Alameda, CA 94502

Dear Ms. Detterman:

Attached for your review is the Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report (Reports) for the Goodyear DEX #9578, 3430 Castro Valley Boulevard, Castro Valley, California. The Reports were prepared for The Goodyear Tire & Rubber Company by Stantec Consulting Corporation. I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct, to the best of my knowledge.

If you have any questions, please don't hesitate to contact Stantec Project Manager Jack Hardin at 408-356-6124 extension 230.

Very truly yours,

Steven C. Bordenkircher
Senior Legal Counsel

Castro Valley, California
Alameda County Environmental Health RO#0000474**

INTRODUCTION

Stantec Consulting Services Inc. (Stantec) has completed the remedial activities described in the *Revised Work Plan for Implementation of Corrective Action Work Plan, Replacement of a Groundwater Monitoring Well, and Continuation of Semi-Annual Groundwater Monitoring*, dated July 25, 2012, (the Revised Work Plan) for the above-referenced site (the Site, see Figure 1).

The Revised Work Plan was developed in response to the Alameda County Environmental Health (ACEH) June 18, 2009 letter, *Corrective Action Plan Approval for Leak Case No. RO0000474 and GeoTracker Global ID T0600101801, Merritt Tire Sale, 3430 Castro Valley Boulevard, Castro Valley, CA 94546* (CAP, see Attachment A), approving the *Corrective Action Work Plan, Goodyear DEX #9578, 3430 Castro Valley Boulevard, Castro Valley, California*, Stantec, May 14, 2009 (Stantec, 2009). The approval letter requested the addition of the following items:

- a) Confirmation Soil Sampling – ACEH requested that implementation of the proposed alternative include collection of soil samples from the base of the excavation.
- b) Cleanup Levels, Cleanup Goals, & Water Quality Objectives – ACEH requested that the final Corrective Action Plan include a discussion providing justification that the proposed cleanup levels will achieve water quality objectives of the *Water Quality Control Plan for the San Francisco Basin* (Basin Plan) within a reasonable amount of time.
- c) Groundwater Contaminant Plume Monitoring – ACEH recommends semi-annual groundwater monitoring be conducted during the first and third quarters of the year.

Completion of four direct-push soil borings (SB-1, SB-4, SB-5, and SB-8), specified in the May 14, 2009 *Corrective Action Plan* was accomplished in September 2009 and reported to ACEH in the *Project Status – Implementation of Corrective Action Work Plan, Goodyear DEX #9578, 3430 Castro Valley Boulevard, Castro Valley, California*, prepared by Stantec on January 27, 2010. Monitoring Well 3 (MW-3) was destroyed under this same scope of work in preparation for implementation of the Revised Work Plan.

ACEH-requested additions to the May 14, 2009 CAP were incorporated into the Revised Work Plan, resulting in accomplishment of the following tasks, which complete all activities identified in both ACEH's May 14, 2009 CAP approval letter, and Stantec's July 25, 2012 project status report:

Reference: Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report

- Soil excavation,
- Confirmation sampling,
- Application of oxygen-releasing compound (ORC) amendment,
- Groundwater monitoring well installation and development, and
- Semi-annual groundwater monitoring and sampling.

This report is submitted within 45 days after receipt of the semi-annual groundwater monitoring event analytical results as indicated in the Revised Work Plan.

SITE BACKGROUND**Soil Data Summary**

Prior to 1993, a 550-gallon used oil underground storage tank (UST) was removed from the Site, the location of which is shown, along with previous soil borings and groundwater monitoring well locations, on Figure 2, Site Plan. In September 1993, two soil borings (No.1-South and No.2-North) were hand augered to 8 feet below ground surface (bgs) in proximity to the former UST. Soil samples from each borehole were submitted to Superior Analytical Laboratory (Superior Analytical) in Martinez, California for laboratory analysis of Total Petroleum Hydrocarbons (TPH) as Gasoline Range Organics (GRO); TPH as Diesel Range Organics (DRO); TPH as Oil and Grease (Oil & Grease); and Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX). Analytical results from these soil borings are presented in Table 1.

In September 1994, three groundwater monitoring wells (MW-1, MW-2, and MW-3) were installed to approximately 20 feet bgs to further assess subsurface soil and groundwater conditions. No visible indications or odors of petroleum hydrocarbons were present in soils collected from the boreholes for MW-1 and MW-2. Petroleum hydrocarbon odors were noted in soils collected from soil boring MW-3. Two soil samples were collected from each borehole at 6 and 10 feet bgs and submitted to Superior Analytical for analysis of TPH-GRO/DRO; Oil & Grease; BTEX; Halogenated Volatile Organic Compounds (HVOCs); and Semi-Volatile Organic Compounds (SVOCs). Petroleum hydrocarbon analytical results from soil samples collected from MW-1, MW-2, and MW-3 are presented in Table 1.

No benzene, toluene, xylenes, or SVOCs were detected in the soil samples submitted from MW-1, MW-2, and MW-3, with the exception of the following from MW-3: 0.067 milligrams per kilogram (mg/kg) of ethylbenzene and 500 mg/kg of 2-methyl-naphthalene detected in soil sample MW 3-1-1, collected at 6 feet bgs; and 0.068 mg/kg of ethylbenzene, 31 mg/kg of tetrachloroethene (PCE), 600 mg/kg of naphthalene, and 700 mg/kg of 2-methyl-naphthalene detected in soil sample MW 3-2-2, collected at 10 feet bgs.

In December 1996, in support of a Tier 1 risk-based corrective action (RBCA) evaluation, four soil borings (PB-1 through PB-4) were advanced to approximately 10 to 16 feet bgs; and PB-4 was subsequently converted to monitoring well MW-4. Soil samples collected from PB-1 and PB-4 at approximately 3 feet bgs were submitted to Columbia Analytical Services of San Jose, California for analysis of TPH-GRO; BTEX; and Oil & Grease. Analytical results for these soil samples are presented in Table 1.

In September 2009, four direct-push soil borings (SB-1, SB-4, SB-5, and SB-8) were completed along a transect extending approximately 14 feet north (upgradient) and 45 feet south (downgradient) of the former UST location (Figure 2). Soil borings were advanced to approximately 20 feet bgs for collection of soil and grab groundwater samples. Soil and grab groundwater samples collected were analyzed for: TPH DRO; Oil

Reference: Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report

& Grease; TPH-GRO, BTEX, and methyl tert-butyl ether (MTBE). Soils were predominantly silty clays from approximately 1-foot bgs to approximately 15 feet bgs, underlain by silty sand and clay from 15 feet to 20 feet bgs. Gravelly clays were encountered from approximately 10 to 19 feet bgs in boring SB-8.

Soil analytical results indicate that TPH-DRO concentrations from selected samples were detected above the Regional Water Quality Control Board Environmental Screening Levels (ESLs) of 83 mg/kg for soil samples collected from SB-1, SB-4, and SB-8. Analytical results for soil samples collected during this subsurface investigation are included in Table 1.

Previous soil borings and groundwater monitoring well locations are shown on Figure 2.

Groundwater Data Summary

Groundwater monitoring and sampling of wells MW-1, MW-2, and MW-3 began in 1994, with well MW-4 added in 1996. Groundwater levels were monitored to assess groundwater flow directions and hydraulic gradients. These wells were also monitored for the presence of free-phase product (free-product). Depth to water and depth to product was measured to the nearest 0.01 feet from the top of the well casing, using an electronic water-level meter and an oil/water interface probe, respectively. Since 1994, the depth to groundwater has generally varied from 3.03 feet to 7.67 feet below top of casing in the four wells. Groundwater flows generally from the south to the southwest. Historic and current groundwater elevation data is shown in Table 2.

Concentrations of petroleum hydrocarbons and related constituents, including MTBE, have generally been below laboratory reporting limits (LRLs) in Site wells. Since groundwater monitoring began, TPH-GRO has not been detected above LRLs in wells MW-1, MW-2, and MW-4. TPH-DRO was reported in these three wells only from one sampling event (September 2004) at concentrations ranging from 78 to 103 micrograms per liter ($\mu\text{g/L}$). Beyond the September 2004 sampling event, concentrations of petroleum hydrocarbons have been consistently below LRLs, with the exception of 87 $\mu\text{g/L}$ TPH-DRO reported in MW-4 in December 2006. BTEX and MTBE concentrations have not been detected above LRLs in samples from wells MW-1, MW-2, and MW-4. Analytical results for these groundwater samples are summarized in Table 3.

Well MW-3, installed approximately 20 feet downgradient of the former used oil UST, has periodically contained free product. Initial sampling at this location in 1994 and 1995 reported TPH-GRO at concentrations up to 290 $\mu\text{g/L}$, TPH-DRO at concentrations up to 960 $\mu\text{g/L}$, and BTEX concentrations (benzene and total xylenes) up to 29 $\mu\text{g/L}$. Benzene was detected in well MW-3 at a concentration of 95 $\mu\text{g/L}$ in 1996, along with total xylenes of up to 53 $\mu\text{g/L}$. Passive free product removal, using adsorbent socks, was implemented between August 2002 and December 2007. During this time, MW-3 was sampled only once, in March 2005, at which time TPH-GRO, TPH-DRO, benzene, and MTBE were detected above ESLs. Free product removal was discontinued in 2007 at the direction of ACEH, who requested evaluation of more aggressive remediation techniques. Analytical results for these groundwater samples are summarized in Table 3.

