

Khatri, Paresh, Env. Health

Subject: RO0000482; UNOCAL #7176
Entry Type: Phone call
Start: Thu 5/7/2009 10:39 AM
End: Thu 5/7/2009 10:39 AM
Duration: 0 hours

Telephone conference

Attendees: John Reay (Delta Consultants), Terry Grayson (Conoco Phillips), Paresh Khatri (ACEH).

John and Terry called to discuss the site in response to our May 1, 2009 correspondence. ACEH requested source area characterization and site cleanup goals. Delta submitted soil and groundwater data to demonstrate that the site is characterized and should be evaluated for closure. I agreed that the residual hydrocarbon concentrations at the site are low, but stated that the former source area may be lateral assessed, but the vertical characterization is unknown at this time. ACEH is concerned because the site overlies an active drinking water basin and the lateral extent of contamination in the former source area is unknown and the 2nd water bearing zone has not been assessed. Delta proposed a CPT boring down-gradient of the UST pit near U-1 to address ACEH's concerns. A work plan will be submitted by the end of June. Pending the analytical data, the site may be evaluated for closure.
