Subject: Case Closure for Fuel Leak Case RO0000474 and Geotracker Global ID T0600101801,
Merritt Tire Sale, 3430 Castro Valley Boulevard, Castro Valley, California

Dear Ladies and Gentlemen:

This letter transmits the enclosed underground storage tank (UST) case closure letter in accordance with Chapter 6.75 (Article 4, Section 25296.10[g]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, the Alameda County Department of Environmental Health (ACDEH) is required to use this case closure letter for all UST leak sites. We are also transmitting to you the enclosed case closure summary. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed. This case closure letter and the case closure summary can also be viewed on the State Water Resources Control Board's Geotracker website (<http://geotracker.waterboards.ca.gov>) and the Alameda County Department of Environmental Health website (<http://www.acgov.org/aceh/index.htm>).

Due to residual contamination, the site was closed with Site Management Requirements that require notifying ACDEH of a change in land use to any residential, or conservative land use, or if any redevelopment occurs and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities. Site Management Requirements are further described in the *Additional Information* Section of the attached Case Closure Summary. If you have any questions, please call Karel Detterman at (510) 567-6708. Thank you.

Sincerely,

A handwritten signature in black ink, appearing to read "Dilan Roe".

Dilan Roe, P.E.

Subject: Case Closure for Fuel Leak Case RO0000474 and Geotracker Global ID T0600101801, Merritt
Tire Sale, 3430 Castro Valley Boulevard, Castro Valley, California

Dear Responsible Parties:

This letter confirms the completion of a site investigation and remedial action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact our office if you have any questions regarding this matter.

Sincerely,

Ronald Browder
Director

Tank Information

Tank No.	Size (gal)	Contents	Closed in-Place / Removed	Date
---	550 gallon	Waste Oil	Removed	Prior to September 22, 1993

Site History

Current Land-use at time of Case Closure: The subject property (APN 84A-80-19-3) is located in the center of Castro Valley at 3430 Castro Valley Boulevard in a commercial area of Castro Valley, approximately 500 feet northwest of the intersection of Castro Valley Boulevard and Redwood Road. At the time of this case closure, Certified Tire and Service Centers Goodyear is operating a Tire and Automotive Service business, and accordingly this case is closed to the current commercial land-use risk scenario, consisting of a commercial structure developed at the site. Due to residual contamination, the site was closed with site management requirements that include notifying Alameda County Department of Environmental Health (ACDEH) of a proposed change in land use to any residential or conservative land use, or if any redevelopment or building alteration is proposed that affect or disturb the existing subsurface conditions at the site.

Underground Storage Tank Case Closure Summary Form

Site History (continued)

Adjacent Property(ies) Land-use at Time of Case Closure: The subject property is surrounded to the west, north, and east by commercial businesses, to the south by Castro Valley Boulevard, and on the south side of Castro Valley Boulevard, additional businesses. At the time of this case closure, no potential off-site contamination was identified. However, should off-site redevelopment occur, ACDEH recommends evaluating the redevelopment site(s) for chemicals of concern identified on this site.

Historic Land-use/Site Investigation: The site has historically operated as a tire and automotive service business. A 550-gallon used oil underground storage tank (UST) was removed prior to 1993. In September 1993, borings were installed to assess subsurface conditions in the former waste oil UST vicinity. Elevated concentrations of petroleum hydrocarbons were detected in soil. In November 1993, monitoring wells were installed to assess groundwater conditions. Free product has been detected at the site since 1994. In March 1997, an Expanded Assessment and Risk-Based Corrective Action (RBCA) evaluation was performed at the site.

On December 1, 2004, an environmental site assessment and limited subsurface investigation was performed at the site. A 385 gallon sand and grease interceptor was discovered at the site. In August 2012, a remedial excavation to remove contaminated soil was completed. On August 14, 2012 an additional monitoring well MW-5 was installed to monitor post-remediation groundwater conditions down-gradient of the remedial excavation. Non-aqueous phase liquid (NAPL) or free product was not present during corrective action excavation activities and was subsequently not detected in the downgradient replacement well MW-5.

A preferential pathway evaluation and a sensitive receptor survey was performed prior to case closure. The depth of the utilities at the site were documented at up to 4 feet below the ground surface (bgs). The depth of first encountered groundwater averages between 5 to 8 feet bgs. Castro Valley Creek the closest surface water body is located 1,073 feet east of and cross gradient to the site at its closest point. The direction of groundwater flow in the area appears to be towards the south.

Potential Exposure to Chemicals of Concern: A 550-gallon used oil UST is believed to be the source of the contamination discovered and cleaned up at the site. The main chemicals of concern (COCs) associated with the used oil UST and detected at the site were total petroleum hydrocarbons (TPH) as oil & grease (o&g), TPH as diesel range organics (DRO), lead, benzene, methyl tert-butyl ether (MTBE), vinyl chloride, tetrachloroethene (PCE), trichloroethene (TCE), 1,1-Dichloroethene (1,1-DCE), 1,1-Dichloroethane (1,1-DCA), cis-1,2-DCE, and naphthalene. Inhalation and ingestion appear to be the most likely potential routes of exposure to these COCs.

Remediation Activities: A corrective action plan consisting of excavation of a rectangular area 60 feet by 15 feet by 8 feet deep in front of and surrounding the former waste oil UST was approved in 2009 and implemented in 2012. Confirmation soil sample analytical results indicated polyaromatic hydrocarbons (PAHs) remain in soil at 5 feet. The petroleum hydrocarbon plume does not appear to extend offsite as defined by well MW-4 located 90 feet south and down gradient of the former waste oil UST and immediately adjacent to the southern property line.