Total lead has been sporadically detected in all Site wells at concentrations ranging from 5.6 to 28 $\mu\text{g/L}$. The presence of lead at similar concentrations in all Site wells is likely indicative of a background condition unrelated to the historical release of petroleum hydrocarbons from the former used oil UST. Neither HVOCS nor SVOCs were detected in groundwater samples collected from MW-1, MW-2, or MW-3 in 1994, except for 1.0 and 1.7 $\mu\text{g/L}$ of chloroform in MW-1 and MW-2, respectively, and 10 $\mu\text{g/L}$ of bis (2-ethylhexyl) phthalate in MW-1. The following HVOCS were detected in MW-3: 8.3 $\mu\text{g/L}$ of vinyl chloride; 1.6 $\mu\text{g/L}$ of 1,1-dichloroethene; 17 $\mu\text{g/L}$ of 1,1-dichloroethane; 8.4 $\mu\text{g/L}$ of cis-1,2-dichloroethene; 12 $\mu\text{g/L}$ of 1,1,1-trichloroethane; 1.2 $\mu\text{g/L}$ of trichloroethene; and, 12 $\mu\text{g/L}$ of PCE.

Reference: Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report

Groundwater was collected from soil borings SB-1, SB-4, SB-5, and SB-8 in September 2009. Analytical results for these samples indicate that TPH-DRO concentrations were detected above the ESL of 100 µg/L in groundwater samples collected from SB-1 and SB-4. Analytical results for the groundwater samples collected during this subsurface investigation are included in Table 3.

Monitoring Well Destruction

In September 2009, existing monitoring well MW-3 was destroyed via pressure grouting by ECA of Aptos, California, in accordance with State and the County well standards. At the request of Ms. Vicky Hamlin at the Alameda County Public Works Agency, a vacuum truck was utilized to remove approximately 500 gallons of oily water from MW-3 prior to the initiation of well destruction activities. The removal of 500 gallons of oily water from MW-3 was a mechanism for accelerating remediation of impacted groundwater.

The total depth of 17 feet in well MW-3 was measured prior to initiating well destruction activities to determine the length of well casing to be filled with grout. Pressure grouting was proceeded by pumping grout through a tremie pipe from the bottom up. Upon completion of grouting activities, Stantec confirmed a pressure of 25 pounds per square inch was maintained for a minimum of 5 minutes. High strength concrete mix was trowled into the well box to fill annular space and the well lid was secured. The location of former groundwater monitoring well MW-3 is shown on Figure 2.

REMEDIAL ACTION ACTIVITIES

Stantec completed tasks identified in the Revised Work Plan for over-excavation of soil adjacent to a former used oil UST; groundwater monitoring well installation; and continuation of semi-annual groundwater monitoring at the Site between August 13th and 20th, 2012. The excavation plan and locations of confirmation soil samples are shown on Figure 3. Selected photographs of the various remedial action activities are included in Attachment B.

Preliminary Activities

Prior to initiating field activities, a Site-specific health and safety plan (HASP) was prepared for use by personnel implementing the Revised Work Plan. The HASP, a copy of which was kept available on-Site at all times, addressed the proposed field work. Subcontractors performing field activities were provided a copy of the HASP prior to starting work.

Stantec conducted a pre-excavation meeting at the Site, which included the Stantec project manager, field staff, tenant representatives, and the remedial action subcontractor (ICS – Norcal of Oakland, California). The purpose of the meeting was to coordinate site activities with the current tenant, to provide the subcontractors with an opportunity view the worksite and provide input, and to conduct an underground utility clearance prior to initiating field activities. The utility clearance included notifying Underground Service Alert (USA) of the proposed work a minimum of 48 hours prior to initiating the field investigation, and securing the services of a private utility locating company (Cruz Brothers of Scotts Valley, California) to confirm the absence of underground utilities in the area to be excavated.

Stantec obtained Water Resources Well Permit Number W2012-0557 from the Alameda County Public Works Agency for installation of monitoring well MW-5, and completed and submitted the State DWR Form 188, as required. Mr. James Yoo was contacted for an inspection prior to drilling, as required. Both the Well Permit and DWR Form are enclosed as Attachment C.

Reference: Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report**Soil Excavation**

As indicated on Figure 3, the overall excavation covered the area in front of service bay numbers 5 through 8 and the storage area. Based on the results of previous investigations, the area of the former UST to be excavated was determined to be 15-feet wide (limited by the presence of a high pressure natural gas to the west and the Site building to the east), by 60-feet long (the extent of known petroleum impacted soils), and by 8-feet deep (the anticipated depth of first-encountered groundwater).

To minimize impact of the excavation activities on access to the service bays during the day, excavation activities were conducted during non-operational business hours (i.e., between 6:00 PM and 7:00 AM on weekdays). To further this effort, the excavation was completed using a slot-cut method by which soil was excavated in sections (or trenches) narrow enough to be covered by steel plates by 7:00 AM daily. The concrete apron covering each of the three to five foot-wide trenches was removed prior to initiating excavation activities.

During excavation activities, a waterline was unearthed parallel to the building at a depth of approximately 12-inches. The waterline was at a distance of between 19 and 26-inches from the building's foundation. This limited the eastern extent of the excavation.

Excavated soil was stockpiled on visqueen in a pre-designated lay down area, and covered by 7:00 AM daily. Soil proximate to the former UST was stored and characterized separately from the rest of the excavated soil, due to the presence of a strong odor and visible sheen on the soil. This investigation-derived waste was subsequently sampled by Stantec, and profiled as non-hazardous waste. It was transported by Intrinsic Trucking Company of Santa Rosa, California for disposal at the Republic Services – Vasco Road Landfill in Livermore, California. A total of 330.10 tons of non-hazardous soil was disposed, the bills of lading for which are included as Attachment D).

Confirmation Soil Sampling

Confirmation soil samples were collected from the base of the excavation and approximately 5 to 6 feet bgs (sidewall samples) within each trench to determine whether residual source material was removed by the excavation activities or if it remains at the Site. One soil confirmation sample was collected for approximately every 10 linear feet of excavation; a total of 20 confirmation soil samples (EX-1 through EX-20) were collected. Confirmation soil samples were transported to Test America Laboratories, Inc. in Pleasanton, California (Test America), a state certified laboratory, for analysis under chain-of-custody protocol. Samples were analyzed for the following:

- TPH-GRO by 8260B;
- TPH-DRO by 8015B;
- Oil & Grease by 9071B;
- BTEX by 8260B;
- MTBE by 8260B;
- SVOCs by 8270C;
- Lead (Pb) by 6010B; and
- Lead scavengers (ethylene dichloride [EDC] and ethylene dibromide [EDB]) by 8260B.

Application of Oxygen Releasing Compound (ORC) Amendment

Stantec applied approximately 40 pounds of ORC to each trench excavation (i.e., that portion in communication with the first encountered water-bearing zone) prior to placement of backfill. Addition of the

Reference: Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report

ORC is designed to stimulate and enhance bioremediation of petroleum hydrocarbons present in groundwater. The ORC selected for use was a Regenesis product, which is a combination of calcium and oxyhydroxide [CaO(OH)₂] and calcium hydroxide [Ca(OH)₂]. Regenesis recommended ORC application requirements and Material Safety Data Sheet are provided in Attachment E. Approximately 400 pounds of ORC were applied to the overall excavation.

Backfilling, Compaction, and Site Restoration

Once the soil was excavated, confirmation samples collected, and ORC placed, each of the 10 trenches were filled with a sand-and-cement slurry and compacted. Each excavation was then covered with a steel plate prior to 7:00 AM. Trenches were excavated in leap-frog fashion to allow time for the slurry to establish its full bearing strength before the plate was removed. After the last trench was completed, the concrete apron over all trenches was replaced to match the surrounding surface.

GROUNDWATER MONITORING WELL INSTALLATION AND DEVELOPMENT ACTIVITIES**Groundwater Monitoring Well Installation and Development**

On August 14, 2012, Stantec installed monitoring well MW-5 (see Figure 3) down-gradient of the excavation, to monitor post-remediation groundwater conditions. The boring location was hand augured to 5-feet bgs to confirm the absence of subsurface underground utilities or obstructions. The boring was logged continuously from the surface to total depth investigated and recovered soils inspected by a Stantec geologist for parameters including staining, the presence of volatile organic vapors using a photo-ionized detector (PID), color, grain size, and moisture content. Soils were described in accordance with the Unified Soil Classification System (USCS) and recorded onto a boring log (Attachment F). The two-inch diameter well was installed to a total depth of 20-feet bgs, with a screened interval of 7 to 20 feet bgs, slotted at 0.02-inches. Groundwater was first encountered at 7-feet bgs.

A soil sample was collected on August 15, 2012 from between 6.5 and 7.0 feet bgs and retained for chemical analysis by capping a 6-inch long section of plastic sample sleeve tub with Teflon TM tape and plastic end caps. The sample was immediately labeled, placed in an ice-filled cooler for preservation, and transported to Test America, for analysis under chain-of-custody protocol. The sample was analyzed for the same contaminants as the confirmation soil samples. Analytical results for the sample were below laboratory reporting limits for all constituents of concern.

On August 17, 2012, MW-5 was developed along with MW-1, MW-2, and MW-4, in accordance with industry standards. The locations (X and Y coordinates) and elevations (Z coordinate) of the new well, MW-5, and existing monitoring wells MW-1, MW-2, and MW-4, were subsequently surveyed by a professional surveyor registered in the State of California, in accordance with applicable standards of AB 2886. The elevation of the well casing for MW-5 was determined to be 179.42 feet above mean sea level (MSL). The TOC data for all wells are shown in Table 2. The casing for MW-5 was notched on the north side to provide a reference point for future depth to water measurements.

SEMI-ANNUAL GROUNDWATER MONITORING EVENT

On August 21, 2012, Stantec initiated semi-annual groundwater sampling at the Site. Depth to groundwater measurements indicated groundwater flow was to the south at an average gradient of 0.013 feet per foot. Historic and current groundwater elevation data are included in Table 2 and illustrated on Figure 4.

