RE: Former Exxon RAS #7-3006/720 High Street, Oakland, California.

Dear Mr. Gholami:

Attached for your review and comment is a copy of the letter report entitled *Comparison of Environmental Screening Levels and Work Plan for Supplemental Evaluation of Soil and Groundwater*, dated December 9, 2004, for the above-referenced site. The report was prepared by Environmental Resolutions, Inc. (ERI) of Petaluma, California, and details evaluation activities for the subject site.

Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached report is true and correct.

If you have any questions or comments, please contact me at 510.547.8196.

Sincerely,

A handwritten signature in black ink, appearing to read "JCS Sedlachek".

Jennifer C. Sedlachek
Project Manager

Attachment: ERI's Comparison of Environmental Screening Levels and Work Plan for Supplemental Evaluation of Soil and Groundwater, dated December 9, 2004.

Oakland, California 94611

Subject: Comparison of Environmental Screening Levels and Work Plan for Supplemental Evaluation of Soil and Groundwater, Former Exxon Service Station 7-3006, 720 High Street, Oakland, California.

Ms. Sedlachek:

At the request of ExxonMobil Oil Corporation (ExxonMobil), Environmental Resolutions, Inc. (ERI) conducts environmental assessment activities at the subject site. In response to the October 8, 2004 meeting between ExxonMobil; ERI; Mr. Amir Gholami of Alameda County Health Agency, Department of Environmental Health (the County); and Mr. Mo Mashhoon, the current property owner, ERI has performed a comparison of current concentrations of residual and dissolved hydrocarbons to the environmental screening levels (ESLs) and prepared this work plan for supplemental evaluation of soil and groundwater. The purpose of the work is to obtain current groundwater and soil data, evaluate natural attenuation potential for the site, and further evaluate the hydrostratigraphy beneath and in the vicinity of the site. This data will be used to develop a site conceptual model for the site and to evaluate whether the need for additional assessment or active remediation is warranted to achieve case closure.

BACKGROUND

The location of the subject site is shown on the Site Vicinity Map (Plate 1). The locations of the former and current underground storage tanks (USTs), dispenser islands, groundwater monitoring wells, and select site features of the subject site are shown on the Generalized Site Plan (Plate 2). Properties in the vicinity of the site are occupied by commercial properties.

Based on the cumulative results of groundwater monitoring and sampling, the groundwater flow direction is predominantly towards the southwest with an average hydraulic gradient of 0.015, as shown on the groundwater flow direction rose diagram (Plate 3). Depth to groundwater beneath the site has ranged from 4 to 11 feet below ground surface (bgs). Cumulative results of groundwater monitoring and sampling events are provided in Tables 1A and 1B. Cumulative results of groundwater monitoring and sampling from the previous consultant is provided in Attachment A.

ExxonMobil's remedial efforts at the site have included operation of a groundwater extraction and treatment (GET) system from January 1995 to December 1998, operation of an air sparge/soil vapor extraction (AS/SVE) system from August 1996 to July 1999, and operation of a biosparging system from July 2001 to June 2003.

DISTRIBUTION OF RESIDUAL AND DISSOLVED HYDROCARBONS

ERI performed a groundwater monitoring and sampling event during the fourth quarter 2004 to obtain current concentrations of dissolved hydrocarbons beneath the subject site. Cumulative results of groundwater monitoring and sampling, including results of the fourth quarter 2004 monitoring and sampling event, are provided in Table 1A, Table 1B, and Attachment A. In addition, during the fourth quarter 2004 groundwater monitoring and sampling event, ERI collected groundwater samples for analysis

of natural attenuation indicators, and monitored and recorded physical parameters and natural attenuation indicators in the field to evaluate whether existing subsurface conditions are feasible for support of natural attenuation of petroleum hydrocarbon at the site. The laboratory analysis report and Chain-of-Custody record for the groundwater samples collected for analysis of natural attenuation indicators are included as Attachment B. The results of laboratory analysis, recorded physical parameters, and recorded natural attenuation indicators are presented in Table 2.

