**Re:** Third quarter 1995 groundwater monitoring program results and intrinsic bioremediation study, ARCO service station 2185, Oakland, California

Dear Mr. Whelan:

This letter presents the results of the third quarter 1995 groundwater monitoring program at ARCO Products Company (ARCO) service station 2185, 9800 East 14th Street, Oakland, California (Figure 1). The quarterly monitoring program complies with Alameda County Health Care Services Agency (ACHCSA) requirements regarding underground tank investigations.

## **BACKGROUND**

Seven on-site groundwater monitoring wells (MW-1 through MW-6 and MW-8), three off-site groundwater monitoring well (MW-7, MW-9, and MW-10), and two vapor extraction wells (VW-1 and VW-2) were installed as part of a comprehensive site assessment conducted at this site between May 1991 and April 1994. Please refer to forthcoming *Well Installation Report, ARCO Service Station 2185, Oakland, California* for more details.

## **MONITORING PROGRAM FIELD PROCEDURES**

A program of quarterly groundwater monitoring was initiated during the third quarter of 1992 to provide information concerning water quality, flow direction, and gradient consistent with ACHCSA and Regional Water Quality Control Board (RWQCB) requirements for underground fuel tank investigations. Water levels are measured quarterly in wells MW-1 through MW-10. Wells MW-1 and MW-4 are sampled annually, during the first quarter of the year. Wells MW-2, MW-3, and MW-5 through MW-10 are sampled quarterly.

EMCON performed the third quarter 1995 groundwater monitoring event on September 20, 1995. Field work this quarter included (1) measuring depths to groundwater and subjectively analyzing groundwater for the presence of floating product

in wells MW-1 through MW-10, (2) purging and subsequently sampling groundwater monitoring wells MW-2, MW-3, and MW-5 through MW-10 for laboratory analysis, and (3) directing a state-certified laboratory to analyze the groundwater samples. Copies of all field data sheets from the third quarter 1995 groundwater monitoring event are included in Appendix A.

## **ANALYTICAL PROCEDURES**

Groundwater samples collected during third quarter 1995 monitoring were analyzed for total petroleum hydrocarbons as gasoline (TPHG), benzene, toluene, ethylbenzene, and total xylenes (BTEX), and methyl-tert-butyl ether (MTBE). Groundwater samples were prepared for analysis by U.S. Environmental Protection Agency (USEPA) method 5030 (purge and trap). Groundwater was analyzed for TPHG by the methods accepted by the Department of Toxic Substances Control, California Environmental Protection Agency (Cal-EPA), and referenced in *Leaking Underground Fuel Tank (LUFT) Field Manual* (State Water Resources Control Board, October 1989). Samples were analyzed for BTEX and MTBE by USEPA method 8020, as described in *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (EPA SW-846, November 1986, third edition). These methods are recommended in *Tri-Regional Board Staff Recommendations for Preliminary Evaluation and Investigation of Underground Tank Sites* (August 10, 1990) for analysis of samples from petroleum-hydrocarbon-impacted sites.

As requested by ACHCSA in a letter dated June 1, 1995, additional samples were collected from selected monitoring wells and analyzed for indicators of intrinsic biodegradation. Groundwater samples were collected from monitoring wells MW-2, MW-3, MW-5, MW-6, and MW-8. Samples were analyzed for total heterotrophic microorganisms and hydrocarbon-specific degraders using spread plate techniques based on *Methods of Soil Analysis, Part 2 Chemical and Microbiological Properties* (American Society of Agronomy, Soil Science Society of America, 1982, Madison, WI Chapter 37), and Method 9215C, *Standard Methods for the Examination of Water and Wastes, 17th Edition, 1989*. In addition, groundwater samples were also analyzed for ammonia as nitrogen, total Kjeldahl nitrogen, pH, orthophosphate, and dissolved potassium using U.S. EPA Methods 350.3, 351.4, 150.1, 365.2, and 6010A, respectively. Redox potential was measured in the field with a redox potential probe, and in the laboratory using ASTM Method D1498-76. Dissolved-oxygen readings were collected in the field using a colorimetric analysis.

## **MONITORING PROGRAM RESULTS**

Results of the third quarter 1995 groundwater monitoring event are summarized in Table 1 and illustrated in Figure 2. Historical groundwater elevation data, including top-of-casing elevations, depth-to-water measurements, calculated groundwater

elevations, floating-product thickness measurements, and groundwater flow direction and gradient data, are summarized in Table 2. Table 3 summarizes historical laboratory data for analysis of petroleum hydrocarbons and their constituents. The results of microbial enumeration and inorganic chemical analyses for the evaluation of intrinsic bioremediation are summarized in Table 4. Copies of the third quarter 1995 analytical results and chain-of-custody documentation are included in Appendix B.

