RE: Former BP Oil Site No. 11120
6400 Dublin Boulevard
Dublin, CA
StID 2095

Dear Ms. Chu:

This letter transmits a Groundwater Monitoring and Sampling Report, dated 12 January 1997. The report summarizes groundwater chemical data obtained since 1992.

The investigation at this site was performed in 1992 to obtain baseline chemical data in support of BP's plans to withdraw from the California market. At that time, no petroleum release(s) were known or suspected to have occurred. Nevertheless, the data confirmed that a release had occurred, and further investigation required by the Alameda County Health Care Services Agency has been undertaken.

BP sold the site to Tosco, the current operator, during 1994. The underground storage tanks were replaced when the station was razed and rebuilt during 1996. It is my understanding that the UST system has been upgraded to comply with 1998 requirements for leak detection and prevention. You may recall that one of the monitoring wells (MW-1) was rendered inaccessible after the new station building was constructed.

The enclosed groundwater monitoring and sampling report includes laboratory data for samples collected on 3 December 1997. Note that MTBE and petroleum hydrocarbons were not detected in any of the samples obtained from the monitoring wells.

Since the tanks have been replaced, petroleum hydrocarbons are essentially below detectable concentrations, and MTBE concentrations appear to have stabilized, BP is hereby requesting a finding for "no further action" and a letter of "case closure" sometime in the near future. We plan to discontinue groundwater monitoring at this time, and assume that this will be acceptable absent contrary direction from the Alameda County Health Care Services Agency.

Alameda County Health Care Services Agency

January 28, 1998

Page 2

By copy of this letter to Brady Nagle at Alisto Engineering Group, please forward a cost estimate to destroy the groundwater monitoring wells installed at this site.

Please give me a call at (425) 251-0689 to discuss the disposition of this request for case closure.

Sincerely,

Scott Hooton

GROUNDWATER MONITORING AND SAMPLING REPORT

BP Oil Company Service Station No. 11120
6400 Dublin Boulevard
Dublin, California

Project No. 10-170-05-003

January 12, 1998

INTRODUCTION

This report presents the results and findings of the December 3, 1997 groundwater monitoring and sampling conducted by Alisto Engineering Group at BP Oil Company Service Station No. 11120, 6400 Dublin Boulevard, Dublin, California. A site vicinity map is shown on Figure 1.

FIELD PROCEDURES

Field activities were performed in accordance with the procedures and guidelines of the Alameda County Health Care Services Agency and the California Regional Water Quality Control Board, San Francisco Bay Region.

Before purging and sampling, the groundwater level in each well was measured from a permanent mark on top of the casing to the nearest 0.01 foot using an electronic sounder. The depth to groundwater and top of casing elevation data were used to calculate the groundwater elevation in each well relative to an arbitrary datum. The survey data and groundwater elevation measurements collected to date are presented in Table 1.

Before sample collection, each well was purged of 3 casing volumes while recording field readings of pH, temperature, electrical conductivity, and dissolved oxygen. Groundwater samples were collected for laboratory analysis by lowering a bottom-fill, disposable bailer to just below the water level in the well. The samples were transferred from the bailer into laboratory-supplied containers. The water sampling field survey forms are presented in Appendix A.

SAMPLING AND ANALYTICAL RESULTS

The results of monitoring and laboratory analysis of the groundwater samples for this and previous quarters are summarized in Table 1. The potentiometric groundwater elevations as interpreted from the results of this monitoring event are shown on Figure 2. The results of groundwater analysis are normally shown on Figure 3; however, because of non-detectable results, we have omitted the figure. The laboratory report and chain of custody record are presented in Appendix B.

LABORATORY REPORT AND CHAIN OF CUSTODY RECORD

HOUSTON LABORATORY
8880 INTERCHANGE DRIVE
HOUSTON, TEXAS 77054
PHONE (713) 660-0901

December 16, 1997

Mr. Scott Hooton
BP OIL COMPANY
295 SW 41st St, Bldg 13, Ste N
Renton, WA 98055

The following report contains analytical results for samples received at Southern Petroleum Laboratories (SPL) on December 5, 1997. The samples were assigned to Certificate of Analysis No.(s) 9712351 and analyzed for all parameters as listed on the chain of custody.

Any data flag or quality control exception associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s).

If you have any questions or comments pertaining to this data report, please do not hesitate to contact me. Please reference the above Certificate of Analysis No. during any inquiries.

Again, SPL is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

ENVIRONMENTAL RESOURCE MANAGEMENT
DATA REVIEW CHECKLIST

BP Site Number: 11120
ERM Contact: H177101
Sampling Date: 12/3/97
Matrix Description: Water
Date Final Report Received: 12/22/97
Laboratory & Location: SPL, Houston, Texas

	Yes	No	N/A
1. Is BP contract release number consistent with analytical report?	<u>X</u>		
2. Was report submitted within the specified timeframe?	<u>X</u>		
3. Does report agree with the COC?	<u>X</u>		
4. Are units consistent with the given matrix?	<u>X</u>		
5. Were any target analytes/compounds detected in blanks (i.e., trip or equipment)?			<u>X</u>
6. Are duplicate water samples within 30%?	<u>X</u>		
7. Are holding times met?	<u>X</u>		
8. Are surrogates within limits using laboratory criteria?	<u>X</u>		
9. Are MS/MSD acceptable using laboratory criteria?	See Below		
10. Are LCS results acceptable using laboratory criteria?	<u>X</u>		

Notes: MS/MSD relative % difference for one matrix spike value for MTBE was calculated outside the QC range. MS/MSD limits are advisory only; as stated in SW-846, Section 8.7 to 8.8, if the MS/MSD results fall outside the advisable ranges, a laboratory control samples (LCS) must be analyzed and fall within those ranges. LCS results are within quality control limits.

Data Validation Completed by: Brady Nagle
