Fuel Leak Case RO0000484
Cambria Project #230-0116

Dear Mr. Hwang:

On behalf of Mr. Bo K. Gin, Cambria Environmental Technology, Inc. is submitting this *Second Quarter 2006 Monitoring Report* for the subject site. This report describes second quarter 2006 activities and results as well as anticipated third quarter 2006 activities.

If you have any questions or comments regarding this report, please contact Matthew Meyers at (510) 420-3314 or Mark Jonas at (510) 420-3307.

Sincerely,
Cambria Environmental Technology, Inc.

Matthew A. Meyers
Project Geologist

Cambria Project #230-0116**

July 14, 2006

INTRODUCTION

On behalf of Mr. Bo K. Gin, Cambria Environmental Technology, Inc. (Cambria) is submitting this *Second Quarter 2006 Monitoring Report* for the subject site. Presented below are the second quarter 2006 groundwater monitoring activities and results and the anticipated third quarter 2006 activities.

Figure 1 presents recent joint monitoring groundwater elevations and selected hydrochemical data. Table 1 presents recent and historic groundwater level measurements and elevations, and hydrochemical data. Appendix A contains field data sheets for this monitoring event. Appendix B presents the recent laboratory analytical report. Appendix C includes time-series plots with benzene and methyl tertiary butyl ether (MTBE) concentrations, and groundwater elevations. Appendix D provides monitoring groundwater elevations and analytical data for the neighboring former Shell Station located at 726 Harrison Street, in Oakland, California.

SECOND QUARTER 2006 ACTIVITIES

Monitoring Activities

Field Activities: On April 12, 2006, Muskan Environmental Sampling (MES) conducted quarterly monitoring and sampling activities. MES measured well water levels in monitoring wells MW-1 through MW-7 (Figure 1). MES collected groundwater samples from monitoring wells MW-1, MW-2, MW-4, MW-6, and MW-7. The groundwater depth measurements have been submitted to the GeoTracker database.

Prior to groundwater sampling, groundwater levels were measured in all monitoring wells. Each monitoring well was then purged before sampling. MES purged at least three well-casing volumes of groundwater from each monitoring well. Field measurements of pH, specific conductance, and temperature of purged groundwater were measured after the extraction of each successive casing volume. Well purging continued until consecutive pH, specific conductance, and temperature measurements appeared to stabilize. Field measurements, purge volumes, and sample collection data were recorded on field sampling data forms, presented in Appendix A.

Groundwater samples were collected using new disposable bailers, decanted into appropriate sampling containers supplied by the analytical laboratory. Samples were labeled, placed in protective foam sleeves, stored on crushed, water-based ice at or below 4 degrees Celsius and transported under a chain-of-custody (COC) to the laboratory. The COC used for this monitoring event is provided in Appendix B.

Sample Analyses: Groundwater samples were analyzed by McCampbell Analytical, Inc. of Pacheco, California, a California-certified laboratory. All groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by modified United States Environmental Protection Agency (EPA) Method SW8015C; benzene, toluene, ethylbenzene, and total xylenes (BTEX) and MTBE by EPA Method SW8021B; and all samples were analyzed for MTBE by EPA Method SW8260B. The analytical laboratory report is included in Appendix B. Groundwater analytical results are provided on Table 1 and summarized on Figure 1. Groundwater analytical results have been submitted to the GeoTracker database.

Monitoring Results

Groundwater Flow Direction and Gradient: Based on depth-to-water measurements collected during the monitoring event on April 12, 2006, groundwater appears to flow towards the south-southwest with an apparent gradient of 0.015 feet per foot (Figure 1). The gradient and flow direction are consistent with historical data. Depth-to-water and groundwater elevation data for the site are presented in Table 1.

