Re: Preliminary Investigation and Evaluation Report for
3800 San Pablo Avenue, Emeryville, California

Dear Mr. Plunkett:

Enclosed is a copy of the August 28, 2007, Preliminary Investigation and Evaluation Report for the referenced property, as prepared by Enviro Soil Tech Consultants.

I declare, under penalty of perjury, that the information and/or recommendations contained in this report are true and correct to the best of my knowledge.

Very truly yours,

Elaine Kirk

**SUBJECT: PRELIMINARY INVESTIGATION AND
EVALUATION REPORT AT THE PROPERTY**
Located at 3800 San Pablo Avenue, in
Emeryville, California

Dear Ms. Kirk:

As outlined in our revised work plan for a Phase II environmental assessment dated September 25, 2006, Enviro Soil Tech Consultants has completed a drilling investigation at your property located at 3800 San Pablo Avenue in Emeryville, California. Seven soil borings were advanced and 28 soil samples and 7 water samples were collected for laboratory analysis to evaluate the hydrocarbon impact beneath the property. The results of our investigation are presented in this Preliminary Investigation and Evaluation Report, which has been prepared in accordance with the *Tri-Regional Board Recommendations for Preliminary Investigation and Evaluation of Underground Tank Sites*.

File No. 4-02-742-ST

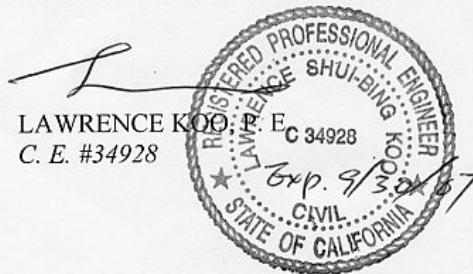

If you have any questions or require additional information, please feel free to contact our office at (408) 297-1500 or email at info@envirosoiltech.com.

Sincerely,

ENVIRO SOIL TECH CONSULTANTS

**PRELIMINARY INVESTIGATION
AND EVALUATION REPORT
3800 San Pablo Avenue
Emeryville, California**

1.0 INTRODUCTION

1.1 BACKGROUND

The property is located in a commercial district at the intersection of San Pablo Avenue, Adeline Street, and West MacArthur Boulevard, in Emeryville, California (Figure 1). The ground is relatively flat. San Pablo Avenue Venture purchased the property from General Motors in 1981. Prior to 1981, it was a GM truck dealership. Since 1981, it has been leased to various tenants, including a billboard company (Adway, Inc.), an office supply company (JC Paper Co.), an auto repair shop (H. Beck BMW), and an auto accessory company (East Bay Sunroof/American Sunroof Co.). Since 1991, it has been leased to Safe Shield, Inc. dba MAZ, an auto & commercial and residential window retailer and installation company.

It is our understanding that at some point during its history, the property was heated with heating oil, which was stored in two underground tanks. Alpha Geo Services (AGS) removed these tanks on May 2, 2002. One tank measured 550 gallons in capacity; the other tank measured 1000 gallons. ESTC collected two soil samples from beneath the tanks at the depth of approximately 7 feet below ground surface and examined them for evidence of contamination.

ESTC's field engineer observed oily discoloration and odors in the samples, and Mr. Robert Weston of ACHCSA recommended further excavation to remove the oil-impacted soil from the tank pit. AGS deepened the excavation to approximately 11 feet and removed 40 cubic yards of contaminated soil. The soil was stockpiled on visquine and samples were collected to characterize it for later disposal. Three additional samples were collected from the tank pit, and all five pit samples were transmitted to a state-certified analytical laboratory for hydrocarbon analysis.

The samples were analyzed for Total Petroleum Hydrocarbons in the gasoline and diesel ranges (TPHg and TPHd), Total Oil & Grease (TOG), volatile aromatic hydrocarbons (Benzene, Toluene, Ethylbenzene, and Total Xylenes [BTEX]), five gasoline oxygenates, semi-volatile organic compounds (SVOC's), PCB's, Creosote, and seventeen metals. The results were summarized in a tank removal report dated June 11, 2002 and a soil disposal report dated June 17, 2002.

Hydrocarbons were detected in both samples from beneath the 550-gallon tank, but concentrations declined downward. At 7 feet, a TPHg concentration of 440 mg/Kg (milligrams per kilogram) was detected, declining to 26 mg/Kg at 10 feet. Similarly, the TPHd concentration declined from 280 to 97 mg/Kg and the TOG concentration declined from 304 to 107 mg/Kg. Beneath the 1000-gallon tank, the concentrations were lower but did not decrease significantly with depth. At 6.5 feet, the concentrations were 46, 29, and 29 mg/Kg respectively, and at 8.5 feet the concentrations were 370, 24 and 24 mg/Kg. In the deepest sample at 11 feet, the concentrations were 59, 18, and 18 mg/Kg. Ethylbenzene and Total Xylenes were detected at very low concentrations in a few samples, but no gasoline oxygenates, PCB's, SVOC's Creosote, Benzene, or Toluene was detected in any of the samples.