Groundwater samples were submitted to Test America for the following analyses:

Reference: Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report

- TPH-GRO by 8260B;
- TPH-DRO by 8015B;
- Oil & Grease by 1664A;
- BTEX by 8260B;
- MTBE by 8260B;
- SVOCs by 8270C;
- Pb by 6010B; and
- Lead scavengers (EDC and EDB) by 8260B.

FINDINGS**Confirmation Soil Samples**

Petroleum Hydrocarbons, Lead, and Lead Scavengers. Analytical results indicate detections of TPH-D above the ESL of 83 mg/kg in 12 confirmation soil samples, ranging in value from 83 mg/kg (EX-14) to 2,600 mg/kg (EX-20). Benzene was detected above the ESL of 0.044 mg/kg in four locations, ranging in value from 0.048 mg/kg (EX-7) to 0.12 mg/kg (EX-8). Xylenes were detected above the ESL of 2.3 mg/kg in two locations ranging in value from 3.3 mg/kg (EX-10) to 3.9 mg/kg (EX-8).

Analytical data for petroleum hydrocarbons, lead, and lead scavengers in confirmation soil samples are summarized in Table 4A. Copies of certified laboratory analytical reports and chain of custody forms are provided in Attachment G.

SVOCs. Analytical results indicate detections of 2 methylnaphthalene above the ESL of 0.25 mg/kg in four (4) confirmation soil samples: EX-7, EX-8, EX-9, and EX-10. Detections ranged from 0.89 mg/kg (EX-9) to 3.5 mg/kg (EX-10).

Analytical data for SVOC detections in confirmation soil samples are summarized in Table 4B. SVOC concentrations for sample locations not shown in Table 4B, were below LRLs. Copies of certified laboratory analytical reports and chain of custody forms are provided in Attachment G.

Groundwater Monitoring Samples

On August 17, 2012, wells MW-1, MW-2, MW-4, and MW-5 were developed in accordance with industry standards. Groundwater samples were collected approximately 72 hours following well development (i.e., on August 21, 2012). Analytical results indicate no detections of any contaminants above ESLs in any of the wells, except for 8.1 µg/L of lead in MW-5 (the ESL for lead is 2.5 µg/L). Groundwater field data sheets are provided in Attachment H.

Groundwater sample results are shown in Table 5. Copies of certified laboratory analytical reports and chain of custody forms are provided in Attachment I.

Soil and Groundwater Goals

In the *Corrective Action Work Plan* (Stantec 2009), Stantec proposed using ESLs established by the San Francisco Bay Regional Water Quality Control Board (RWQCB, 2008) for commercial property uses where groundwater is a potential drinking water source as soil and water quality goals to guide remedial activities at the Site. Stantec used the ESLs for this purpose during the direct push soil boring investigation.

Reference: Remediation Summary Report and First Semi-Annual Groundwater Monitoring Report

However, through the course of implementing the scope of work in the Revised Work Plan, Stantec encountered physical limitations in the subsurface that could not reasonably be altered and prevented further soil excavation in the area. The size of the soil excavation was limited by the following factors:

- The presence of electrical conduit to the north of the excavation,
- The presence of a gas line to the west of the excavation,
- The presence a water line at 20-inches from the foundation to the east of the excavation, and
- The presence of groundwater beneath the excavation.

These factors lead Stantec to conclude that ESLs should not be used as drivers for this cleanup action. In addition, detections in MW-5, south of the excavation, are near or below MDLs, with only a low concentration of lead being detected. We believe that the water quality objectives of the Water Quality Control Plan for the San Francisco Bay Basin are being reached as demonstrated with the current results and will continue to be exhibited through the groundwater monitoring program.

CONCLUSIONS AND RECOMMENDATIONS

Stantec concludes that there is sufficient data to satisfy the water quality protection objectives of the Basin Plan and recommends modification of the groundwater monitoring program from semi-annual to quarterly for three more quarters. If groundwater analytical results continue as recently demonstrated during the next three quarterly sampling events, Stantec will prepare a Site Closure Request based on the RWQCB's recently adopted *Low-Threat Underground Storage Tank Case Closure Policy*.

LIMITATIONS

This letter report was prepared in accordance with the scope of work outlined in Stantec's contract and with generally accepted professional engineering and geologic consulting practices existing at the time this report was prepared and applicable to the location of the Site. It was prepared for the exclusive use of the Goodyear Tire & Rubber Company for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Stantec. To the extent that this report is based on information provided to Stantec by third parties, Stantec may have made efforts to verify this third party information, but Stantec cannot guarantee the completeness or accuracy of this information. The opinions expressed and data collected are based on the conditions of the Site existing at the time of the field investigation. No other warranties, expressed or implied are made by Stantec.

Notes:

All soil concentrations measured in milligrams per kilogram (mg/kg)

TPH = Total petroleum hydrocarbons

TPH as Gasoline = analyzed by EPA 8260B

TPH as Diesel = analyzed by EPA 8015B

Oil & Grease = reported as HEM with silica gel cleanup (SGT-HEM) analyzed by EPA 9071B

Ethylbenzene = analyzed by EPA 8260B

ESL = Environmental Screening Levels from California Regional Water Quality Control Board San Francisco Bay Region - Shallow Soils (<3 meters bgs) and Deep soils (>3 meters bgs) where Groundwater is a Current or Potential Source of Drinking Water for Commercial and Industrial Areas - November 2007 (Revised May 2008)

NE = Not established

Bold numbers denote concentration levels at or above San Francisco Bay Regional Water Quality Control Board ESLs

NT = Not Tested

< = concentration is below the laboratory reporting limit

Notes:

µg/L = micrograms per Liter

ND = Not detected above laboratory reporting limits

NE = No established ESL values

NS = Not Sampled

NT = Not tested

ESL = Environmental Screening Levels from California Regional Water Quality Control Board San Francisco Bay Region - Shallow Soils (<3 meters bgs) and Deep soils (>3 meters bgs) where Groundwater is a Current or Potential Source of Drinking Water for Commercial and Industrial Areas - November 2007 (Revised May 2008)

TPH = Total petroleum hydrocarbons

TPH as Gasoline = historically analyzed by EPA Method 8015B; beginning December 3, 2007 TPHg analyzed by LUFT GC/MS 8260B

TPH as Diesel = analyzed by EPA Method 8015B/3510; beginning August 21, 2012 analyzed by 8015B with silica gel cleanup

Oil & Grease = also reported as HEM with silica gel cleanup (SGT-HEM) analyzed by EPA 1664A.

BTEX compounds = historically analyzed by EPA Method 8021B; beginning September 30, 2003 VOCs analyzed by EPA Method 8260B

MTBE = Methyl tert-butyl ether; historically analyzed by EPA Method 8021B; beginning September 30, 2003 VOCs analyzed by EPA Method 8260B

EDC and EDB = analyzed by EPA Method 8260B

* Due to the laboratory exceeding the hold time for VOC analysis, MW-1 and MW-2 were resampled on 6/15/06.

** Groundwater Monitoring Well MW-3 was destroyed September 10, 2009.

^j Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.

< concentration is below method detection limit (MDL)

Bold numbers denote concentration levels at or above San Francisco Bay Regional Water Quality Control Board ESLs

Subject: Corrective Action Plan Approval for Fuel Leak Case No. RO0000474 and GeoTracker
Global ID T0600101801, Merritt Tire Sale, 3430 Castro Valley Boulevard, Castro
Valley, CA 94546

Dear Mr. McClellan and Ms. Phillips:

Alameda County Environmental Health (ACEH) staff has reviewed the case file for the above-referenced site including the recently submitted document entitled, "Corrective Action Work Plan," dated May 14, 2009, which was prepared by Stantec Consulting Corporation for the subject site. Stantec proposes to install up to six direct push borings on ten foot centers along a transect extending down-gradient of the former UST to determine the extent of the proposed excavation, which was selected as the most cost-effective remedial alternative to mitigate the effects of the unauthorized release that had occurred at the site.

The remedial alternative selected presented in the above-mentioned corrective action work plan (CAP) is acceptable. However, public participation is a requirement for the CAP process. Therefore, ACEH will notify potentially affected stakeholders who live or own property in the surrounding area of the proposed remediation described in the "Corrective Action Work Plan" through mailing of a fact sheet (enclosed). Public comments on the proposed remediation will be accepted for a period of thirty days beginning Monday, June 22, 2009 through Wednesday, July 22, 2009. Following the public comment period, the comments received including ACEH's comments described below, must be addressed and incorporated into a Final CAP. Should no comments be received, the "Corrective Action Work Plan" can be implemented without revision provided that the following comments are implemented during the field work.

TECHNICAL COMMENTS

1. **Confirmation Soil Sampling** – Stantec does not propose to collect bottom soil samples because the excavation will be extended into shallow groundwater. ACEH is concerned that if soil samples from the bottom are not collected, it will be difficult to determine whether

residual source material has been removed or remains at the site. Therefore, the proposed remediation alternative can be implemented provided that bottom samples are collected in addition to the proposed sidewall samples to delineate the vertical extent of soil impact.

2. **Cleanup Levels, Cleanup Goals & Water Quality Objectives** – Stantec proposes “using [San Francisco Bay Regional Water Quality Control Board’s] Environmental Screening Levels (ESLs) as soil and water quality goals to guide remedial activities at the site.” For clarification, please note that soil cleanup levels should ultimately (within a reasonable timeframe) achieve water quality objectives (cleanup goals) for groundwater in accordance with San Francisco Regional Water Quality Control Board Basin Plan. Please include a discussion that provides justification that the proposed cleanup levels will achieve water quality objectives within a reasonable time in the Final CAP.
3. **Groundwater Contaminant Plume Monitoring** – Stantec proposes to install a monitoring well down-gradient of the excavation to monitor post-remediation groundwater conditions and to continue semi-annual groundwater sampling performed during the second and fourth quarters of the year. ACEH concurs with Stantec’s proposal for monitoring well installation, however, we recommend that semi-annual groundwater sampling is conducted during the first and third quarters of the year.