Cumulative results of soil samples collected during previous environmental activities are summarized in Table 3. Soil sample locations are shown on Plate 4. Based on review of the cumulative results of soil samples, residual hydrocarbons in soil appear to be concentrated in the southern portion of the site in the vicinity of the former USTs, on the southwestern portion of the site adjacent to Coliseum Way and on the northwestern portion of the site in the vicinity of the former used-oil UST. However, all soil samples collected beneath the site occurred prior to the operation of the soil and groundwater remediation systems. Therefore, pre-remediation concentrations of residual hydrocarbons and related constituents in soil may not be representative of concentrations of residual hydrocarbons in soil at the present time.

Dissolved hydrocarbons in groundwater appear to be concentrated in the vicinity of the former USTs in well MW6. In addition, dissolved total petroleum hydrocarbons as gasoline (TPHg), total petroleum hydrocarbons as diesel (TPHd), and methyl tertiary butyl ether (MTBE) are also present downgradient of the former USTs in wells MW3 and MW1. Isoconcentration maps of dissolved TPHd, TPHg, MTBE, benzene, toluene, ethylbenzene, and total xylenes detected in groundwater samples collected during the fourth quarter 2004 groundwater monitoring and sampling event are provided in Attachment C.

COMPARISON OF RESIDUAL AND DISSOLVED CONCENTRATIONS TO ENVIRONMENTAL SCREENING LEVELS

ERI compared current concentrations of dissolved hydrocarbons, and the maximum reported concentrations of residual hydrocarbons, to the ESLs issued by the California Regional Water Quality Control Board, San Francisco Bay Region (Regional Board, 2003). ERI compared concentrations of residual and dissolved hydrocarbons to ESLs for commercial land use and residential land use. Properties in the vicinity of the site are occupied by commercial developments. Therefore, commercial land use ESLs are most applicable to this site.

Dissolved Concentrations

ERI compared the maximum concentrations of TPHg; TPHd; benzene, toluene, ethylbenzene, and total xylenes (BTEX); and MTBE detected in monitoring wells associated with the subject site during the November 2, 2004 monitoring and sampling event to select ESLs for groundwater sources. ERI compared the maximum dissolved concentrations to ESLs for indoor air impact for commercial land use, estuary aquatic habitat goal for surface water, the groundwater ceiling value for groundwater that is not a current or potential drinking water resource, and indoor air impact for residential land use. A summary of the maximum concentrations and ESL for groundwater sources is provided in Table 4.

The maximum concentrations detected in groundwater during the November 2, 2004 sampling event exceed the following ESLs: estuary aquatic habitat goal for surface water for benzene, total xylenes, TPHg, and TPHd; the ceiling value where groundwater is not a current or potential drinking water resource for TPHd; and indoor air impact for residential land use for benzene. The isoconcentration maps for TPHd, TPHg, MTBE, and BTEX (Attachment C) also show select ESLs for groundwater sources.

Residual Concentrations

ERI compared the maximum reported concentration of residual TPHg, TPHd, BTEX, and MTBE detected in soil samples collected at the subject site during previous environmental investigations above 10 feet below ground surface (bgs) and below 10 feet bgs to select ESLs for soil sources. ERI compared these concentrations to ESLs for direct exposure to human health for commercial and residential land use;

groundwater protection (soil leaching) non-drinking water resource for commercial and residential land use; and potential indoor air impact for commercial and residential land use. However, all soil samples collected beneath the site occurred prior to the operation of the soil and groundwater remediation systems and, therefore, may not be representative of concentrations of residual hydrocarbons in soil at the present time. A summary of the maximum concentrations and ESLs for soil sources above 10 feet bgs and below 10 feet bgs are provided in Table 5 and Table 6, respectively.

The maximum concentrations detected in soil above 10 feet bgs during previous environmental investigations exceed the following ESLs: direct expose to human health for commercial land use for benzene, ethylbenzene, total xylenes, and TPHg; groundwater protection (soil leaching) non-drinking water resource for commercial land use for BTEX, TPHg, and TPHd; potential indoor air impact for commercial land use for benzene, ethylbenzene, and total xylenes; direct expose to human health for residential land use for benzene, ethylbenzene, total xylenes, TPHg and TPHd; groundwater protection (soil leaching) non-drinking water resource for residential land use for BTEX, TPHg, and TPHd; and potential indoor air impact for residential land use for benzene, ethylbenzene, and total xylenes.