Underground Storage Tank Case Closure Summary Form

Site History (continued)

Case Closure & Future Site Management Requirements: This fuel leak case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP). The case meets all the general and media-specific criteria of the LTCP with the exception of media-specific criteria of vapor intrusion and direct contact to outdoor air. ACDEH made the determination that the site has a low risk of vapor intrusion due to the commercial land use and building configuration and construction with large roll up doors. ACDEH has made the determination that there is low potential for direct contact exposure because the entire site is paved and the site is in current commercial land use.

Due to residual contamination at the site, the site is closed as a commercial site with site management requirements and land use restrictions that limit the site to the current land use and building configuration. If there is a proposed change in land use to any residential, or conservative land use, or if any redevelopment occurs, ACDEH must be notified as required by Government Code Section 65850.2.2. ACDEH will re-evaluate the site relative to the proposed redevelopment. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities

Site Closure Evaluation Summary

This fuel leak case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP). The case meets all the general criteria of the LTCP but does not meet Direct Contact and Outdoor Air Specific Criteria. Alameda County Department of Environmental Health (ACDEH) has made the determination that there is low potential for direct contact exposure because of the current land use as a tire shop with open air service bays.

Refer to Attachments 1 through 5 for analysis details.

Site Management Requirements

Case closure is granted for the current commercial land use.

Due to residual subsurface contamination remaining at the site, if any redevelopment occurs, or if a change in land use to residential, or other conservative land use, Alameda County Department of Environmental Health (ACDEH) must be notified as required by Government Code Section 65850.2.

Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities.

Changed case status prematurely to case closed; awaiting upload to Geotracker and to ACDEH's ftp site of missing groundwater monitoring report containing laboratory data from the May 21, 2014 sampling event (and final sampling event).

SITE HISTORY

Not all historic documents for the fuel leak case may be available on Geotracker. A more complete historic case file for this site is located on the Alameda County Department of Environmental Health website at: <http://www.acgov.org/aceh/lop/ust.htm>

Current Land-use at time of Case Closure

The subject property (APN 84A-80-19-3) is located in the center of Castro Valley at 3430 Castro Valley Boulevard in a commercial area of Castro Valley, approximately 500 feet northwest of the intersection of Castro Valley Boulevard and Redwood Road. At the time of this case closure, Certified Tire and Service Centers Goodyear is operating a Tire and Automotive Service business, and accordingly this case is closed to the current commercial land-use risk scenario, consisting of a commercial structure developed at the site. Due to residual contamination, the site was closed with site management requirements that include notifying Alameda County Department of Environmental Health (ACDEH) of a proposed change in land use to any residential or conservative land use, or if any redevelopment or building alteration is proposed that affect or disturb the existing subsurface conditions at the site.

Adjacent Property(ies) Land-use at Time of Case Closure

The subject property is surrounded to the west, north, and east by commercial businesses, to the south by Castro Valley Boulevard, and on the south side of Castro Valley Boulevard, additional businesses. At the time of this case closure, no potential off-site contamination was identified. However, should off-site redevelopment occur, ACDEH recommends evaluating the redevelopment site(s) for chemicals of concern identified on this site.

Historic Land-use/Site Investigation

The site has historically operated as a tire and automotive service business. A 550-gallon used oil underground storage tank (UST) was removed prior to 1993. In September 1993, borings were installed to assess subsurface conditions in the former waste oil UST vicinity. Elevated concentrations of petroleum hydrocarbons were detected in soil. In November 1993, monitoring wells were installed to assess groundwater conditions. Free product has been detected at the site since 1994. In March 1997, an Expanded Assessment & RBCA evaluation was performed at the site. On December 1, 2004, an environmental site assessment and limited subsurface investigation was performed at the site. A 385 gallon sand and grease interceptor was discovered at the site. In August 2012, a remedial excavation to remove contaminated soil was completed. On August 14, 2012 an additional monitoring well MW-5 was installed to monitor post-remediation groundwater conditions down-gradient of the remedial excavation. Non-aqueous phase liquid (NAPL) or free product was not present during corrective action excavation activities and was subsequently not detected in the downgradient replacement well MW-5. A preferential pathway evaluation and a sensitive receptor survey was performed prior to case closure. The depth of the utilities at the site were documented at up to 4 feet below the ground surface (bgs). The depth of first encountered groundwater averages between 5 to 8 feet bgs. Castro Valley Creek the closest surface water body is located 1,073 feet east of and cross gradient to the site at its closest point. The direction of groundwater flow in the area appears to be towards the south.

Potential Exposure to Chemicals of Concern

A 550-gallon used oil UST is believed to be the source of the contamination discovered and cleaned up at the site. The main chemicals of concern (COCs) associated with the used oil UST and detected at the site were total petroleum hydrocarbons (TPH) as oil & grease (o&g), TPH as diesel range organics (DRO), lead, benzene, methyl tert-butyl ether (MTBE), vinyl chloride, tetrachloroethene (PCE), trichloroethene (TCE), 1,1-Dichloroethene (1,1-DCE), 1,1-Dichloroethane (1,1-DCA), cis-1,2-DCE, and naphthalene.

Inhalation and ingestion appear to be the most likely potential routes of exposure to these COCs.

Remediation Activities

A corrective action plan consisting of excavation of a rectangular area 60 feet by 15 feet by 8 feet deep in front of and surrounding the former waste oil UST was approved in 2009 and implemented in 2012. Confirmation soil sample analytical results indicated polycyclic aromatic hydrocarbons (PAHs) remain in soil at 5 feet. The petroleum hydrocarbon plume does not appear to extend offsite as defined by well MW-4 located 90 feet south and down gradient of the former waste oil UST and immediately adjacent to the southern property line.