NOTIFICATION OF FIELDWORK ACTIVITIES

Please schedule and complete the fieldwork activities by the date specified below and provide ACEH with at least three (3) business days notification prior to conducting the fieldwork.

TECHNICAL REPORT REQUEST

Please submit technical reports to ACEH (Attention: Paresh Khatri), according to the following schedule:

- **July 22, 2009** – End of 30-day Public Participation Period
- **July 31, 2009** – Final CAP
- **October 29, 2009** – Excavation & Monitoring Well Installation Report
- **Due within 30 Days of Sampling** – Semi-annual Monitoring Report (3rd Quarter 2009)
- **Due within 30 Days of Sampling** – Semi-annual Monitoring Report (1st Quarter 2010)

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

Mr. McClellan and Ms. Phillips
RO0000474
June 18, 2009, Page 3

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of reports in electronic form. The electronic copy replaces paper copies and is expected to be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program FTP site are provided on the attached "Electronic Report Upload Instructions." Submission of reports to the Alameda County FTP site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) GeoTracker website. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for all groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitoring wells, and other data to the GeoTracker database over the Internet. Beginning July 1, 2005, these same reporting requirements were added to Spills, Leaks, Investigations, and Cleanup (SLIC) sites. Beginning July 1, 2005, electronic submittal of a complete copy of all reports for all sites is required in GeoTracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.swrcb.ca.gov/ust/electronic_submittal/report_rqmts.shtml).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

Mr. McClellan and Ms. Phillips
RO0000474
June 18, 2009, Page 4

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

If you have any questions, please call me at (510) 777-2478 or send me an electronic mail message at paresh.khatri@acgov.org.

Sincerely,

Paresh C. Khatri
Hazardous Materials Specialist

File

Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC)	ISSUE DATE: July 5, 2005 REVISION DATE: March 27, 2009 PREVIOUS REVISIONS: December 16, 2005, October 31, 2005
SECTION: Miscellaneous Administrative Topics & Procedures	SUBJECT: Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

REQUIREMENTS

- Entire report including cover letter must be submitted to the ftp site as a **single portable document format (PDF) with no password protection**. (Please do not submit reports as attachments to electronic mail.)
- It is **preferable** that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- Signature pages and perjury statements **must** be included and have either original or electronic signature.
- **Do not password protect the document.** Once indexed and inserted into the correct electronic case file, the document will be secured in compliance with the County's current security standards and a password. **Documents with password protection will not be accepted.**
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:
RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Additional Recommendations

- A separate copy of the tables in the document should be submitted by e-mail to your Caseworker in **Excel** format. These are for use by assigned Caseworker only.

Submission Instructions

- 1) Obtain User Name and Password:
 - a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
 - i) Send an e-mail to dehloptoxic@acgov.org
Or
 - ii) Send a fax on company letterhead to (510) 337-9335, to the attention of My Le Huynh.
 - b) In the subject line of your request, be sure to include "**ftp PASSWORD REQUEST**" and in the body of your request, include the **Contact Information, Site Addresses**, and the **Case Numbers (RO# available in Geotracker) you will be posting for**.
- 2) Upload Files to the ftp Site
 - a) Using Internet Explorer (IE4+), go to <ftp://alcoftp1.acgov.org>
 - (i) Note: Netscape and Firefox browsers will not open the FTP site.
 - b) Click on File, then on Login As.
 - c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
 - d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
 - e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.
- 3) Send E-mail Notifications to the Environmental Cleanup Oversight Programs
 - a) Send email to dehloptoxic@acgov.org notify us that you have placed a report on our ftp site.
 - b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
 - c) The subject line of the e-mail must start with the RO# followed by **Report Upload**. (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO# use the street address instead.
 - d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

FACT SHEET ON ENVIRONMENTAL ASSESSMENT

RYNCK TIRE & BRAKE (FORMER MERRITT TIRE SALES)

3430 Castro Valley Blvd., Castro Valley, CA 94546

Fuel Leak Case No. RO0000474 and

GeoTracker Global ID T0600101801

Site Remediation Summary

This fact sheet has been prepared to inform community members and other interested stakeholders regarding the status of a proposed soil and groundwater cleanup at the Merritt Tire Sales located 3430 Castro Valley Boulevard, Castro Valley, California. Goodyear Tire & Rubber Company, the lead responsible party for the leaking underground storage tank case is proposing excavation and groundwater pumping as the remediation method to cleanup the site.

Site Background

The site is located on the north side of Castro Valley Boulevard, just west side of Redwood Road. It is bounded on the north by a bowling alley, on the east by Patio Drive, on the south by commercial properties and on the west by Redwood Road. The site currently operates as Rynck Tire and Brake. Land use immediately surrounding the site is commercial.

Remediation Alternative: Excavation with Groundwater Extraction

Soil excavation followed by groundwater extraction from the open pit is proposed to cleanup the soil and groundwater contamination at the site. Excavation removes the hydrocarbon contaminants from the soil. Groundwater extraction is proposed to cleanup the groundwater entering the excavation pit. The water in the pit will be pumped out and disposed of off-site to reduce the concentration of hydrocarbon contaminants in the groundwater. Clean backfill material would be imported as necessary to restore the site to match the existing grade. This method is effective because it would remove contaminated soil, which would be confirmed by soil and groundwater sampling and analysis.

FAX (510) 337-9335

Next Step

Goodyear Tire & Rubber Company is working with Alameda County Environmental Health (ACEH) to implement soil and groundwater cleanup at the site. The proposed alternative is described in a report prepared by Stantec Consulting Corporation on behalf of Goodyear Tire & Rubber Company: "Corrective Action Work Plan," dated May 14, 2009. The public is invited to review and comment on the cleanup action proposed in the Report. The electronic report is available for review on ACEH's website (<http://www.acgov.org/aceh/lop/ust.htm>) or the State Water Resources Control Board's GeoTracker website (<http://www.geotracker.waterboards.ca.gov/>). The report and case file are also available for on-line review at ACEH located at 1131 Harbor Bay Parkway in Alameda, California. Please send a fax to 510-337-9335 to request a date and time to review the electronic case file. Please send written comments regarding the corrective action to Paresh Khatri at the address below. All written comments received by **July 22, 2009** will be forwarded to the Responsible Party and will be considered and responded to prior to a final determination on the proposed cleanup.

Phone: 408-356-6124 x261
Phone: --
Phone: 408-356-6124 x242
Cell: 925-822-6792

Receipt Number: WR2012-0249	Total Due:	\$397.00
Payer Name : Alicia Falk	Total Amount Paid:	\$397.00
	Paid By: MC	PAID IN FULL

Works Requesting Permits:

Well Construction-Monitoring-Monitoring - 1 Wells
Driller: Woodward Drilling - Lic #: 710079 - Method: hstem

Work Total: \$397.00

Specifications

Permit #	Issued Date	Expire Date	Owner	Well Id	Hole Diam.	Casing Diam.	Seal Depth	Max. Depth
W2012-0557	08/10/2012	11/13/2012	MW-3A		8.00 in.	2.00 in.	6.00 ft	20.00 ft

Specific Work Permit Conditions

1. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
2. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.
3. Prior to any drilling activities, it shall be the applicant's responsibility to contact and coordinate an Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits or agreements required for that Federal, State, County or City, and follow all City or County Ordinances. No work shall begin until all the permits and requirements have been approved or obtained. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County an Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.
4. Compliance with the well-sealing specifications shall not exempt the well-sealing contractor from complying with appropriate State reporting-requirements related to well construction or destruction (Sections 13750 through 13755 (Division 7, Chapter 10, Article 3) of the California Water Code). Contractor must complete State DWR Form 188 and

Alameda County Public Works Agency - Water Resources Well Permit

mail original to the Alameda County Public Works Agency, Water Resources Section, within 60 days. Include permit number and site map.

5. Applicant shall contact James Yoo for an inspection time at 510-670-6633 at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
 6. Wells shall have a Christy box or similar structure with a locking cap or cover. Well(s) shall be kept locked at all times. Well(s) that become damaged by traffic or construction shall be repaired in a timely manner or destroyed immediately (through permit process). No well(s) shall be left in a manner to act as a conduit at any time.
 7. Minimum surface seal thickness is two inches of cement grout placed by tremie.
 8. Minimum seal (Neat Cement seal) depth for monitoring wells is 5 feet below ground surface(BGS) or the maximum depth practicable or 20 feet.
 9. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.

ATTACHMENT E
OXYGEN RELEASE COMPOUND MSDS

REGENESIS

Oxygen Release Compound (ORC[®])

Installation Instructions

(Excavation Applications)

SAFETY:

Pure ORC is shipped to you as a fine powder, which is rated at -325 mesh (passes through a 44 micron screen). It is considered to be a mild oxidizer and as such should be handled with care while in the field. Field personnel should take precautions while applying the pure ORC. Typically, the operator should work up wind of the product as well as use appropriate safety equipment. These would include eye, respiratory protection and gloves as deemed appropriate by exposure duration and field conditions.

Although two options are discussed, application of ORC should never be applied by personnel within the tank excavation, unless proper shoring or sidewall cutback is in place.

GENERAL GUIDELINES:

ORC can be applied in a dry powder form or as a slurry. Field conditions dictate which form of ORC can be used most effectively.

Installation of ORC should be within the tank excavation floor and/or in an adequate backfill section thickness to account for the anticipated groundwater “smear zone”.

Maximum treatment effect is obtained when ORC is mixed as thoroughly as possible within the backfill material. The more dispersed the ORC slurry/powder within the excavation backfill, the more effective the treatment.

