Attention: Mr. Joe Smerglia

Re: GROUNDWATER MONITORING AND SAMPLING REPORT
Goodyear Service Center No. 9578
3430 Castro Valley Boulevard
Castro Valley, California

Mr. Smerglia:

This letter report summarizes the recent groundwater monitoring and sampling of monitoring wells at the above referenced address. Monitoring and sampling was performed on October 23, 1995, by DEL-TECH Services of Oakdale, California.

Monitoring wells MW-1, MW-2, and MW-3 are all two-inch diameter with total depths of 18.88, 18.27, and 16.28 feet below ground surface (bgs), respectively. Depth to groundwater was measured in wells MW-1 and MW-2 at 6.40 and 6.02, respectively. Depth to water could not be measured in Well MW-3 due the presence of a viscous fluid which prevented the Keck Product Interface Meter from measuring the thickness of the floating product and depth to water. The actual purge volumes were 6.0 gallons for Wells MW-1 and MW-2. During the purging process, pH, conductivity, and temperature measurements were recorded several times on the field logs. When these field measurements stabilized, groundwater samples were collected using a stainless steel bailer. Field measurements and pertinent sampling data are summarized in Table A and included on the field logs presented in Appendix A.

Formation groundwater from Wells MW-1 and MW-2 were decanted from the submersible pump into six (6), laboratory-supplied, 40-milliliter VOA bottles, one, one-liter amber glass and one, one-liter plastic bottles. The sample bottles were labeled, entered onto a chain-of-custody form, placed in a cooler with blue ice and delivered to Sequoia Analytical located in Redwood City, California.

As requested by Mr. Scott Seery of Alameda County Health Services Agency, analyses of the groundwater samples included: Total Petroleum Hydrocarbons calculated as Gasoline according to EPA Method 8015 (Modified), Benzene, Toluene, Ethylbenzene, and Xylenes according EPA Method 8020, Total Petroleum Hydrocarbons calculated as Diesel according to EPA Method 8015 (Modified), Volatile Organic Compounds (VOCs) according to EPA Method 8010, and Semivolatile Organics according to EPA SW-846 Method 8270. The DEL TECH Sampling Groundwater Field Monitoring Summary Report is presented in Appendix A. The chemical analytical results are summarized on Table B and the Sequoia Analytical laboratory report and Chain-of-Custody form are presented in Appendix B. A historical groundwater analytical summary for the three wells at the site is included in Table C.

The groundwater flow direction could not be determined because a water level measurement could not be recorded from Well MW-3. Based on historical water level measurements, the groundwater flow direction at the site is to the south southwest.

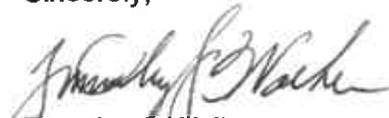

The XSORB™ sock placed in Well MW-3 for removing separate-phase floating product was monitored and removed twice in November as part of our fourth quarterly monitoring program. The sock was fully saturated with separate-phase product both times in November. In December, the sock was checked and no separate-phase product was observed in the well. The sock was replaced and will be checked during the next quarterly sampling event. The next quarterly sampling event is scheduled for January, 1996. As requested in the Alameda County Health Services Agency letter dated August 17, 1995, target compounds for future samplings will continue to be:

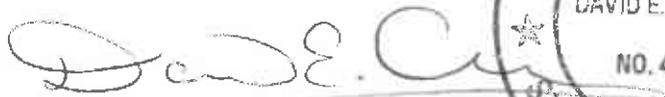

- o Total Petroleum Hydrocarbons calculated as gasoline and Diesel
- o Benzene, Toluene, Ethylbenzene, and Total Xylenes (BTEX)
- o Halogenated volatile organic compounds (HVOC)
- o Semivolatile organic compounds (SVOC)

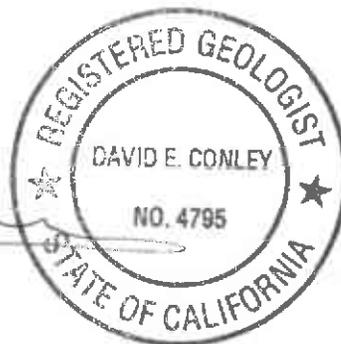

If, after receipt of the first quarterly monitoring and sampling of 1996, analytical results indicate that wells MW-1 and MW-2 continue to be reported as ND for TPH-Gasoline, BTEX, and HVOCs and SVOCs (EPA Methods 8010 and 8270), Touchstone proposes that, at a minimum, analyses for these two wells be continued on a semi-annual basis. If after the five consecutive samplings the analytical results are ND for the analytes just mentioned, the wells could be judged as not needed and then be properly destroyed or abandoned. There will be no change in the sampling and monitoring frequency for Well MW-3. It will continued to be sampled and monitored on a quarterly basis until analytical results requested by Alameda County are ND for two consecutive quarters.

If you have any questions or comments, please call me at (707) 935-0601.

Sincerely,

Timothy J. Walker
Project Manager

Sequoia Project ID: 5101002

Enclosed are the analytical results for samples received by Sequoia Analytical on October 25, 1995. The following table lists Sequoia's sample number with your corresponding sample identification.

Sequoia Sample #	Client sample Identification	Date Sampled	Analysis Requested
5101002	Water, MW-1	10/24/95	TPH Gas/BTEX TPH Diesel EPA 3510/8270 EPA 5030/8010
5101003	Water, MW-2	10/24/95	TPH Gas/BTEX TPH Diesel EPA 3510/8270 EPA 5030/8010

Sequoia will maintain custody of these samples for six weeks from date of receipt. At that time, samples will be disposed according to Sequoia's waste protocol. If you need to make other arrangements for these samples, please notify Sequoia prior to that time.

We would like to take this opportunity to thank you for choosing Sequoia Analytical for your project needs. If you have any questions regarding this project or any other analytical needs, please contact me at (916) 921-9600.

Sincerely,

SEQUOIA ANALYTICAL

Received: Oct 25, 1995
Reported: Nov 6, 1995

TOTAL EXTRACTABLE PETROLEUM HYDROCARBONS

Analyte	Reporting Limit µg/L	Sample I.D. 510-1002 MW-1	Sample I.D. 510-1003 MW-2
Extractable Hydrocarbons	50	N.D.	N.D.

Chromatogram Pattern: -- --

Quality Control Data

Report Limit Multiplication Factor:	1.0	1.0
Date Extracted:	10/26/95	10/26/95
Date Analyzed:	10/26/95	10/26/95
Instrument Identification:	GCHP-3B	GCHP-3B

Extractable Hydrocarbons are quantitated against a fresh diesel standard.
Analytes reported as N.D. were not detected at or above the reporting limit.

Please Note:

The LCS is a control sample of known, interferent free matrix that is analyzed using the same reagents, preparation and analytical methods employed for the samples. The LCS % recovery data is used for validation of sample batch results. Due to matrix effects, the QC limits for MS/MSD's are advisory only and are not used to accept or reject batch results.

Please Note:
The LCS is a control sample of known, interferent free matrix that is analyzed using the same reagents, preparation and analytical methods employed for the samples. The LCS % recovery data is used for validation of sample batch results. Due to matrix effects, the QC limits for MS/MSD's are advisory only and are not used to accept or reject batch results.

Touchstone Developments
17170 Keaton Ave.
Sonoma, CA 95476
Attention: Tim Walker

Client Project ID: Goodyear
Matrix: Water

QC Sample Group 5101002-3

Reported: Nov 6, 1995