Case Closure & Future Site Management Requirements

This fuel leak case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP). The case meets all the general and media-specific criteria of the LTCP with the exception of media-specific criteria of direct contact to outdoor air. ACDEH has made the determination that there is low potential for direct contact exposure because the entire site is paved and the site is in current commercial land use.

Due to residual contamination at the site, the site is closed as a commercial site with site management requirements. If there is a proposed change in land use to any residential, or conservative land use, or if any redevelopment occurs, ACDEH must be notified as required by Government Code Section 65850.2.2. ACDEH will re-evaluate the site relative to the proposed redevelopment. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities.

Not all historic documents for the fuel leak case may be available on Geotracker. A more complete historic case file for this site is located on the Alameda County Department of Environmental Health website at: <http://www.acgov.org/aceh/lop/ust.htm>

CHECKLIST INITIATED ON 7/30/2013

[CLOSURE POLICY HISTORY](#)

General Criteria - The site satisfies the policy general criteria - [CLEAR SECTION ANSWERS](#)

YES NO

a. Is the unauthorized release located within the service area of a public water system?

Name of Water System :

EBMUD

YES NO

b. The unauthorized release consists only of petroleum [\(info\)](#).

YES NO

c. The unauthorized ("primary") release from the UST system has been stopped.

YES NO

d. Free product has been removed to the maximum extent practicable [\(info\)](#).

FP Not Encountered YES NO

e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed [\(info\)](#).

YES NO

f. Secondary source has been removed to the extent practicable [\(info\)](#).

YES NO

g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.

Not Required YES NO

h. Does a nuisance exist, as defined by [Water Code section 13050](#).

YES NO

1. Media-Specific Criteria: Groundwater - The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below. - [CLEAR SECTION ANSWERS](#)

YES NO

EXEMPTION - Soil Only Case (Release has not Affected Groundwater - [Info](#))

YES NO

Does the site meet any of the Groundwater specific criteria scenarios?

YES NO

1.1 - The contaminant plume that exceeds water quality objectives is <100 feet in length. There is no free product. The nearest existing water supply well or surface water body is >250 feet from the defined plume boundary.

YES NO

2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c - [CLEAR SECTION ANSWERS](#)

YES NO

EXEMPTION - Active Commercial Petroleum Fueling Facility

YES NO

Does the site meet any of the Petroleum Vapor Intrusion to Indoor Air specific criteria scenarios?

YES NO

2c - Petroleum Vapor Intrusion to Indoor Air - As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, the regulatory agency determines that petroleum vapors migrating from soil or groundwater will have no significant risk of adversely affecting human health.

YES NO

3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below. - [CLEAR SECTION ANSWERS](#)

NO YES

EXEMPTION - The upper 10 feet of soil is free of petroleum contamination

YES NO

Does the site meet any of the Direct Contact and Outdoor Air Exposure criteria scenarios?

YES NO

ADDITIONAL QUESTIONS - Please indicate only those conditions that do not meet the policy criteria:

Exposure Type :

Residential Commercial Utility Worker

Petroleum Constituents in Soil :

≤ 5 Feet bgs > 5 Feet bgs and ≤ 10 Feet bgs Unknown

Soil Concentrations of Benzene :

> 1.9 mg/kg and ≤ 2.8 mg/kg > 2.8 mg/kg and ≤ 8.2 mg/kg > 8.2 mg/kg and ≤ 12 mg/kg > 12 mg/kg and ≤ 14 mg/kg > 14 mg/kg Unknown

Soil Concentrations of EthylBenzene :

> 21 mg/kg and ≤ 32 mg/kg > 32 mg/kg and ≤ 89 mg/kg > 89 mg/kg and ≤ 134 mg/kg > 134 mg/kg and ≤ 314 mg/kg > 314 mg/kg Unknown

Soil Concentrations of Naphthalene :

> 9.7 mg/kg and ≤ 45 mg/kg > 45 mg/kg and ≤ 219 mg/kg > 219 mg/kg Unknown

Soil Concentrations of PAH :

> 0.063 mg/kg and ≤ 0.68 mg/kg > 0.68 mg/kg and ≤ 4.5 mg/kg > 4.5 mg/kg Unknown

Area of Impacted Soil :

Area of Impacted Soil > 82 by 82 Feet Unknown

Additional Information

Should this case be closed in spite of NOT meeting policy criteria?

Explain:

Under the current commercial land use, the entire site is paved resulting in a low potential for direct contact exposure under the current land use.

YES NO

Has this LTCP Checklist been updated for FY 16/17?

YES NO

Underground Storage Tank Case Closure Summary Form

LTCP GROUNDWATER SPECIFIC CRITERIA - PETROLEUM						
Closure Scenario						
<input type="checkbox"/> Site has not affected groundwater; <input checked="" type="checkbox"/> Scenario 1; <input type="checkbox"/> Scenario 2; <input type="checkbox"/> Scenario 3; <input type="checkbox"/> Scenario 4; <input type="checkbox"/> Scenario 5; <input type="checkbox"/> This case should be closed in spite of not meeting the groundwater specific media criteria						
Shading indicates Site Specific Data and Bold Text indicates Evaluation Criteria						
Site Specific Data		Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5
Plume Length	< 100 feet	<100 feet	<250 feet	<1,000 feet	<1,000 feet	The site does not meet scenarios 1 through 4; however, a determination has been made that under current and reasonably expected future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame.
Free Product	No free product	No free product	No free product	Removed to maximum extent practicable	No free product	
Plume Stable or Decreasing	Decreasing	Stable or decreasing	Stable or decreasing	Stable or decreasing for minimum of 5 years	Stable or decreasing	
Distance to Nearest Water Supply Well (from plume boundary)	> 1,325 feet upgradient (DWR / ACPWA)	>250 feet	>1,000 feet	>1,000 feet	>1,000 feet	
Distance to Nearest Surface Water Body (from plume boundary)	Downgradient: None Cross Gradient: 1,073 feet east; Upgradient: None	>250 feet	>1,000 feet	>1,000 feet	>1,000 feet	
Benzene Concentrations ($\mu\text{g/l}$)	Historic Max: <2.0 Current Max: <0.5	No criteria	<3,000	<1,000	<1,000	
MTBE Concentrations ($\mu\text{g/l}$)	Historic Max: <0.5 Current Max: <0.5	No criteria	<1,000	<1,000	<1,000	
Property Owner Willing to Accept a Land Use Restriction	Not applicable	Not applicable	Not applicable	Yes	Not applicable	