The quantity of ORC to be used is generally calculated prior to moving into the field for installation. Generally it is applied at a rate of between 0.1% and 1.0% by weight of the soil matrix. The following illustrates a dilute application rate calculation:

Use a weight/weight percent of ORC/backfill material to ensure distribution of the ORC into the desired aquifer section. For example: a 0.15% weight of ORC to weight of backfill for the standard ORC weight (30 pounds) per container calculates as follows: $30 \text{ lb. ORC} / 0.15\% = 20,000 \text{ lbs. of soil matrix}$. Thus, to achieve a 0.15% mixture of ORC in the backfill material, 30 lb. of pure ORC should be mixed into 10 tons ($20,000 \text{ lbs.} \div 2,000 \text{ lbs./ton}$) of backfill, or approximately 7 - 10 cubic yards of soil depending on field conditions. Professional judgment should be used to select the appropriate soil mass per cubic yard for designing each site treatment.

CHOOSING THE FORM OF INSTALLATION:

Pure ORC is shipped to you in a powder form. Weather conditions (especially wind) may have a direct effect on the application of ORC as a tank backfill amendment.

Application of the dry powder may be difficult in windy conditions. To counter the effects of wind (and the subsequent potential loss of ORC), Regenesis recommends that a water source or a spray tank be on-site to wet down the ORC and the backfill material as ORC is applied.

Application of ORC in a slurry format is a very effective method and eliminates the wind issue.

Four somewhat different installation conditions can be encountered in the field:

- ORC in a pea gravel back-fill. (“Type 1”)
- ORC in a soil back-fill. (“Type 2”)
- ORC mixed in native soil in the bottom of a tank pit. (“Type 3”)
- ORC installed in soil under standing water in the bottom of a tank pit. (“Type 4”)

A single tank pit excavation can include more than one of these conditions, depending on the site and extent of treatment. Instructions for each condition are discussed separately in the following sections. After the installation instructions are detailed instructions for mixing the slurry, if that is the option chosen.

INSTALLATION INSTRUCTIONS:

“Type 1,” ORC in a Pea Gravel Back-fill

The easiest method for installing ORC in pea gravel back-fill is to mix the ORC in the material in a backhoe or skiploader bucket before placing it in the excavation.

• Dry Powder method

Into each scoop of back-fill material add the appropriate portion of ORC being installed. Generally, it is advisable to moisten the material in the bucket to reduce wind blown ORC loss. Excessive winds make this method not feasible.

After mixing the dry powder in the bucket, it is dumped into the bottom of the excavation. The backhoe bucket can be used for further mixing in the excavation.

• Slurry method

Mix a 63% solids slurry of ORC and water (see “Steps to make ORC slurry”). This relatively thick slurry is used to help keep the ORC dispersed through the pea gravel, even when it contacts water in the bottom of the excavation during installation. It is generally desirable to avoid having the ORC run down through the pea gravel and collect in the bottom of the excavation. The thick slurry addresses this issue.

In each scoop of back-fill material, add the appropriate amount of ORC slurry. Pre-mix the materials in the backhoe bucket. After mixing, dump the slurry and back-fill into the bottom of the excavation. The backhoe bucket can be used for further mixing in the

excavation.

If the slurry method is being used, observe the physical behavior of the ORC in the fill material. If the ORC collects at the bottom of the back-fill material, increase the percent solids content by reducing the amount of water being used to make the slurry.

“Type 2,” ORC in a Soil Back-fill

Follow the instructions for the pea gravel back-fill method, except:

If the slurry method is being used, the solids content should be reduced. Typically a 50% solids is appropriate, although soil conditions sometimes dictate lower solids contents (see “Steps to make ORC slurry”).

“ Type 3,” ORC Mixed in Native Soil in the Bottom of the Tank Pit

When ORC is added to the bottom of a tank pit it may be done by backhoe or injection.

CAUTION: Personnel should never work within the tank excavation, unless proper shoring or sidewall cutback is in place.

- **Backhoe method**

A skilled backhoe operator can distribute the ORC around the bottom of the tank excavation and, using the bucket, mix it thoroughly. If there are no winds, it may be possible to:

1. Put the dry ORC powder in the backhoe bucket,
2. Lower it to the bottom of the pit,
3. Gently deposit the ORC evenly on the remaining soil,
4. Use the bucket to mix the powder into the soil,
5. To mitigate dusting, if necessary, spray water into the excavation during the process.

An alternative backhoe method is to use a 50% (or less) solids ORC slurry (see “Steps to make ORC slurry”) in place of the dry powder. This eliminates the dusting problem, and in some cases enhances the even distribution of ORC into the soil. Observe the slurry mixing behavior in the bottom of the excavation, and adjust the water content of the slurry to optimize mixing, if necessary.

- **Injection method**

If available, a pump and root feeder may be used to inject an ORC slurry into the excavation floor. This may require a more dilute slurry mix, and care should be taken to assure that the solids do not settle out of the slurry prior to injection.

“ Type 4.” ORC installed in standing water in the bottom of a tank pit

Application of ORC into tank excavations with standing water requires the operator apply ORC in a slurry form. ORC powder application in this scenario is not advised because a portion of the ORC particle fraction is not likely to pass through the surface tension of the standing water. Caution: Personnel should never work within the tank excavation, unless proper shoring or sidewall cutback is in place.

- **Backhoe method**

A skilled backhoe operator can distribute the ORC slurry within the excavation, and mix it into the soil underlying the standing water with the bucket. Steps for installation:

1. Mix a high solids content ORC slurry (63% solids). See (“Steps to make ORC slurry”).
2. Pour slurry into the backhoe bucket.
3. Lower the bucket to the standing water level in the excavation, and deposit the slurry as evenly as possible across the excavation floor. The dense slurry (63% solids is 1.6 grams per ml) will tend to make the majority of the slurry sink quickly to the bottom of the water layer.
4. Use the bucket to mix the slurry into the soil.
5. Water in the vicinity of the ORC slurry will often turn white and milky, since some of the ORC is dispersed within the standing water. This provides additional dispersion within the standing water and back-fill material as it is added to the excavation.

- **Injection method**

If available, a pump and root feeder may be used to inject an ORC slurry into the soil in an excavation. This may require a more dilute slurry mix, and care should be taken to assure that the solids do not settle out of the slurry prior to injection.

MIXING ORC SLURRY:

ORC powder is shipped to you in pre-measured batches. Each batch is contained in a plastic bag which is shipped in a 5-gallon bucket.

Remove the pre-measured ORC bag from the 5-gallon bucket and open
Measure and pour the appropriate amount of water from the following table into the
5 gallon bucket

Slurry Solids Content (%)	Pounds of ORC	Gallons of Water
63%	30 lbs.	2.1 gal. (2 gal. + 2 cups)
50%	30 lbs.	3.6 gal. (3 gal + 2 1/2 qts.)

Add the entire ORC pre-measured bag to the water (30 pounds). If the slurry solids contents of less than 50% are desired, the quantity of ORC per batch mixed in the bucket must be reduced. For example, a bucket containing four gallons of water would require 22.4 pounds of ORC to make a 40% solids slurry, and 16.6 pounds of ORC to make a 33% slurry.

Use an appropriate mixing device to thoroughly mix ORC and water. Regenesis

recommends use of a 0.5 Horsepower (minimum) hand held drill with a "jiffy mixer" or stucco mixer. A common paint paddle can be used to scrape the bottom and sides of the container to ensure thorough mixing. Standard environmental slurry mixers may also be used.

After mixing, small amounts of water can be added to adjust the consistency of the slurry.

When slurries are used, the early batches should be observed in the process of mixing with the soil. Each site can vary, due to soil type and moisture content. Based on professional judgment, additional water can be added to subsequent slurry batches.

ORC slurry should be used ASAP; if the ORC slurry has been standing more than 15 minutes, it should be remixed immediately before using. Do not let stand more than 30 minutes without stirring. Otherwise, the slurry will begin to harden into a weak cement.

For direct assistance or answers to any questions you may have regarding these instructions, contact Regenesis Technical Services at 949-366-8000.

Chemical Description: A mixture of Calcium OxyHydroxide [CaO(OH)₂] and Calcium Hydroxide [Ca(OH)₂].

Chemical Family: Inorganic Chemical

Trade Name: Advanced Formula Oxygen Release Compound
(ORC AdvancedTM)

Chemical Synonyms Calcium Hydroxide Oxide; Calcium Oxide Peroxide

Product Use: Used to remediate contaminated soil and groundwater
(environmental applications)

Section 2 – Composition

CAS No. **Chemical**

682334-66-3 Calcium Hydroxide Oxide [CaO(OH)₂]

1305-62-0 Calcium Hydroxide [Ca(OH)₂]

7758-11-4 Dipotassium Phosphate (HK₂O₄P)

7778-77-0 Monopotassium Phosphate (H₂KO₄P)

Section 3 – Physical Data

Form:	Powder
Color:	White to Pale Yellow
Odor:	Odorless
Melting Point:	527 °F (275 °C) – Decomposes
Boiling Point:	Not Applicable (NA)
Flammability/Flash Point:	NA
Auto- Flammability:	NA
Vapor Pressure:	NA
Self-Ignition Temperature:	NA
Thermal Decomposition:	527 °F (275 °C) – Decomposes
Bulk Density:	0.5 – 0.65 g/ml (Loose Method)
Solubility:	1.65 g/L @ 68° F (20° C) for calcium hydroxide.
Viscosity:	NA
pH:	11-13 (saturated solution)
Explosion Limits % by Volume:	Non-explosive
Hazardous Decomposition Products:	Oxygen, Hydrogen Peroxide, Steam, and Heat
Hazardous Reactions:	None

Section 4 – Reactivity Data

Stability: Stable under certain conditions (see below).

Conditions to Avoid: Heat and moisture.

