available

* TOC elevations have been surveyed relative to msl.

STANDARD OPERATING PROCEDURE - GROUNDWATER SAMPLING

Gettler-Ryan Inc. field personnel adhere to the following procedures for the collection and handling of groundwater samples prior to analysis by the analytical laboratory. Prior to sample collection, the type of analysis to be performed is determined. Loss prevention of volatile compounds is controlled and sample preservation for subsequent analysis is maintained.

Prior to sampling, the presence or absence of free-phase hydrocarbons is determined using a MMC flexi-dip interface probe. Product thickness, if present, is measured to the nearest 0.01 foot and is noted in the field notes. In addition, static water level measurements are collected with the interface probe and are also recorded in the field notes.

After water levels are collected and prior to sampling, each well is purged a minimum of three well casing volumes of water using pre-cleaned pumps (stack, suction, Grundfos), or polyvinyl chloride bailers. Temperature, pH and electrical conductivity are measured a minimum of three times during the purging. Purging continues until these parameters stabilize.

Groundwater samples are collected using disposable bailers. The water samples are transferred from the bailer into appropriate containers. Pre-preserved containers, supplied by analytical laboratories, are used when possible. When pre-preserved containers are not available, the laboratory is instructed to preserve the sample as appropriate. Duplicate samples are collected for the laboratory to use in maintaining quality assurance/quality control standards. The samples are labeled to include the job number, sample identification, collection date and time, analysis, preservation (if any), and the sample collector's initials. The water samples are placed in a cooler, maintained at 4°C for transport to the laboratory. Once collected in the field, all samples are maintained under chain of custody until delivered to the laboratory.

The chain of custody document includes the job number, type of preservation, if any, analysis requested, sample identification, date and time collected, and the sample collector's name. The chain of custody is signed and dated (including time of transfer) by each person who receives or surrenders the samples, beginning with the field personnel and ending with the laboratory personnel.

A laboratory supplied trip blank accompanies each sampling set. For sampling sets greater than 20 samples, 5% trip blanks are included. The trip blank is analyzed for some or all of the same compounds as the groundwater samples.

As requested by Tosco Marketing Company, the purge water and decontamination water generated during sampling activities is transported to Tosco - San Francisco Area Refinery, located in Rodeo, California.

|---|---------|---------|
| Report Limit Multiplication Factor: | 1.0 | 10 |
| Date Analyzed: | 5/20/99 | 5/20/99 |
| Instrument Identification: | HP-2 | HP-2 |
| Surrogate Recovery, %: (QC Limits = 70-130%) | 100 | * |

Purgeable Hydrocarbons are quantitated against a fresh gasoline standard.
Analytes reported as N.D. were not detected above the stated reporting limit.

SEQUOIA ANALYTICAL, #1271

Julianne Fegley
Julianne Fegley
Project Manager

Please Note:

* Surrogate recovery above control limit due to coelution.

|----------------------------|--------|--------|--------|--------|
|----------------------------|--------|--------|--------|--------|

Please Note:
The LCS is a control sample of known, interferent free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