The maximum concentrations detected in soil during previous environmental investigations below 10 feet bgs exceed the following ESLs: direct expose to human health for commercial land use for benzene; groundwater protection (soil leaching) non-drinking water resource for commercial land use for benzene, toluene, total xylenes, and TPHg; potential indoor air impact for commercial land use for benzene and ethylbenzene; direct expose to human health for residential land use for benzene; groundwater protection (soil teaching) non-drinking water resource for residential land use for benzene, toluene, total xylenes, and TPHg; and potential indoor air impact for residential land use for benzene, ethylbenzene, and total xylenes.

WORK PLAN FOR SUPPLEMENTAL EVALUATION OF SOIL AND GROUNDWATER

ERI proposes to advance six on-site direct push soil borings (DP1 through DP6) to evaluate post-remedial soil conditions beneath the subject site and collect groundwater samples from first encountered groundwater. In addition, ERI proposes to advance one on-site and three off-site cone penetrometer test (CPT) borings to evaluate the lateral and vertical extent of dissolved hydrocarbon beneath and downgradient of the subject site and to evaluate the soil stratigraphy.

The scope of the supplemental soil and groundwater investigation is summarized in the following subsections.

Task 1: Pre-Drilling Activities

Prior to drilling activities, ERI will:

- Obtain a drilling permit from the Alameda County Public Works (Public Works).
- Obtain an encroachment permit form the City of Oakland (the City).
- Contact Underground Service Alert (USA) and a private utility locator to identify buried utilities in the vicinity of the proposed drilling.

Task 2: Confirmation Soil Borings and Cone Penetration Test Borings

Prior and during drilling activities, ERI will:

- Clear the borings with an air knife, hand auger, or other appropriate means pursuant to ExxonMobil protocol.

- Obtain the services of a licensed well driller, and observe the advancement of on-site, dual-wall, direct-push soil borings DP1 through DP6 and the advancement of on-site and off-site CPT borings CPT1 through CPT6. The locations of the proposed borings are shown on Plate 5. Borings DP1 through DP6 will be advanced to approximately 12 feet bgs, this depth interval is below the deepest groundwater level recorded at the site, and will allow evaluation of soil within the entire zone of historic fluctuation. Borings CPT1 through CPT6 will be advanced approximately 45 feet bgs.
- Collect continuous soil samples from borings DP1 through DP6, to identify stratigraphy and for laboratory analysis.
- Collect grab groundwater samples from borings DP1 through DP6 from first-encountered groundwater for laboratory analysis, using a bailer through the outer wall of direct-push tools. Collect multiple discreet groundwater samples from borings CPT1 through CPT6 from first-encountered groundwater and from deeper coarse-grained sediment layers, as indicated by the CPT profiles, using a discrete groundwater sampling device, for laboratory analysis. ERI expects groundwater to be encountered between 4 and 11 feet bgs.
- Abandon the borings by grouting to ground surface with neat cement.
- Submit soil and groundwater sample for analysis to TestAmerica, Incorporated. (TestAmerica), a California state-certified laboratory, under Chain-of-Custody protocol. The soil and groundwater samples will be analyzed for TPHg and TPHe using modified EPA Method 8015; benzene, BTEX using EPA Method 8020; and fuel oxygenates MTBE, di-isopropyl ether (DIPE), tertiary amyl methyl ether (TAME), ethyl tertiary butyl ether (ETBE), and tertiary butyl alcohol (TBA); and lead scavengers 1,2-dichloroethane (EDC) and 1,2-dibromomethane (EDB) using EPA Method 8260 B.
- Store drill cuttings on site pending characterization and disposal. ERI will collect one composite soil sample (four brass sleeves) from the soil cuttings for laboratory analysis. Upon receipt of analytical results for the stockpiled soil, ERI will apprise ExxonMobil of disposal options, and coordinate soil disposal at an appropriate disposal facility selected by ExxonMobil. Rinsate generated during decontamination of drilling equipment will be containerized, labeled, and temporarily stored on-site pending disposal.
- Interpret field and laboratory data to evaluate soil and groundwater conditions.