Incompatibility: Acids, bases, salts of heavy metals, reducing agents, and flammable substances.

Hazardous Polymerization: Does not occur.

Section 5 – Regulations

TSCA Inventory List: Listed

CERCLA Hazardous Substance (40 CFR Part 302)

Listed Substance: No

Unlisted Substance: Yes

Reportable Quantity (RQ): 100 pounds

Characteristic(s): Ignitability

RCRA Waste Number: D001

SARA, Title III, Sections 302/303 (40 CFR Part 355 – Emergency Planning and Notification)

Extremely Hazardous Substance: No

SARA, Title III, Sections 311/312 (40 CFR Part 370 – Hazardous Chemical Reporting: Community Right-To-Know)

Hazard Category: Immediate Health Hazard
Fire Hazard

Threshold Planning Quantity: 10,000 pounds

Section 5 – Regulations (cont)

SARA, Title III, Section 313 (40 CFR Part 372 – Toxic Chemical Release Reporting: Community Right-To-Know

Extremely Hazardous Substance:

No

WHMIS Classification:

Oxidizing Material

Poisonous and Infectious Material

D

Material Causing Other Toxic Effects –

Eye and Skin Irritant

Canadian Domestic Substance List: Not Listed

Section 6 – Protective Measures, Storage and Handling

Technical Protective Measures

Storage:

Keep in tightly closed container. Store in dry area, protected from heat sources and direct sunlight.

Handling:

Clean and dry processing pipes and equipment before operation. Never return unused product to the storage container. Keep away from incompatible products. Containers and equipment used to handle this product should be used exclusively for this material. Avoid contact with water or humidity.

Section 6 – Protective Measures, Storage and Handling (cont)

Personal Protective Equipment (PPE)

Calcium Hydroxide

ACGIH® TLV® (2000)

5 mg/m³ TWA

OSHA PEL

Engineering Controls:

Total dust–15 mg/m³ TWA

Respirable fraction–

5 mg/m³ TWA

NIOSH REL (1994)

5 mg/m³

Respiratory Protection:

For many conditions, no respiratory protection may be needed; however, in dusty or unknown atmospheres use a NIOSH approved dust respirator.

Hand Protection:

Impervious protective gloves made of nitrile, natural rubber or neoprene.

Eye Protection:

Use chemical safety goggles (dust proof).

Skin Protection:

For brief contact, few precautions other than clean clothing are needed. Full body clothing impervious to this material should be used during prolonged exposure.

Other:

Safety shower and eyewash stations should be present. Consultation with an industrial hygienist or safety manager for the selection of PPE suitable for working conditions is suggested.

Industrial Hygiene:

Avoid contact with skin and eyes.

Protection Against Fire & Explosion:

NA

Section 7 – Hazards Identification

Emergency Overview:

Oxidizer – Contact with combustibles may cause a fire. This material decomposes and releases oxygen in a fire. The additional oxygen may intensify the fire.

Potential Effects:

Health

Irritating to the mucous membrane and eyes. If the product splashes in ones face and eyes, treat the eyes first. Do not dry soiled clothing close to an open flame or heat source. Any

Regenesis - ORC Advanced MSDS

clothing that has been contaminated with this product should be submerged in water prior to drying.

Inhalation: High concentrations may cause slight nose and throat irritation with a cough. There is risk of sore throat and nose bleeds if one is exposed to this material for an extended period of time.

Eye Contact: Severe eye irritation with watering and redness. There is also the risk of serious and/or permanent eye lesions.

Skin Contact: Irritation may occur if one is exposed to this material for extended periods.

Ingestion: Irritation of the mouth and throat with nausea and vomiting.

Section 8 – Measures in Case of Accidents and Fire

After Spillage/Leakage/Gas Leakage: Collect in suitable containers. Wash remainder with copious quantities of water.

Extinguishing Media: See next.

Suitable: Large quantities of water or water spray. In case of fire in close proximity, all means of extinguishing are acceptable.

Further Information: Self contained breathing apparatus or approved gas mask should be worn due to small particle size. Use extinguishing media appropriate for surrounding fire. Apply cooling water to sides of transport or storage vessels that are exposed to flames until the fire is extinguished. Do not approach hot vessels that contain this product.

First Aid: After contact with skin, wash immediately with plenty of water and soap. In case of contact with eyes, rinse immediately with plenty of water and seek medical attention. Consult an ophthalmologist in all cases.

Section 8 – Measures in Case of Accidents and Fire

Eye Contact: Flush eyes with running water for 15 minutes, while keeping the eyelids wide open. Consult with an ophthalmologist in all cases.

Inhalation: Remove subject from dusty environment. Consult with a physician in case of respiratory symptoms.

Regenesis - ORC Advanced MSDS

Ingestion: If the victim is conscious, rinse mouth and administer fresh water. DO NOT induce vomiting. Consult a physician in all cases.

Skin Contact: Wash affected skin with running water. Remove and clean clothing. Consult with a physician in case of persistent pain or redness.

Special Precautions: Evacuate all non-essential personnel. Intervention should only be done by capable personnel that are trained and aware of the hazards associated with this product. When it is safe, unaffected product should be moved to safe area.

Specific Hazards: Oxidizing substance. Oxygen released on exothermic decomposition may support combustion. Confined spaces and/or containers may be subject to increased pressure. If product comes into contact with flammables, fire or explosion may occur.

Section 9 – Accidental Release Measures

Precautions: Observe the protection methods cited in Section 3. Avoid materials and products that are incompatible with product. Immediately notify the appropriate authorities in case of reportable discharge (> 100 lbs).

Cleanup Methods: Collect the product with a suitable means of avoiding dust formation. All receiving equipment should be clean, vented, dry, labeled and made of material that this product is compatible with. Because of the contamination risk, the collected material should be kept in a safe isolated place. Use large quantities of water to clean the impacted area. See Section 12 for disposal methods.

Section 10 – Information on Toxicology

Toxicity Data

Acute Toxicity: Oral Route, LD₅₀, rat, > 2,000 mg/kg (powder 50%)
Dermal Route, LD₅₀, rat, > 2,000 mg/kg (powder 50%)
Inhalation, LD₅₀, rat, > 5,000 mg/m³ (powder 35%)

Irritation: Rabbit (eyes), severe irritant

Regenesis - ORC Advanced MSDS

Sensitization: No data

Chronic Toxicity: In vitro, no mutagenic effect (Powder 50%)

Target Effects: **Organ** Eyes and respiratory passages.

Section 11 – Information on Ecology

Ecology Data

10 mg Ca(OH)₂/L: pH = 9.0

100 mg Ca(OH)₂/L: pH = 10.6

Acute Exotoxicity: Fishes, Cyprinus carpio, LC₅₀, 48 hrs, 160 mg/L
Crustaceans, Daphnia sp., EC₅₀, 24 hours, 25.6 mg/L
(Powder 16%)

Mobility: Low Solubility and Mobility

Water – Slow Hydrolysis.

Degradation Products: Calcium Hydroxide

Abiotic Degradation: Water/soil – complexation/precipitation. Carbonates/sulfates present at environmental concentrations.
Degradation products: carbonates/sulfates sparingly soluble

Biotic Degradation: NA (inorganic compound)

Potential for Bioaccumulation: NA (ionizable inorganic compound)

Section 11 – Information on Ecology (cont)

Observed effects are related to alkaline properties of the product. Hazard for the environment is limited due to the product properties of:

- Comments:**
- No bioaccumulation
 - Weak solubility and precipitation as carbonate or sulfate in an aquatic environment.

Diluted product is rapidly neutralized at environmental pH.

Further Information: NA

Section 12 – Disposal Considerations

Waste Method: **Disposal** Consult current federal, state and local regulations regarding the proper disposal of this material and its emptied containers.

Section 13 – Shipping/Transport Information

D.O.T Name: **Shipping** Oxidizing Solid, N.O.S [A mixture of Calcium OxyHydroxide [CaO(OH)₂] and Calcium Hydroxide [Ca(OH)₂].

UN Number: 1479

Hazard Class: 5.1

Label(s): 5.1 (Oxidizer)

Packaging Group: II

STCC Number: 4918717

Section 14 – Other Information

HMIS® Rating Health – 2 Reactivity – 1
Flammability – 0 PPE - Required

HMIS® is a registered trademark of the National Painting and Coating Association.

NFPA® Rating Health – 2 Reactivity – 1
Flammability – 0 OX

NFPA® is a registered trademark of the National Fire Protection Association.