Groundwater elevation data collected on September 20, 1995, indicate that groundwater beneath the site flows west-southwest with an approximate hydraulic gradient of 0.005 foot per foot. Figure 2 illustrates groundwater contours and analytical data for the third quarter of 1995.

Groundwater samples from wells MW-9 and MW-10 did not contain detectable concentrations of TPHG, BTEX, or MTBE. Samples from well MW-7 contained 400 micrograms per liter ( $\mu\text{g/L}$ ) of discrete components eluting in the gasoline range (the chromatogram does not match the typical gasoline fingerprint), but did not contain detectable concentrations of TPHG, BTEX, or MTBE. Based on discussions with the laboratory chemist, the discrete components eluting in the gasoline range appear to be several chlorinated compounds. A copy of the chromatogram for TPHG analysis of groundwater from well MW-7 is included in Appendix B. Samples from well MW-8 contained 470  $\mu\text{g/L}$  of TPHG and 52  $\mu\text{g/L}$  of MTBE, but did not contain detectable concentrations of benzene.

Samples from wells MW-2, MW-3, MW-5, and MW-6 contained concentrations of TPHG ranging from 1,200 to 3,300  $\mu\text{g/L}$ , and concentrations of benzene ranging from 1 to 47  $\mu\text{g/L}$ . Samples from wells MW-3 and MW-5 contained 280 and 70  $\mu\text{g/L}$  of MTBE, respectively, but samples from wells MW-2 and MW-6 did not contain detectable concentrations of MTBE (<5 and <30  $\mu\text{g/L}$ , respectively).

## INTRINSIC BIOREMEDIATION STUDY RESULTS

The results of microbial enumeration and inorganic chemical analyses performed during the third quarter 1995 are summarized in Table 4. Plots of select bioremediation parameters versus radial distance from the central portion of the groundwater plume (MW-3) suggest that intrinsic biodegradation is occurring at the site. Figure 3 contains plots of TPHG concentration and TPHG-utilizing bacteria versus distance from monitoring well MW-3. Consistent with intrinsic bioremediation processes, this graph indicates a direct relationship between the concentrations of TPHG and TPHG-utilizing bacteria. Figure 4 contains plots of field dissolved-oxygen, laboratory redox potential, and TPHG-utilizing bacteria versus distance from monitoring well MW-3. Consistent with intrinsic bioremediation processes, this graph shows an inverse relationship between TPHG-utilizing bacteria and dissolved-oxygen, and an inverse relationship between TPHG-utilizing bacteria and redox potential. As requested by the ACHCSA in its letter

dated June 1, 1995, bacterial enumeration and other related inorganic analyses will be collected annually to monitor changes in intrinsic bioremediation parameters.

## LIMITATIONS

No monitoring event is thorough enough to describe all geologic and hydrogeologic conditions of interest at a given site. If conditions have not been identified during the monitoring event, such a finding should not therefore be construed as a guarantee of the absence of such conditions at the site, but rather as the result of the scope, limitations, and cost of work performed during the monitoring event.

## SITE STATUS UPDATE

This update reports the site activities performed during the third quarter of 1995 and those anticipated for the fourth quarter of 1995.

### Third Quarter 1995 Activities

- Prepared and submitted quarterly groundwater monitoring report for second quarter 1995.
- Performed quarterly groundwater monitoring for third quarter 1995.
- Installed off-site monitoring wells MW-9 and MW-10.
- As requested by ACHCSA in a letter dated June 1, 1995, collected additional groundwater samples to monitor intrinsic biodegradation.

### Work Anticipated for Fourth Quarter 1995

- Prepare and submit quarterly groundwater monitoring report for third quarter 1995.
- Perform quarterly groundwater monitoring for fourth quarter 1995.

Mr. Michael Whelan

**APPENDIX B**

**ANALYTICAL RESULTS AND CHAIN-OF-CUSTODY  
DOCUMENTATION, THIRD QUARTER 1995**

October 6, 1995

Service Request No: S951180

John Young  
EMCON  
1921 Ringwood Avenue  
San Jose, CA 95131

Re: 0805-130.03 / TO# 17075.00 / 2185 Oakland

Dear Mr. Young:

The following pages contain analytical results for sample(s) received by the laboratory on September 21, 1995. Results of sample analyses are followed by Appendix A which contains sample custody documentation and quality assurance deliverables requested for this project. The work requested has been assigned the Service Request No. listed above -to help expedite our service please refer to this number when contacting the laboratory.