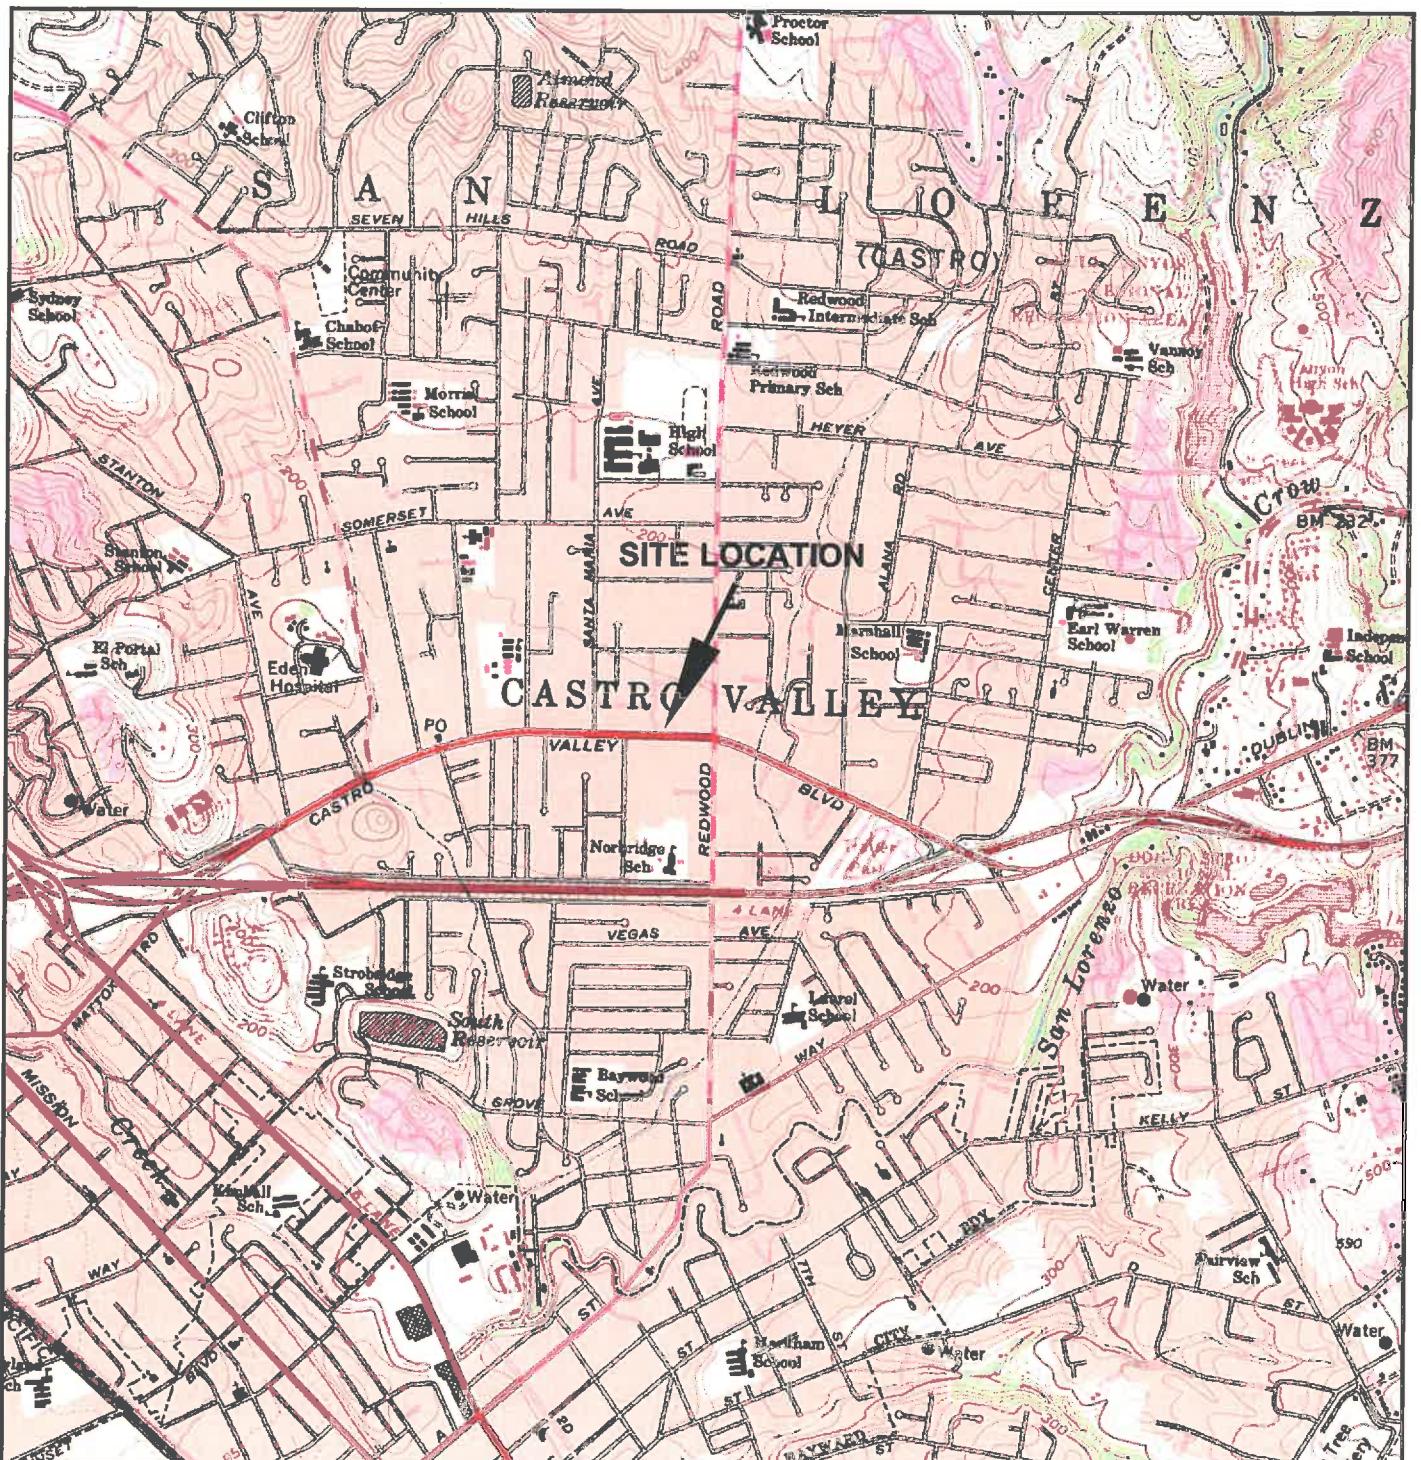

Notes: DWR = Department of Water Resources

ACPWA = Alameda County Public Works Agency

GAMA = Groundwater Ambient Monitoring Assessment (GeoTracker)

Attachment 3 – Groundwater Evaluation and Data

Analysis	
Plume Length	Defined to water quality objectives by well MW-4 located 90 feet south and downgradient of the former waste oil UST.
Free Product	Not observed at site.
Plume Stability	Plume is stable in aerial extent based on a number of years of monitoring, including recent concentration trends. (The contaminant mass has expanded to its maximum extent defined as the distance from the release where attenuation exceeds migration.)
Water Supply Wells	An Alameda County Public Works Agency (ACPWA) and the Department of Water Resources (DWR) well survey indicate no public water supply wells, irrigation wells within 1,320 feet of the site. The well survey results from the GeoTracker Groundwater Ambient Monitoring Assessment (GAMA) website indicates there are no public water supply wells, irrigation wells, California Department of Public Health wells, Department of Pesticide Regulation wells located within a 2,000 foot radius of the site.
Surface Water Bodies	The site is located 1,073 feet west and cross gradient of Castro Valley Creek.

Holes:

All groundwater concentrations measured in micrograms per liter (µg/L)

TPH-GRO = Total petroleum hydrocarbons as gasoline range organics; historically analyzed by EPA Method 8015B; beginning December 3, 2007 TPH analyzed by LUR/GC/MS 8260B

TPH-DRO = Total petroleum hydrocarbons as diesel range organics; analyzed by EPA Method 8015B/3510; beginning August 21, 2012 analyzed by 8015B with silica gel cleanup