Reason for Issue: Update toxicological and ecological data

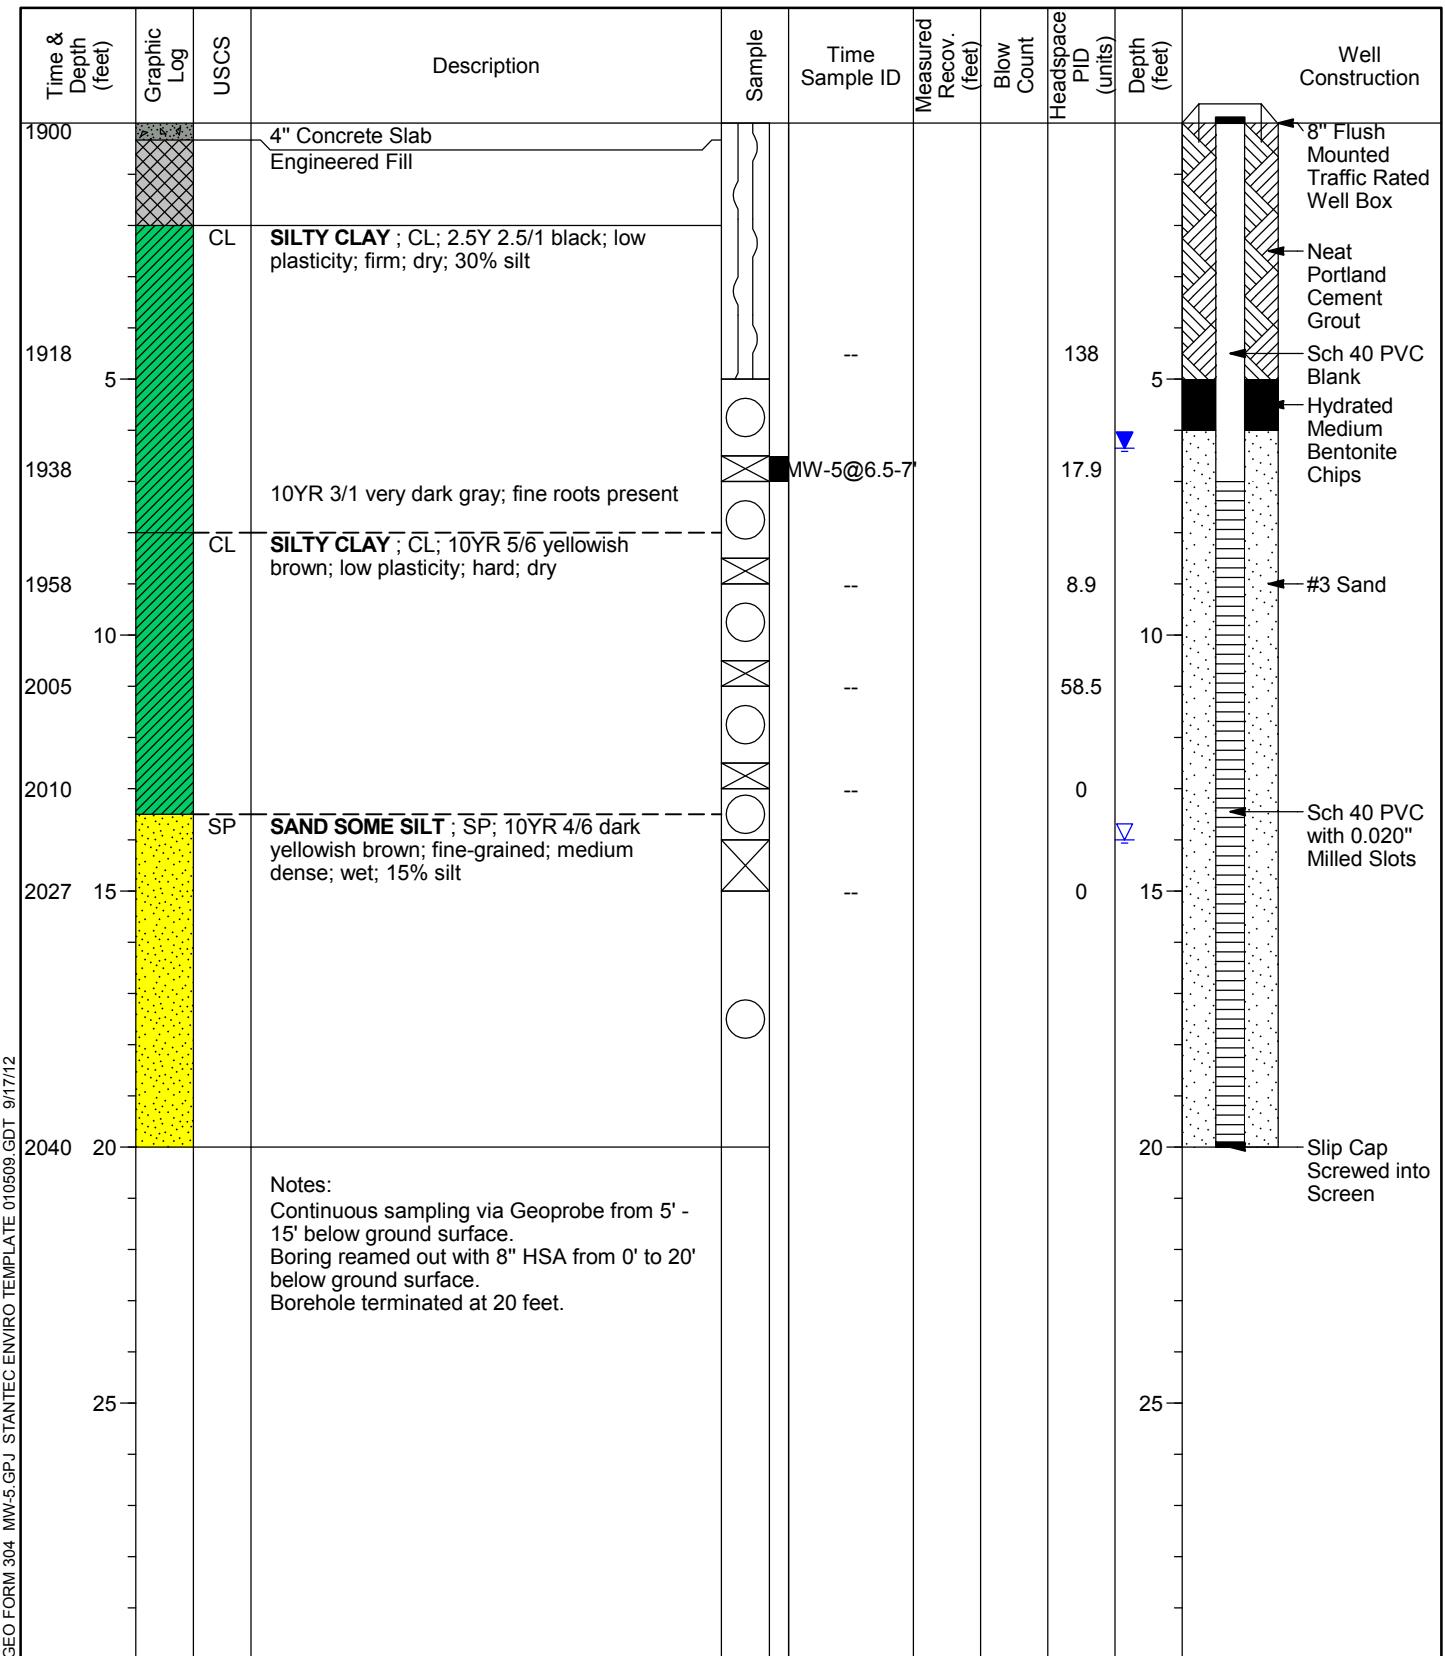

Section 15 – Further Information

The information contained in this document is the best available to the supplier at the time of writing, but is provided without warranty of any kind. Some possible hazards have been determined by analogy to similar classes of material. The items in this document are subject to change and clarification as more information become available.

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

⊗	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 720-43926-1

Revised Report on 9/19/12

Comments

No additional comments.

Receipt

The samples were received on 8/14/2012 7:08 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.2° C.

GC/MS VOA

No other analytical or quality issues were noted.

GC/MS Semi VOA

No analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

Method(s) 8015B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 119074 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other analytical or quality issues were noted.

Metals

No other analytical or quality issues were noted.

General Chemistry

Method(s) 9071B: Insufficient sample volume was available to perform batch matrix spike/matrix spike duplicate (MS/MSD) associated with batch 46801. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method(s) 9071B: Analysis for Hexane Extractable Material (HEM) was performed for the following sample(s): EX-1 (720-43926-1), EX-2 (720-43926-2), EX-3 (720-43926-3), EX-4 (720-43926-4). Since the HEM result(s) was below the reporting limit (RL), the result(s) for Silica Gel Treated - Hexane Extractable Material (SGT-HEM) was reported as a non-detect. All HEM quality control criteria were met.

No other analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

Subject: Goodyear Castro Valley - Additional Analytes Requested

Importance: High

Good Morning Afsaneh,

The landfill is requiring we provide them with additional analytes. Can you please run a composite of the four soil samples submitted on August 13, 2012 (EX-1 through EX-4) for LUFT 5 Metals on standard TAT?

Thank you,

Please note name change

Subject: Goodyear Castro Valley - Additional Analytes
Attachments: Rev COC 43958.pdf; REV COC 081312.pdf

Good Morning Afsaneh,

Attached are revised COCs for the samples submitted for the Goodyear Castro Valley Site on 8/13 and 8/14. Please add a "COMP-1" and make a composite of the four soil samples (EX-1 through EX-4) and analyze it for LUFT F Metals.

Also for the samples submitted on 8/13 and 8/14, please analyze all samples for TPH-DRO with and without silica gel cleanup.

Thank you,

Please note name change

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

⊗	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments

No additional comments.

Receipt

The samples were received on 8/15/2012 7:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7° C.

GC/MS VOA

No analytical or quality issues were noted.

GC/MS Semi VOA

Method(s) 8270C: The following sample(s) was diluted due to the abundance of non-target analytes: SP-RED2-COMP (720-43954-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270C: The following sample(s) was diluted due to the abundance of non-target analytes: EX-5 (720-43958-1), EX-6 (720-43958-2), EX-7 (720-43958-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270C: Internal standard responses were outside of acceptance limits for the following sample(s): EX-6 (720-43958-2), EX-7 (720-43958-3). The sample(s) shows evidence of matrix interference.

Method(s) 8270C: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-5 (720-43958-1), EX-6 (720-43958-2).

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-5 (720-43958-1), EX-6 (720-43958-2), EX-7 (720-43958-3).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-5 (720-43958-1), EX-6 (720-43958-2), EX-7 (720-43958-3).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-6 (720-43958-2), EX-7 (720-43958-3).

No other analytical or quality issues were noted.

Metals

No analytical or quality issues were noted.

General Chemistry

Method(s) 9071B: Insufficient sample volume was available to perform batch matrix spike/matrix spike duplicate (MS/MSD) associated with batch 46801. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

No other analytical or quality issues were noted.

