Re: **Chevron Service Station #9-0076**
4265 Foothill Blvd.
Oakland, California

Dear Mr. Chan:

Enclosed is the Second Quarter Groundwater Monitoring Report for 1997, that was prepared by our consultant Blaine Tech Services Inc. for the above noted site. Ground water samples were collected and analyzed for TPH-g, BTEX and MtBE constituents.

No separate phase hydrocarbons (SPH) was detected in monitoring well C-2 in this sampling event. The concentration of the benzene constituent decreased in monitoring wells C-1, C-4 and C-7, but increased slightly in wells C-2 and C-6, while remaining the same in well C-3. Monitoring wells C-5 and C-8 were below method detection limits for all constituents. Monitoring well C-9, which was installed downgradient of well C-7, shows concentrations of all constituents below method detection levels.

Depth to ground water varied from 15.16 feet to 28.81 feet below grade with a direction of flow southwesterly.

For your information, this station will undergo construction starting on July 14, 1997. This construction activity will include the replacement of the product piping, and will provide overspill protection at the dispensers and at the underground storage tank fills. The construction activity is expected to take 30 to 45 days for completion.

Chevron requests that monitoring wells C-5, C-8 and C-9 be changed to annually monitoring with the remaining wells continued to be monitored quarterly at this time. Well C-9 has been method detection limits for all constituents for the last five sampling events while wells C-5 and C-8 have been below method detection limits for the TPH-g and BTEX constituents for the last 15 sampling events. If you have any questions, call me at (510) 842-9136.

Sincerely,
CHEVRON PRODUCTS COMPANY

Monitoring Performed on June 11, 1997

Groundwater Sampling Report 970611-S-1

This report covers the routine quarterly monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to McKittrick Waste Treatment Site for disposal.

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of WELL DATA AND ANALYTICAL RESULTS. The full analytical report for the most recent samples is located in the Analytical Appendix. The table

also contains new groundwater elevation calculations taken from the computer plotted gradient map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

Note: Blaine Tech Services, Inc. began routine monitoring of the groundwater wells at this site on November 1, 1994.

Earlier field data and analytical results are drawn from the September 27, 1994 Groundwater Technology, Inc. report.

ABBREVIATIONS:

TPH = Total Petroleum Hydrocarbons

MTBE = Methyl t-Butyl Ether

ND = Not detected at or above the minimum quantitation limit. See laboratory reports for minimum quantitation limits.

LCS	70-130	70-130	70-130	70-130	70-130
Control Limits					

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