Hydrocarbon Distribution in Groundwater: Hydrocarbons were detected in down-gradient well MW-1, source area well MW-2, and up-gradient well MW-4 during this sampling event (Table 1). The highest TPHg, toluene, ethylbenzene, and xylenes concentrations were detected in monitoring well MW-2 at 43,000 micrograms per liter ($\mu\text{g/L}$), 7,800 $\mu\text{g/L}$, 1,300 $\mu\text{g/L}$, and 5,200 $\mu\text{g/L}$, respectively. Benzene was detected in well MW-2 at 1,800 $\mu\text{g/L}$. TPHg and BTEX concentrations were detected in well MW-1 at 7,200 $\mu\text{g/L}$, 2,600 $\mu\text{g/L}$, 110 $\mu\text{g/L}$, 350 $\mu\text{g/L}$, and 320 $\mu\text{g/L}$, respectively.

TPHg and BTEX concentrations remain elevated in upgradient well MW-4 at 940 $\mu\text{g/L}$, 150 $\mu\text{g/L}$, 12 $\mu\text{g/L}$, 7.6 $\mu\text{g/L}$, and 12 $\mu\text{g/L}$, respectively. No hydrocarbons, excluding MTBE (see below), were detected in down/cross-gradient well MW-6 or cross-gradient well MW-7. Analytical results are presented in Figure 1, Table 1, and Appendix B.

Significantly higher elevated concentrations of TPHg and BTEX are present up-gradient of the site, on the adjacent property (see Figure 1 and Appendix D).

MTBE Distribution in Groundwater: MTBE was detected in down-gradient well MW-1, source area well MW-2, up-gradient well MW-4, and cross-gradient well MW-7 during this sampling event. No MTBE was detected above laboratory detection limits in well MW-6.

The highest on-site MTBE concentration was detected in source area well MW-2 at 4,900 µg/L. MTBE concentrations in wells MW-1, MW-4, and MW-7 were 4,000 µg/L, 3,300 µg/L, 2.0 µg/L, respectively.

Significantly higher concentrations of MTBE were identified in wells located up-gradient, on the adjacent property. The highest MTBE concentration was detected in monitoring well MW-5, on the adjacent property, at 21,000 µg/L. This offsite well is located approximately 10 feet up-gradient from onsite well MW-4 (Figure 1).

ANTICIPATED THIRD QUARTER 2006 ACTIVITIES

Monitoring Activities

During third quarter 2006, Cambria will measure water levels and collect groundwater samples from monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, and MW-7. Pursuant to ACHCSA's letter dated February 25, 2003, the well sampling schedule was revised so that wells MW-1, MW-2, and MW-4 are sampled on a quarterly basis and wells MW-3, MW-5, MW-6, and MW-7 are sampled on a semi-annual basis during the first and third quarters. Groundwater samples will be analyzed for TPHg by EPA Method SW8015C, BTEX, and MTBE by EPA Method SW8021B and by EPA Method SW8260B. Cambria will prepare a groundwater monitoring report summarizing the monitoring activities and results.

Closure Request

Based on the decreasing concentrations, the offsite source, and a stable plume confirmation, Cambria will begin preparation of a Closure Request for this low risk groundwater site. The Closure Request is anticipated to be completed during the third or fourth quarter of 2006.

ATTACHMENTS:

Figure 1 – Groundwater Elevation Contour and Hydrocarbon Concentration Map

Table 1 – Groundwater Elevation and Analytical Data

Appendix A – Groundwater Monitoring Field Data Sheets

Appendix B – Laboratory Analytical Report

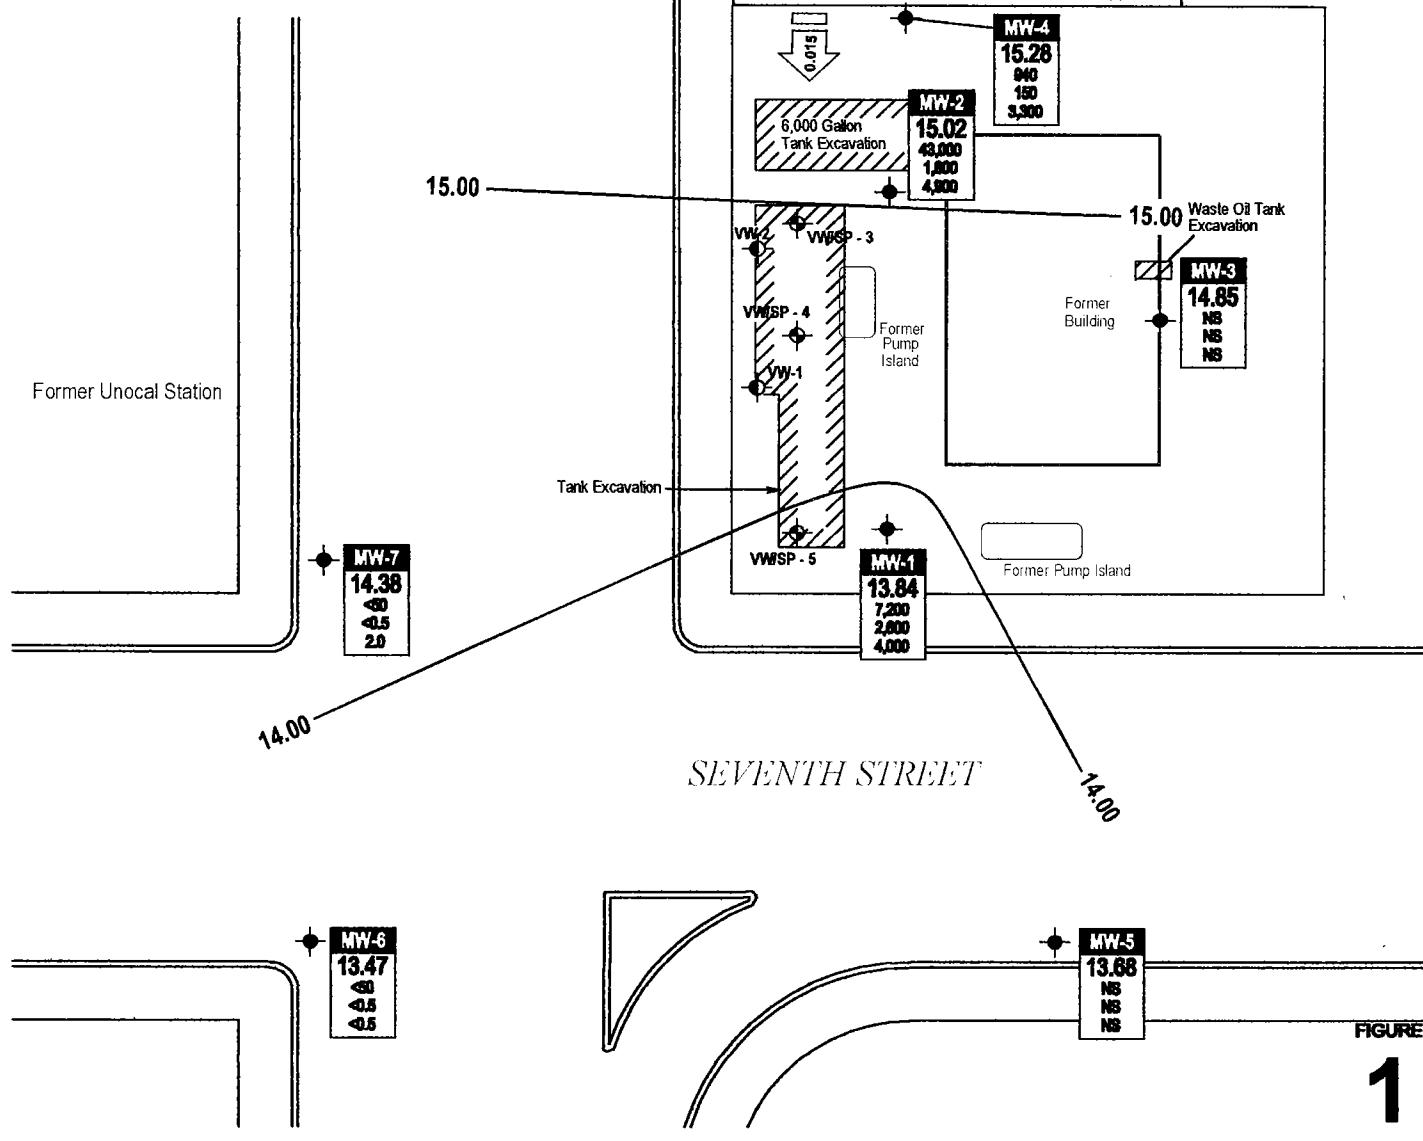

Appendix C – Benzene and MTBE Concentration Graphs

Abbreviations and Analyses:

TOC = Top of casing elevation, measured in feet, relative to mean sea level
 ft = Measured in feet
 ft-msl = Elevation in feet relative to mean sea level
 TPHg = Total petroleum hydrocarbons as gasoline by modified EPA Method SW8015C
 Benzene, ethylbenzene, toluene and xylenes by EPA Method SW8021B.
 MTBE = Methyl tertiary butyl ether by EPA Method SW8021B and/or SW8260B.
 $\mu\text{g/L}$ = Micrograms per liter
 - = Not sampled, not analyzed, or not applicable
 ND<0.5 = Not Detected (ND) above laboratory detection limit.
 Data prior to 12/16/94 provided by previous consultant.
 Wells were re-surveyed on October 27, 2003 to City of Oakland Benchmark 25A.

Analytical Laboratory Notes:

a = "unmodified or weakly modified gasoline is significant"
 b = "heavier gasoline range compounds are significant"
 c = "lighter gasoline range compounds are significant"
 d = "isolated peaks are present"
 f = "hydrocarbons with no recognizable patterns are present"
 g = "lighter than water immiscible sheen is present"
 h = "lighter than water immiscible sheen/product is present"
 i = "sample contains greater than ~1 vol. % sediment"
 j = "sample was diluted due to high organic content"
 m = "no recognizable pattern"

Cambria Env. Technology 5900 Hollis St, Suite A Emeryville, CA 94608	Client Project ID: #230-0116; BoGin	Date Sampled: 04/12/06
		Date Received: 04/13/06
	Client Contact: Matt Meyers	Date Reported: 04/18/06
	Client P.O.:	Date Completed: 04/18/06

WorkOrder: 0604217

April 18, 2006

Dear Matt:

Enclosed are:

- 1). the results of 5 analyzed samples from your #230-0116; BoGin project,
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Best regards,

Angela Rydelius, Lab Manager

Emeryville, CA 94608	Client Contact: Matt Meyers	Date Extracted: 04/14/06-04/15/06
	Client P.O.:	Date Analyzed: 04/14/06-04/15/06

Gasoline Range (C6-C12) Volatile Hydrocarbons as Gasoline with BTEX and MTBE*

Extraction method: SW5030B

Analytical methods: SW8021B/8015Cm

Work Order: 0604217

* water and vapor samples and all TCLP & SPLP extracts are reported in ug/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples in mg/L.

cluttered chromatogram; sample peak coelutes with surrogate peak.

+The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation: a) unmodified or weakly modified gasoline is significant; b) heavier gasoline range compounds are significant(aged gasoline?); c) lighter gasoline range compounds (the most mobile fraction) are significant; d) gasoline range compounds having broad chromatographic peaks are significant; biologically altered gasoline?; e) TPH pattern that does not appear to be derived from gasoline (stoddard solvent / mineral spirit?); f) one to a few isolated non-target peaks present; g) strongly aged gasoline or diesel range compounds are significant; h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) reporting limit raised due to high MTBE content; k) TPH pattern that does not appear to be derived from gasoline (aviation gas). m) no recognizable pattern; n) TPH(g) range non-target isolated peaks subtracted out of the TPH(g) concentration at the client's request.

0604217-001A	4/12/06 4:25 PM	4/14/06	4/14/06 1:27 AM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

^E TPH(btex) = sum of BTEX areas from the FID.

cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not applicable or not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.