Task 3: Report Preparation

ERI will prepare a report summarizing the supplemental evaluation of soil and groundwater. The report will detail field activities, sample collection, field observations, results of the field investigations, and analytical results for the soil and groundwater samples. ERI will also update the comparison of current concentrations of residual hydrocarbons to the environmental screening levels, using the maximum concentrations of residual hydrocarbons from this investigation. If additional assessment work is warranted, the proposed work will be described in the report. ERI will use cumulative results of environmental investigations at the site and prepare a Site Conceptual Model. The Site Conceptual Model will be submitted under separate cover.

SCHEDULE OF OPERATIONS

ERI is prepared to implement this proposed work upon regulatory approval of this Work Plan and obtaining the appropriate permits.

DOCUMENT DISTRIBUTION

ERI recommends forwarding a copy of this document to:

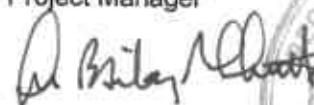

Mr. Amir Gholami
Alameda County Health Care Services Agency

Max	#REF!						
Mean	#REF!						

Notes:

- SUBJ = Results of subjective evaluation, liquid-phase hydrocarbon thickness in feet.
- NLPH = No liquid-phase hydrocarbons present in well.
- TOC = Elevation of top of well casing; relative to mean sea level.
- DTW = Depth to water.
- Elev. = Elevation of groundwater. If liquid-phase hydrocarbons present, elevation adjusted using TOC - [DTW - (PT x 0.8)].
- [] = Amount recovered.
- gal. = Gallons.
- TPHd = Total petroleum hydrocarbons as diesel analyzed using EPA Method 3510/B015 (modified).
- TPHg = Total petroleum hydrocarbons as gasoline analyzed using EPA Method 5030/B015 (modified).
- MTBE = Methyl tertiary butyl ether analyzed using EPA Method 8021B.
- BTEX = Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B.
- TOG = Total oil and grease analyzed using Standard Method 5520.
- EHC_{as} = Extractable Hydrocarbons as Stoddard Solvent analyzed using EPA Method 8015.
- EDB = 1,2-Dibromoethane analyzed using EPA Method 8260B.
- 1,2-DCA = 1,2-Dichloroethane analyzed using EPA Method 8260B.
- TAME = Tertiary amyl methyl ether analyzed using EPA Method 8260B.
- TBA = Tertiary butyl alcohol analyzed using EPA Method 8260B.
- ETBE = Ethyl tertiary butyl ether analyzed using EPA Method 8260B.
- DPE = Di-isopropyl ether analyzed using EPA Method 8260B.
- = Not measured/Not analyzed.
- < = Less than the indicated reporting limit shown by the laboratory.
- a = Peak eluting earlier than benzene, suspected to be MTBE, was present.
- b = Sample containers for TPHg, BTEX, and MTBE were broken in transit.
- c = Chromatogram pattern: unidentified hydrocarbons C6 - C12.
- d = Chromatogram pattern: weathered gasoline C6 - C12.
- e = Chromatogram pattern: weathered gasoline C6 - C12 and unidentified hydrocarbons C6 - C12.
- f = Chromatogram pattern: weathered diesel C9 - C24 and unidentified hydrocarbons C9 - C36.
- g = Chromatogram pattern: unidentified hydrocarbons C9 - C24.
- h = Total petroleum hydrocarbons as diesel analyzed using EPA Method 3510/B015 (modified), with silica gel cleanup.
- j = Well inaccessible.
- k = MTBE analyzed using EPA Method 8260B.
- l = TPHd note: Analyst notes samples resemble paint thinner more than Stoddard Solvent.
- m = Analyte detected in trip blank and/or boiler blank; result is suspect.
- n = Higher reported TPH concentrations in groundwater may be due to different laboratory quantitation procedures.

