Alameda County Health Care Services Agency
Attention Ms. Eva Chu - Hazardous Materials Specialist
1131 Harbor Bay Parkway, Suite 250
Alameda, CA 94502-6577

RE: Former BP Oil Site No. 11120
6400 Dublin Boulevard
Dublin, CA
StID 2095

- MW-7 w/ 2,000 gpm MTBE ↑
• well MW-4 w/ 7000 gpm MTBE ↑
~~Other~~ All wells have only flow to
• ND conc of HC/MTBE.
• check GW flow direction from previous gtrs
• see if RWGAB will close case
or just do annual for MTBE

Dear Ms. Chu:

This letter transmits a Groundwater Monitoring and Sampling Report, dated 12 November 1997. The report summarizes groundwater chemical data obtained since 1992.

The investigation at this site was performed in 1992 to obtain baseline chemical data in support of BP's plans to withdraw from the California market. At that time, no petroleum release(s) were known or suspected to have occurred. Nevertheless, the data confirmed that a release had occurred, and further investigation required by the Alameda County Health Care Services Agency has been undertaken.

BP sold the site to Tosco, the current operator, during 1994. The underground storage tanks were replaced when the station was razed and rebuilt during 1996. It is my understanding that the UST system has been upgraded to comply with 1998 requirements for leak detection and prevention. You may recall that one of the monitoring wells (MW-1) was rendered inaccessible after the new station building was constructed.

The enclosed groundwater monitoring and sampling report includes laboratory data for samples collected on 16 September 1997. With the exception of well MW-4, you will note that aromatic petroleum hydrocarbons were not detected in any of the samples obtained from the monitoring wells. Benzene was detected in a sample obtained from MW-4 at a concentration of 0.80 ug/l.

MTBE concentration data is now shown in Figure 3, replacing the dissolved oxygen measurements shown in past reports. You should note that estimated MTBE concentrations for samples analyzed during 1993 and 1994 are also shown on Table 1 - Summary of Results of Groundwater Sampling. Prior laboratory documentation is appended to the enclosed report; I have no other information regarding the suspected or confirmed presence of MTBE in groundwater other than the data summarized in this report. It is my understanding that

December 4, 1997

Page 2

PACE included MTBE in the gasoline standard used to determine the retention time of various gasoline components, however, MTBE was not included in the calibration standards used to calculate sample concentrations. This is why Pace refers to the MTBE concentrations for samples analyzed during 1993 and 1994 as estimates. You will note that MTBE was reported to be present in samples obtained prior to the sale of the site to Tosco in 1994.

Since the tanks have been replaced, aromatic hydrocarbons are essentially below detectable concentrations, and MTBE concentrations appear to have stabilized, we would like to obtain a finding for "no further action" and a letter of "case closure" sometime in the near future. The monitoring wells were sampled yesterday, and -- if the results are consistent with the data previously reported -- it seems that further monitoring is of dubious utility. Please give me a call at (425) 251-0689 to discuss the disposition of this site.

Sincerely,

Scott Hooton

GROUNDWATER MONITORING AND SAMPLING REPORT

**BP Oil Company Service Station No. 11120
6400 Dublin Boulevard
Dublin, California**

Project No. 10-170-05-002

November 12, 1997

INTRODUCTION

This report presents the results and findings of the September 16, 1997 groundwater monitoring and sampling conducted by Alisto Engineering Group at BP Oil Company Service Station No. 11120, 6400 Dublin Boulevard, Dublin, California. A site vicinity map is shown on Figure 1.

FIELD PROCEDURES

Field activities were performed in accordance with the procedures and guidelines of the Alameda County Health Care Services Agency and the California Regional Water Quality Control Board, San Francisco Bay Region.

Before purging and sampling, the groundwater level in each well was measured from a permanent mark on top of the casing to the nearest 0.01 foot using an electronic sounder. The depth to groundwater and top of casing elevation data were used to calculate the groundwater elevation in each well relative to an arbitrary datum. The survey data and groundwater elevation measurements collected to date are presented in Table 1.

Before sample collection, each well was purged of 3 casing volumes while recording field readings of pH, temperature, electrical conductivity, and dissolved oxygen. Groundwater samples were collected for laboratory analysis by lowering a bottom-fill, disposable bailer to just below the water level in the well. The samples were transferred from the bailer into laboratory-supplied containers. The water sampling field survey forms are presented in Appendix A.

SAMPLING AND ANALYTICAL RESULTS

The results of monitoring and laboratory analysis of the groundwater samples for this and previous quarters are summarized in Table 1. The potentiometric groundwater elevations as interpreted from the results of this monitoring event are shown on Figure 2. The results of groundwater analysis are shown on Figure 3. The laboratory report and chain of custody record are presented in Appendix B.

NOTES:

- (a) Top of casing elevations surveyed to an arbitrary datum.
- (b) Groundwater elevations relative to an arbitrary datum.
- (c) Analysis did not detect total oil and grease and halogenated volatile organic compounds above reported detection limits.
- (d) Well inaccessible.
- (e) A copy of the documentation for this data is included in Appendix C of Alisto report 10-170-05-001.
- (f) Blind duplicate.
- (g) MTBE peak. Refer to documentation for this data in Appendix C of Alisto report 10-170-05-001.
- (h) Travel blank.

September 30, 1997

Mr. Scott Hooton
BP OIL COMPANY
295 SW 41st St, Bldg 13, Ste N
Renton, WA 98055

The following report contains analytical results for samples received at Southern Petroleum Laboratories (SPL) on September 19, 1997. The samples were assigned to Certificate of Analysis No.(s) 9709967 and analyzed for all parameters as listed on the chain of custody.

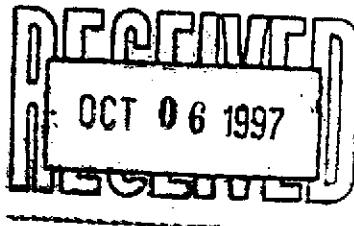

There were no analytical problems encountered with this group of samples and all quality control data was within acceptance limits.

If you have any questions or comments pertaining to this data report, please do not hesitate to contact me. Please reference the above Certificate of Analysis No. during any inquiries.

Again, SPL is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Southern Petroleum Laboratories

A handwritten signature in black ink, appearing to read "Brett VanDelinder".

ENVIRONMENTAL REMEDIATION MANAGEMENT
DATA REVIEW CHECKLIST

BP Site Number: 11120
ERM Contact: H177101
Sampling Date: 09/16/97
Matrix Description: Water
Date Final Report Received: 10/06/97
Laboratory & Location: SPL, Houston, Texas

	Yes	No	N/A
1. Is BP contract release number consistent with analytical report?	X		
2. Was report submitted within the specified timeframe?	X		
3. Does report agree with the COC?	X		
4. Are units consistent with the given matrix?	X		
5. Were any target analytes/compounds detected in blanks (i.e., trip or equipment)?	X		X
6. Are duplicate water samples within 30%?			
7. Are holding times met?	X		
8. Are surrogates within limits using laboratory criteria?	X		
9. Are MS/MSD acceptable using laboratory criteria?	See below		
10. Are LCS results acceptable using laboratory criteria?	X		

Notes: MSD recovery for ethylbenzene value outside
QC range
