Hi Paresh,

I understand you may not work much on this site now: please forward this request to whomever has taken over.

For RO# 482 (7850 Amador Valley Blvd, Dublin): CRA proposes performing silica gel cleanup on all TPHd by 8015 samples to isolate the petroleum hydrocarbon compounds. Currently all samples are analyzed for TPHd by 8015 without silica gel cleanup. Without silica gel cleanup, 8015 results can include non-hydrocarbon compounds which bias the results high. We propose performing a silica gel column cleanup method as opposed to the "shake" method due to the technical superiority of the column method. Do you approve these proposed changes?

Thank you,

Ian Hull