TABLE 1B
ADDITIONAL CUMULATIVE GROUNDWATER MONITORING AND SAMPLING DATA

Former Exxon Service Station 7-3006
 720 High Street
 Oakland, California
 (Page 13 of 13)

Notes:		
SUBJ	=	Results of subjective evaluation, liquid-phase hydrocarbon thickness in feet.
NLPH	=	No liquid-phase hydrocarbons present in well.
TOC	=	Elevation of top of well casing; relative to mean sea level.
DTW	=	Depth to water.
Elev.	=	Elevation of groundwater. If liquid-phase hydrocarbons present, elevation adjusted using TOC - [DTW - (PT x 0.8)].
[]	=	Amount recovered.
gal.	=	Gallons.
TPHd	=	Total petroleum hydrocarbons as diesel analyzed using EPA Method 3510/8015 (modified).
TPHg	=	Total petroleum hydrocarbons as gasoline analyzed using EPA Method 5030/8015 (modified).
MTBE	=	Methyl tertiary butyl ether analyzed using EPA Method 8021B.
BTEX	=	Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B.
TOG	=	Total oil and grease analyzed using Standard Method 5520.
EHCss	=	Extractable Hydrocarbons as Stoddard Solvent analyzed using EPA Method 8015.
EDB	=	1,2-Dibromoethane analyzed using EPA Method 8260B.
1,2-DCA	=	1,2-Dichloroethane analyzed using EPA Method 8260B.
TAME	=	Tertiary amyl methyl ether analyzed using EPA Method 8260B.
TBA	=	Tertiary butyl alcohol analyzed using EPA Method 8260B.
ETBE	=	Ethyl tertiary butyl ether analyzed using EPA Method 8260B.
DIPE	=	Di-isopropyl ether analyzed using EPA Method 8260B.
—	=	Not measured/Not analyzed.
<	=	Less than the indicated reporting limit shown by the laboratory.
a	=	A peak eluting earlier than benzene, suspected to be MTBE, was present.
b	=	Sample containers for TPHg, BTEX, and MTBE were broken in transit.
c	=	Chromatogram pattern: unidentified hydrocarbons C6 - C12.
d	=	Chromatogram pattern: weathered gasoline C6 - C12.
e	=	Chromatogram pattern: weathered gasoline C6 - C12 and unidentified hydrocarbons C6 - C12.
f	=	Chromatogram pattern: weathered diesel C9 - C24 and unidentified hydrocarbons C9 - C36.
g	=	Chromatogram pattern: unidentified hydrocarbons C9 - C24.
h	=	Total petroleum hydrocarbons as diesel analyzed using EPA Method 3510/8015 (modified), with silica gel cleanup.
j	=	Well inaccessible.
k	=	MTBE analyzed using EPA Method 8260B.
l	=	TPHd note: Analyst notes samples resemble paint thinner more than Stoddard Solvent.
m	=	Analyte detected in trip blank and/or bailer blank; result is suspect.
n	=	Higher reported TPH concentrations in groundwater may be due to different laboratory quantitation procedures.

Notes:

- TOC Elevation of top of well casing; relative to mean sea level.
 DTW Depth to water.
 Elev. Elevation of groundwater surface; relative to mean sea level.
 Nitrate Nitrate as NO₃ analyzed using EPA Method 300.0.
 Sulfate Sulfate as SO₄ analyzed using EPA Method 300.0.
 Ortho-phosphate Phosphate (Ortho) as P analyzed using EPA Method 300.0.
 Nitrogen Nitrogen (Total) analyzed using EPA Method SM 4500-N.
 Phosphorous Phosphorous analyzed using EPA Method 365.3
 Ammonia-Nitrogen Ammonia as N analyzed using EPA Method 350.1.
 Methane Methane as CH₄ analyzed using EPA Method RSK-175 modified.
 Sulfide Sulfide as SO₂ analyzed using EPA Method 376.1.
 TKN Total Kjeldahl Nitrogen analyzed using EPA Method 351.2.
 Carbon dioxide Carbon dioxide as CO₂ analyzed in the field using a CO₂ titration kit.
 Ferrous iron (Fe²⁺) Ferrous iron as Fe analyzed in the field using a Colorimetric analysis kit.
 DO Dissolved oxygen analyzed in the field using a YSI model 55 DO meter.
 ORP Oxidation/reduction potential analyzed in the field using an Orion 250A ORP meter.
 Conductivity Measure of the electrical conductive potential of potassium ions in groundwater analyzed in the field using a Hydac meter.
 Temperature Measure of the average molecular kinetic energy of a substance analyzed in the field using a Hydac meter.
 pH Measure of the amount of hydronium ion in a solution measured in the field using a Hydac meter.
 < Less than the indicated detection limit shown by the laboratory.
 mg/L Milligrams per liter.
 --- Not analyzed/Not sampled.