HEM = Hexane extractable materials

Oil & Grease = also reported as HEM with silica gel cleanup (SGT-HEM) analyzed by EPA 1664A.

BTEx = benzene, toluene, ethylbenzene, and total xylenes; historically analyzed by EPA Method 8021B; beginning September 30, 2003 VOCs analyzed by EPA Method 8260B

MTBE = Methyl Ter-butyl Ester; historically analyzed by EPA Method 8021B; beginning September 30, 2003 volatile organic compounds analyzed by EPA Method 8260B

DEHP = Bis (2-ethylhexyl) phthalate

EDC = 1,2-Dichloroethane analyzed by EPA Method 8260B

EDB = Ethylene Dibromide analyzed by EPA Method 8260B

1,1-DCE = 1,1-Dichloroethene

1,1-DCA = 1,1-Dichloroacethane

cis 1,2-DCE = cis 1,2-Dichloroethene

TCE = Trichloroethene

PCE = Tetrachloroethene

1,1,1-TCE = 1,1,1-Trichloroethane

1,2,4-TMBZ = 1,2,4-Trimethylbenzene

Bold numbers denote concentration levels at or above laboratory reporting limits.

^t = Historical groundwater data as referenced in Secor groundwater monitoring report dated 4/26/05.

NA = Not Analyzed

NS = Not Sampled

ND = Not Detected - as reported in EMCON's Expanded Assessment, and Risk-Based Corrective Action Evaluation report, dated March 4, 1997

FP = Free product, well not sampled

L = Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptable limits. Analyte not detected, data not impacted.

* = Due to the laboratory exceeding the hold time for 8260B analysis, MW-1 and MW-2 were resampled on 6/15/06.

** = Groundwater Monitoring Well MW-3 was destroyed September 10, 2009.

^j = Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.

< = Concentration is below method detection limit (MDL) or laboratory reporting limit (RL) when MDL is not presented (see analytical reports for details).