Attachments: Rev COC 43958.pdf; REV COC 081312.pdf

3

Good Morning Afsaneh,

4

Attached are revised COCs for the samples submitted for the Goodyear Castro Valley Site on 8/13 and 8/14. Please add a "COMP-1" and make a composite of the four soil samples (EX-1 through EX-4) and analyze it for LUFT F Metals.

5

Also for the samples submitted on 8/13 and 8/14, please analyze all samples for TPH-DRO with and without silica gel cleanup.

6

Thank you,

Please note name change

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits
X	Surrogate is outside control limits

General Chemistry

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

☀	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 720-44003-1

Comments

No additional comments.

Receipt

The sample was received on 8/16/2012 6:56 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7° C.

GC/MS VOA

No analytical or quality issues were noted.

GC/MS Semi VOA

Method(s) 8270C: Surrogate recovery for the following sample(s) was outside the upper control limit: MW-5@6.5-7 (720-44003-1). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: LGB10-S0.0 (720-44011-14).

No other analytical or quality issues were noted.

Metals

No other analytical or quality issues were noted.

General Chemistry

Method(s) 9071B: Analysis for Hexane Extractable Material (HEM) was performed for the following sample(s): MW-5@6.5-7 (720-44003-1). Since the HEM result(s) was below the reporting limit (RL), the result(s) for Silica Gel Treated - Hexane Extractable Material (SGT-HEM) was reported as a non-detect. All HEM quality control criteria were met.

No other analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

To assist us in using the proper analytical methods, is
this work being conducted for regulatory purposes?

State in which sampling occurred _____

Compliance Monitoring? Yes No

Enforcement Action? Yes No

Report To: Alicia Falk

Invoice To: Karen Burlingame Goodyear Dept. 110F 1144 E. Market St. Akron, OH 44136-0001

Invoice email: karen.burlingame@goodyear.com

Territory ID: Former Goodyear DEX# 9578, 3430 Castro Valley Boulevard, Castro Valley, CA

Project No & ID: 185702561

Sample ID	Date Sampled	Time Sampled	No. of Containers Shipped	Preservative	Matrix	Analyze For:		RUSH TAT (Pre-Schedule)	RUSH Due Date	REMARKS	
						HNO ₃ (Red Label)	HCl (Blue Label)	NaOH (Orange Label)	H ₂ SO ₄ , Plastic (Yellow Label)	H ₂ SO ₄ , Glass (Yellow Label)	
MW-5 8/6.5-7	8/18/12	1938	1 X	Grab	Composite	X	X	X	X	X	8015 - TPH-DRO (C10 to C28)
				Field Filtered							8015B - TPH-GRO
				HNO ₃ (Red Label)	HCl (Blue Label)						9071B - TRPH
				NaOH (Orange Label)	NaOH (Orange Label)						8260B - BTEX, MTBE, EDC, and EDB
				H ₂ SO ₄ , Plastic (Yellow Label)	H ₂ SO ₄ , Plastic (Yellow Label)						8270C - SVOCs
				H ₂ SO ₄ , Glass (Yellow Label)	H ₂ SO ₄ , Glass (Yellow Label)						6010B - Lead
				None (Black Label)	None (Black Label)						8015 - TPH-DRO (C10 to C28) with Silica Gel Cleanup
				Other (Specify)	Other (Specify)						
				Groundwater	Soil						
				Other (specify)	Other (specify)						

Special Instructions: **A copy of the chain of custody must accompany each invoice to Goodyear for payment !!!**
Detection limits (in ug/l) for TPH-DRO/ORO must not exceed 100 ug/l.

EDF REQUIRED GLOBAL ID = T0600101801 SEND ANALYTICAL REPORTS TO alicia.falk@stantec.com

Laboratory Comments:
Temperature Upon Receipt: Y N
Sample Containers Intact: Y N

VOCs Free of Headspace? Y N

** Level 4 Deliverables is a Full CLP like data package
there is a surcharge on all Level 4 data packages.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

⊗	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments

No additional comments.

Receipt

The samples were received on 8/17/2012 6:58 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7° C.

GC/MS VOA

No analytical or quality issues were noted.

GC/MS Semi VOA

Method(s) 8270C: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for batch #119817 exceeded control limits for the following analyte(s): Benzoic acid. Benzoic acid has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. <<Add if qualifies>> Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270C: The following sample(s) was diluted due to the abundance of non-target analytes: EX-10 (720-44028-3), EX-11 (720-44028-4), EX-12 (720-44028-5), EX-13 (720-44028-6), EX-8 (720-44028-1), EX-9 (720-44028-2). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-10 (720-44028-3), EX-11 (720-44028-4), EX-12 (720-44028-5), EX-8 (720-44028-1), EX-9 (720-44028-2).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-10 (720-44028-3), EX-11 (720-44028-4), EX-12 (720-44028-5), EX-8 (720-44028-1), EX-9 (720-44028-2).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: (720-44049-2 MS), (720-44049-2 MSD), EX-15 (720-44049-2).

No other analytical or quality issues were noted.

Metals

No analytical or quality issues were noted.

General Chemistry

Method(s) 9071B: Analysis for Hexane Extractable Material (HEM) was performed for the following sample(s): EX-13 (720-44028-6). Since the HEM result(s) was below the reporting limit (RL), the result(s) for Silica Gel Treated - Hexane Extractable Material (SGT-HEM) was reported as a non-detect. All HEM quality control criteria were met.

Method(s) 9071B: Analysis for Hexane Extractable Material (HEM) was performed for the following sample(s): MW-1 (440-21060-1). Since the HEM result(s) was below the reporting limit (RL), the result(s) for Silica Gel Treated - Hexane Extractable Material (SGT-HEM) was reported as a non-detect. All HEM quality control criteria were met.

No other analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits

GC Semi VOA

Qualifier	Qualifier Description
F	MS or MSD exceeds the control limits
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
干	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments

No additional comments.

Receipt

The samples were received on 8/20/2012 10:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

GC/MS VOA

No analytical or quality issues were noted.

GC/MS Semi VOA

Method(s) 8270C: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for batch #119817 exceeded control limits for the following analyte(s): Benzoic acid. Benzoic acid has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. <<Add if qualifies>> Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270C: The following sample(s) was diluted due to the abundance of non-target analytes: EX-15 (720-44049-2), EX-18 (720-44049-5). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-18 (720-44049-5).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: (720-44049-2 MS), (720-44049-2 MSD), EX-15 (720-44049-2), EX-18 (720-44049-5).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-15 (720-44049-2).

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-18 (720-44049-5).

No other analytical or quality issues were noted.

Metals

No analytical or quality issues were noted.

General Chemistry

Method(s) 9071B: Analysis for Hexane Extractable Material (HEM) was performed for the following sample(s): EX-14 (720-44049-1), EX-16 (720-44049-3), EX-17 (720-44049-4), EX-19 (720-44049-6), TB-2 (440-21478-1). Since the HEM result(s) was below the reporting limit (RL), the result(s) for Silica Gel Treated - Hexane Extractable Material (SGT-HEM) was reported as a non-detect. All HEM quality control criteria were met.

No other analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

⊗	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments

No additional comments.

Receipt

The sample was received on 8/20/2012 1:55 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

GC/MS VOA

No analytical or quality issues were noted.

GC/MS Semi VOA

Method(s) 8270C: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for batch #119817 exceeded control limits for the following analyte(s): Benzoic acid. Benzoic acid has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. <<Add if qualifies>> Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method(s) 8270C: The following sample(s) was diluted due to the abundance of non-target analytes: EX-20 (720-44050-1). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-20 (720-44050-1).

Method(s) 8015B: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch 119655 was outside control limits. Non-homogeneity of the sample matrix is suspected. <<INCLUDE IF APPLICABLE>> The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance criteria.

Method(s) 8015B: Due to the level of dilution required for the following sample(s), surrogate recoveries are not reported: EX-20 (720-44050-1).

No other analytical or quality issues were noted.

Metals

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) precision for prep batch 119483 was outside control limits. Non-homogeneity of the sample matrix is suspected. <<INCLUDE IF APPLICABLE>> The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance criteria.

Method(s) 6010B: The method blank for preparation batch 119483 contained Pb above the reporting limit (RL). The associated sample(s) contained detect for this analyte at concentrations greater than 10X the value found in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

General Chemistry

No analytical or quality issues were noted.

Organic Prep

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

⊗	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 720-44097-1

Comments

No additional comments.

Receipt

The samples were received on 8/21/2012 4:21 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.4° C and 2.8° C.

Insufficient sample volume was provided for the TAL-SF-TB (Trip Blanks) for all analyses except volatiles (TPH-GRO+ 8260B-BTEX,MTBE,EDC,EDB). Received only 2-40ml Hcl vials for TAL-SF-TB.

GC/MS VOA

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch #119576 exceeded control limits for the following analytes: 1,1,1-TCA. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other analytical or quality issues were noted.

GC/MS Semi VOA

No analytical or quality issues were noted.

GC Semi VOA

No analytical or quality issues were noted.

Metals

No analytical or quality issues were noted.

General Chemistry

Method(s) 1664A: The method blank (MB) and laboratory control standard (LCS) analyzed in batch 160440 were in control, but were analyzed as HEM, rather than SGT-HEM, since the sample itself was non-detect for HEM and did not require the silica gel treatment. MW-1 (720-44097-1), MW-2 (720-44097-2), MW-4 (720-44097-3), MW-5 (720-44097-4)

The MB, at 0.4 mg/L, was less than the RL of 5 mg/L, and the LCS recovery was 92% and was within the 78-114% limit. The true value for the LCS is 40 mg/L and 36.8 mg/L was recovered for the LCS.

No other analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	False	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	False	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