Notes:

- S-8-B30 = Soil sample-depth-boring number.
- feet bgs = Feet below ground surface.
- mg/kg = Micrograms per kilogram.
- TPHd = Total petroleum hydrocarbons as diesel analyzed using EPA Method 3510/8015 (modified).
- TPHg = Total petroleum hydrocarbons as gasoline analyzed using EPA Method 5030/8015 (modified).
- MTBE = Methyl tertiary butyl ether analyzed using EPA Method 8021B.
- BTEX = Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B.
- = Not measured/Not analyzed.

Table 4
Representative COC Concentrations and ESLs for Groundwater Sources
Former Exxon Service Station 7-3006
720 High Street
Oakland, California

CONSTITUENT OF CONCERN	REPRESENTATIVE CONCENTRATION	Groundwater Screening Levels		Surface Water Screening Levels, Estuary Habitats	Groundwater Ceiling Value
		Residential Land Use	Commercial Land Use		
		ug/L	ug/L	ug/L	ug/L
Benzene	793	530	1,800	46	20,000
Toluene	3.6	500,000	530,000	130	400
Ethylbenzene	178	14,000	47,000	290	300
Total Xylenes	53	150,000	160,000	13	5,300

TABLE 1
CUMULATIVE GROUNDWATER MONITORING AND SAMPLING DATA

Exxon Service Station 7-3006

720 High Street

Oakland, California

(Page 26 of 26)

Well ID # (TOC)	Sampling Date	SUBJ < feet >	DTW feet	Elev.	TPHg < >	B	T	E parts per billion	X	TPHd	VOCs	TOG >
		Maximum Contaminant Levels (DHS)			—	1.0	—	680	1,750	—	—	—
		Drinking Water Action Levels (DHS)			—	—	100	—	—	—	—	—

Notes:

SUBJ	= Results of subjective evaluation, liquid-phase hydrocarbon thickness (HT) in feet	—	= Not Applicable
LPH	= Liquid-phase hydrocarbons present, thickness not measured	<	= Less than the indicated detection limit shown by the laboratory
NLPH	= No liquid phase hydrocarbons present in well	#	= Well monitored but not sampled
TOC	= Elevation of top of well casing; relative to mean sea level	1	= Chloromethane
DTW	= Depth to water	2	= Analyzed for Stoddard Solvent using EPA method 5030/8015.
Elev.	= Elevation of groundwater. If liquid-phase hydrocarbons present, elevation adjusted using TOC - [DTW - (PT x 0.8)].	3	= Additional Analysis on MW-1 - Fecal Coliform Most Probable Number (MPN)/100 ml.
[]	= amount recovered	4	= VOCs Detected using EPA Method 624 - 16,000 ppb Benzene, 480 ppb Toluene, 4,500 ppb Ethylbenzene, 9,900 ppb total Xylenes.
gal.	= gallons		= VOCs Detected using EPA Method 625 - 1,800 ppb Naphthalene, 600 ppb 2-Methylnaphthalene, Bis(2-ethylhexyl) phthalate
c.	= cups		= Stoddard Solution detected in the sample at approximately 320 ppb
TPHg	= Total petroleum hydrocarbons as gasoline analyzed using modified EPA method 5030/8015.	5	= Analyzed for Stoddard Solvent using modified EPA method 5030/8015. Sample chromatogram was not representative of a Stoddard Solvent pattern. Pattern was representative of the heavier hydrocarbons found in a gasoline pattern.
BTEX	= Benzene, Toluene, Ethylbenzene, and total Xylenes analyzed using modified EPA method 5030/8020.	6	= Department of Health Services, State of California, October 1990
TPHd	= Total petroleum hydrocarbons as diesel analyzed using EPA method 3510/8015.	7	
VOCs	= Volatile organic compounds analyzed using EPA method 624.		
TOG	= Total oil and grease analyzed using Standard Method 5520.	DHS	
*	= Analyzed using EPA method 624 (volatile organic compounds).		
**	= See Table 3 for additional Analysis		
NR	= No liquid-phase hydrocarbons removed from well		
NM	= Not Measured		
ND	= Not Detectable		
NA	= Not Analyzed