Attachment 4 – Vapor Intrusion Evaluation and Data

LTCP VAPOR SPECIFIC CRITERIA – PETROLEUM (cont.)	
Vapor Intrusion to Indoor Air Analysis	
Onsite	The unsaturated zone at the site is greater than 5 feet thick. However, significant residual TPHd and TPHg remains in soil from depths as shallow at 6.5 feet below ground surface (bgs). Concentrations of naphthalene are present in soil at 1.6 milligrams per kilogram (mg/kg) in EX-8 at a depth of approximately 5 feet bgs and in EX-10 at 2.3 mg/kg at 5 feet bgs. There appears to be no detectable benzene, ethylbenzene, or naphthalene impacts in groundwater at acceptable laboratory detection limits. ACDEH has determined that the vapor intrusion risk at the site appears to be low due to the commercial site usage as a tire shop with open air service bays and land use restrictions that limit the site to the current land use and building configuration.
Offsite	The petroleum hydrocarbon plume does not extend offsite as defined by well MW-4 located 90 feet south and downgradient of the former waste oil UST and immediately adjacent to the southern property line. Therefore ACDEH has concluded that there is not an offsite vapor intrusion risk.

Attachment 5 – Direct Contact Evaluation and Data

LTCP DIRECT CONTACT AND OUTDOOR AIR EXPSURE CRITERIA						
Closure Scenario						
<p><u> </u> Exemption (no petroleum hydrocarbons in upper 10 feet), <u> </u> Maximum concentrations of petroleum hydrocarbons are less than or equal to those in Table 1 below, <u> </u> Site-specific risk assessment, <u> </u> A determination has been made that the concentrations of petroleum in soil will have no significant risk of adversely affecting human health, <u>X</u> A determination has been made that the concentrations of petroleum in soil will have no significant risk of adversely affecting human health as a result of controlling exposure through the use of mitigation measures or through the use of institutional controls, <u> </u> This case should be closed in spite of not meeting the direct contact and outdoor air specific media criteria.</p>						
Shading indicates Site Specific Data that meets the Evaluation Criteria and Bold Text indicates Evaluation Criteria						
Are maximum concentrations less than those in Table 1 below?		No				
Constituent		Residential		Commercial/Industrial		Utility Worker
		0 to 5 feet bgs (mg/kg)	Volatilization to outdoor air (5 to 10 feet bgs) mg/kg	0 to 5 feet bgs (mg/kg)	Volatilization to outdoor air (5 to 10 feet bgs) mg/kg	0 to 10 feet bgs (mg/kg)
Site Maximum	Benzene	0.12	0.051	0.12	0.051	0.12
LTCP Criteria	Benzene	≤1.9	≤2.8	≤8.2	≤12	≤14
Site Maximum	Ethylbenzene	0.27	0.32	0.27	0.32	0.32
LTCP Criteria	Ethylbenzene	≤21	≤32	≤89	≤134	≤314
Site Maximum	Naphthalene	1.6	2.3	1.6	2.3	2.3
LTCP Criteria	Naphthalene	≤9.7	≤9.7	≤45	≤45	≤219
Site Maximum	PAHs	3.52	<0.629	3.52	----	3.52
LTCP Criteria	PAHs	≤0.063	NA	≤0.68	NA	≤4.5
Direct Contact and Outdoor Air Analysis						
Onsite		<p>Concentrations of Polycyclic Aromatic Hydrocarbons (PAHs) exceeding the benzo(a)pyrene toxicity equivalent (BaPe) of 3.52 mg/kg are present in soil at a depth of 5 feet bgs in EX-5 located adjacent to the service bay 8. Under the current land use scenario (commercial), the subject site does not meet the commercial/industrial criteria for Direct Contact and Outdoor Air, for Utility Worker, or for residential land use criteria. However, under the current land use, the entire site is paved resulting in a low potential for direct contact exposure under the current land use. Due to residual contamination at the site, the site is closed as a commercial site with site management requirements and land use restrictions that limit the site to the current land use and building configuration. If there is a proposed change in land use to any residential, or conservative land use, or if any redevelopment occurs, Alameda County Department of Environmental Health (ACDEH) must be notified as required by Government Code Section 65850.2.2. ACDEH will re-evaluate the site relative to the proposed redevelopment. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities.</p>				