Analytical results were produced by procedures consistent with Columbia Analytical Services' (CAS) Quality Assurance Manual (with any deviations noted). Signature of this CAS Analytical Report below confirms that pages 2 through 17, following, have been thoroughly reviewed and approved for release in accord with CAS Standard Operating Procedure ADM-DatRev3.

Please feel welcome to contact me should you have questions or further needs.

Sincerely:

Steven L. Green  
Project Chemist

SLG/ajb

  
Annelise J. Bazar

DMS	Duplicate Matrix Spike
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
IC	Ion Chromatography
ICB	Initial Calibration Blank sample
ICP	Inductively Coupled Plasma atomic emission spectrometry
ICV	Initial Calibration Verification sample
J	Estimated concentration. The value is less than the MRL, but greater than or equal to the MDL. If the value is equal to the MRL, the result is actually <MRL before rounding.
LCS	Laboratory Control Sample
LUFT	Leaking Underground Fuel Tank
M	Modified
MBAS	Methylene Blue Active Substances
MCL	Maximum Contaminant Level. The highest permissible concentration of a substance allowed in drinking water as established by the U. S. EPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
MS	Matrix Spike
MTBE	Methyl tert-Butyl Ether
NA	Not Applicable
NAN	Not Analyzed
NC	Not Calculated
NCASI	National Council of the paper industry for Air and Stream Improvement
ND	Not Detected at or above the method reporting/detection limit (MRL/MDL)
NIOSH	National Institute for Occupational Safety and Health
NTU	Nephelometric Turbidity Units
ppb	Parts Per Billion
ppm	Parts Per Million
PQL	Practical Quantitation Limit
QA/QC	Quality Assurance/Quality Control
RCRA	Resource Conservation and Recovery Act
RPD	Relative Percent Difference
SIM	Selected Ion Monitoring
SM	Standard Methods for the Examination of Water and Wastewater, 18th Ed., 1992
STLC	Solubility Threshold Limit Concentration
SW	Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, 3rd Ed., 1986 and as amended by Updates I, II, IIA, and IIB.
TCLP	Toxicity Characteristic Leaching Procedure
TDS	Total Dissolved Solids
TPH	Total Petroleum Hydrocarbons
tr	Trace level. The concentration of an analyte that is less than the PQL but greater than or equal to the MDL. If the value is equal to the PQL, the result is actually <PQL before rounding.
TRPH	Total Recoverable Petroleum Hydrocarbons
TSS	Total Suspended Solids
TTLC	Total Threshold Limit Concentration
VOA	Volatile Organic Analyte(s)

Re: 0805-130.03 / TO# 17075.00 / Oakland 2185

Dear Mr. Young:

The following pages contain analytical results for sample(s) received by the laboratory on September 21, 1995. Results of sample analyses are followed by Appendix A which contains sample custody documentation and quality assurance deliverables requested for this project. The work requested has been assigned the Service Request No. listed above -to help expedite our service please refer to this number when contacting the laboratory.

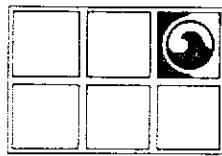

Please feel welcome to contact me should you have questions or further needs.

Sincerely:

Steven L. Green  
Project Chemist

Subject: Bacteria Enumeration Test Results  
Facility #: 2185

Dear Ms. Brown:

Enclosed please find the test results for the sample(s) received by the Remediation Technology Laboratory on 9/22/95.

Analytical work for this project has undergone a rigorous Quality Assurance/Quality Control procedure to ensure quality and accuracy. Your reference number for correspondence regarding these results is R7301.

If you have any questions regarding this analysis, or if we can be of further assistance, please feel free to call us.

Sincerely,  
Groundwater Technology, Inc.

David Cacciatore  
Project Manager

7301-6	MW-3 (23')	4.2 X 10 <sup>2</sup>

Plate counts reported in colony-forming units per mL of water. Spread plate technique based on Methods of Soil Analysis, Part 2, Chemical and Microbiological Properties, Amer. Soc. of Agronomy, Soil Science Soc. of Amer., 1982, Madison, WI chapter 37; Standard Methods for the Examination of Water and Wastes, 17th edition, AWWA, APHA, WPCF, 1989, Method 9215C. Results in parentheses do not fall within the range of 30-300 colonies per plate and are therefore reported as estimated counts.