Attachment 5 – Direct Contact Evaluation and Data

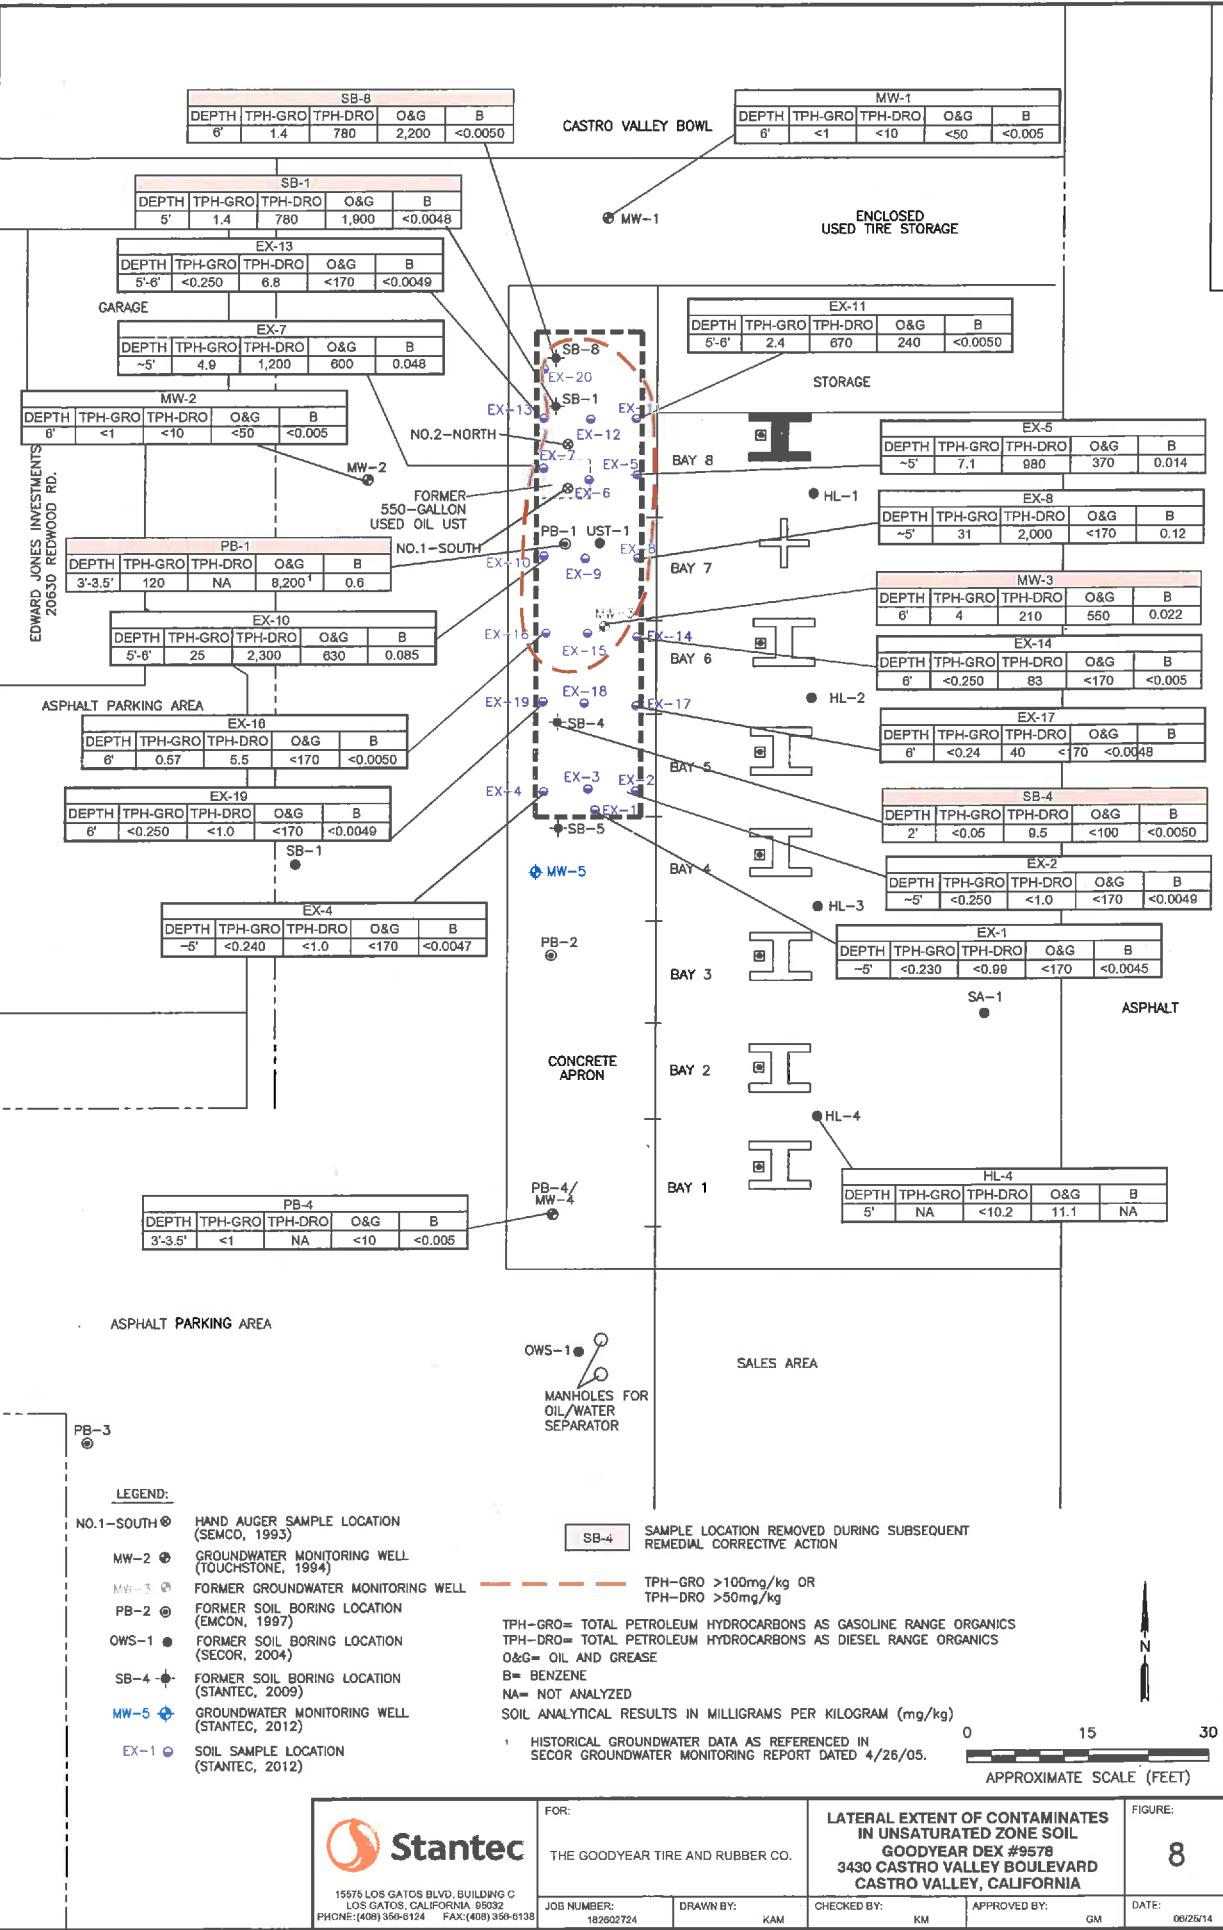

Offsite	<p>Based on site analytical data, petroleum hydrocarbon impacts from the waste oil UST at this case are not expected to be found offsite because the former waste oil UST had been centrally located at the site and a corrective action plan consisting of excavation of a rectangular area 60 feet by 15 feet by 8 feet deep surrounding the former waste oil UST was implemented in 2012. ACDEH has determined that under the current land use, the site is paved resulting in a low potential for direct contact exposure under the current land use. Due to Site Management Requirements, excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during future excavation and construction activities.</p>

NA = Not Analyzed

16.0 RE-EXCAVATING AND RE-SAMPLING

Since the analytical results from the excavation pit sample was less than the action levels, no additional sampling was needed.

17.0 BACKFILLING

Clean backfill was placed in the excavation. The fill was compacted with a hydraulic compactor. After the fill was compacted to subgrade, the area was resurfaced to match existing.

18.0 DISPOSAL

18.1 EXCAVATED SOIL

A total of 16.6 tons of soil were off hauled to a soil recycler. The name and address of the recycler was:

REMCO
2717 Goodrick Avenue
Richmond, California 94801

The name and address of the transporter was:

Rich Hamilton Trucking.
1336 Pauline Avenue

TABLE 1

RESULTS OF ANALYSES
SUPERIOR ANALYTICAL REPORT, SEPTEMBER 29, 1993

Laboratory No.	No. 1 - South	No. 2 - North
Gasoline	230	22
Benzene	0.88	0.099
Toluene	7.6	0.88
Ethylbenzene	3.6	0.34
Total Xylenes	24	2.4
Diesel Range	2,400	388
Oil & Grease	6,100	1,600

Note: All concentrations are in mg/Kg (or ppm)

Based on the initial sampling conducted by SEMCO, the Alameda County Department of Environmental Health requested that a preliminary investigation be conducted to determine the extent of potential contamination. Since the time of SEMCO's report in late 1993, there have been efforts between Goodyear Tire & Rubber and the Department of Environmental Health to determine the responsible party or parties. Although it is our understanding that this matter has not been resolved, Goodyear Tire & Rubber is proceeding with the investigation in accordance with the County's letter dated July 7, 1994. The work described in this report has been conducted in accordance with that letter and with our previously stated Work Plan of August 1994.

Site History

Little direct information is known about the site history and operations because the operators of Merritt Tire & Brake have not been available to be interviewed. Records regarding their operations are not available to

TABLE 1
Historical Soil Analytical Results
Former Merritt Tire Sales / Goodyear DEX #9578

The federal Petroleum Leaking Underground Storage Tank Trust Fund (Federal Trust Fund) provides funding to pay the local and state agency administrative and oversight costs associated with the cleanup of releases from underground storage tanks. The legislature has authorized funds to pay the local and state agency administrative and oversight costs associated with the cleanup of releases from underground storage tanks. The direct and indirect costs of site investigation or remedial action at the above site are funded, in whole or in part, from the Federal Trust Fund. The above individual(s) or entity(ies) have been identified as the party or parties responsible for investigation and cleanup of the above site. YOU ARE HEREBY NOTIFIED that pursuant to Title 42 of the United States Code, Section 6991b(h)(6) and Sections 25297.1 and 25360 of the California Health and Safety Code, the above Responsible Party or Parties must reimburse the State Water Resources Control Board not more than 150 percent of the total amount of site specific oversight costs actually incurred while overseeing the cleanup of the above underground storage tank site, and the above Responsible Party or Parties must make full payment of such costs within 30 days of receipt of a detailed invoice from the State Water Resources Control Board.

Please contact Scott SEERY, Hazardous Materials Specialist at this office if you have any questions concerning this matter.

INVITATION TO COMMENT – POTENTIAL CASE CLOSURE

MERRITT TIRE SALE
3430 CASTRO VALLEY BOULEVARD
CASTRO VALLEY, CALIFORNIA
FUEL LEAK CASE RO0000474
GEOTRACKER GLOBAL ID T0600101801

July 9, 2015

The above referenced site is a fuel leak case that is under the regulatory oversight of the Alameda County Environmental Health (ACEH) Local Oversight Program for the investigation and cleanup of a release of petroleum hydrocarbons from an underground storage tank system. Site investigation and cleanup activities have been completed and the site has been evaluated in accordance with the State Water Resources Control Board Low-Threat Closure Policy. The site appears to meet all of the criteria in the Low-Threat Closure Policy. Therefore, ACEH is considering closure of the fuel leak case. Due to the residual contamination on site, the site would be closed with site management requirements that require further evaluation if the site is to be redeveloped in the future.

The public is invited to review and comment on the potential closure of the fuel leak case. This notice is being sent to the current occupants and landowners of the site and adjacent properties and other known interested parties. The entire case file can be viewed over the Internet on the ACEH website (<http://www.acgov.org/aceh/lop/ust.htm>) or the State of California Water Resources Control Board GeoTracker website (<http://geotracker.waterboards.ca.gov>). Please send written comments to Karel Detterman at the address below; all comments will be forwarded to the responsible parties. **Comments received by September 15, 2015** will be considered and responded to prior to a final determination on the proposed case closure.

If you have comments or questions regarding this site, please contact the ACEH caseworker, Karel Detterman at 510-567-6708 or by email at karel.detterman@acgov.org. Please refer to ACEH case RO0000474 in any correspondence.