Groundwater did not enter the excavation at any time during the tank removal activities, and the depth to groundwater was unknown. Therefore, ESTC could not estimate the probability that groundwater had been impacted by the fuel release. However, due to the low concentrations in all soil samples and the evidence for downward decrease in the magnitude of the impact, the likelihood that groundwater had been impacted appeared to be low.

In order to comply with State and County regulations, Alameda County Health Care Services Agency requested an investigation to determine whether groundwater had been impacted by the release and to delineate the extent of impacted soil. The purpose of this investigation was to meet those objectives.

2.0 FIELD PROCEDURES

On May 21, 2007, Enviro Soil Tech Consultants (ESTC) and Vironex, Inc. mobilized a trailer-mounted direct-push (Geoprobe®) drilling rig to the site. Between May 21 and 24, seven borings were advanced at the locations shown in Figure 2. All of the borings were located east of the underground tanks, which were buried beneath the sidewalk along Adeline Street.

The depth of the borings ranged from 20 feet (B-2 through B-4) to 35 feet (B-1). The borings were continuously sampled in clear polyethylene liners. Logs of each boring were prepared during drilling by ESTC's field engineer, and soil samples were screened for visual and olfactory evidence of hydrocarbon staining. The logs are included in Appendix "D". Samples were cut from the liners at 5-foot intervals from 5 to 20 feet below surface grade and preserved in a cooled ice chest for later transport to the laboratory for analysis.

Groundwater entered the borings during drilling, and the depth at which the water entered was noted on the boring logs. Upon completion of each boring, a length of temporary PVC casing was lowered into the borehole to allow relatively sediment-free water to enter the casing. A stainless steel bailer was then lowered into the casing to collect the water sample. These samples were poured into 40-milliter glass vials and 1-liter glass bottles and also placed into the cooler for subsequent transport. The borings were then backfilled with cement grout.

3.0 LABORATORY PROCEDURES

The samples were analyzed for low and high molecular-weight hydrocarbons (gasoline and diesel fuel) by EPA method 8015. They were analyzed for volatile aromatic hydrocarbons (Benzene, Toluene, Ethylbenzene, and Total Xylenes), Ethanol, and the gasoline oxygenate Methyl Tertiary Butyl Ether (MTBE) by EPA method 8260B. They were also analyzed for total Lead (Pb), using EPA method 3050B/6010B. The laboratory reports are in Appendix "E"

4.0 RESULTS

4.1 SOIL DESCRIPTION

Clay was the main lithology logged in all of the borings. It ranges from brown through bluish or grayish brown to black in color. Various amounts of silt, sand, and gravel are present, and in some places the clay grades to clayey silt or sandy silt. No conspicuous beds of sand or gravel were observed, although a thin (2.5-foot) lens of clayey gravel is present in B-1 at 15 feet and a 3 or 4-foot thick layer of gravelly-clayey sand is present at 8 feet in B-7.

Figure 3 shows two cross sections that were constructed from the boring logs. The sections are simplified from the logs to make it somewhat easier to correlate the strata between borings. In the upper cross section, the strata appear to be fairly horizontal, but do not extend across the entire site. In the lower section, there is a thin silty zone in B-3 and B-4 that might grade northward to clayey gravel in B-1, and if so, the strata dip to the north.

5.0 ANALYTICAL RESULTS

5.1 SOIL RESULTS

The laboratory results indicate that the heating oil tanks exerted very minimal impact on the soil. Twenty-five of the 28 samples were below the laboratory detection limits for all hydrocarbons, and the other three had very low concentrations of light hydrocarbons (gasoline and its aromatic components). All three of those samples were at 20 feet, at the soil-water interface, and came from the central portion of the site (Figure 3). Heavier hydrocarbons, such as those that are present in heating oil, were not detected in the diesel fuel analysis (Table 1). The total lead concentrations were also within normal background levels and give no indication of a release of leaded fuel.

5.2 GROUNDWATER RESULTS

The groundwater results indicate that groundwater has been impacted by light hydrocarbons, but there is no indication of impact by higher molecular weight compounds. The affected area is in the central and southern part of the site; no hydrocarbons were detected in the two northern borings (B-2 and B-7). The TPHg concentration ranged from 4,500 µg/L in B-3 to 780,000 µg/L in B-5 (Table 2). Aromatic hydrocarbons (Benzene, etc.) were detected in four borings, with the highest concentrations in the central part of the site (B-1 and B-6).

6.0 CONCLUSIONS

When the heating oil storage tanks were removed in 2002, fuel hydrocarbons spanning the gasoline-diesel range were detected as deep as 11 feet below grade, and tended to show a downward decline in concentration. This preliminary drilling investigation found very little evidence of soil contamination between the surface and the water table (20 feet below grade), but confirmed that groundwater beneath the site has been impacted by a hydrocarbon release, probably gasoline. The low concentrations of lead in both soil and groundwater favor the interpretation that the fuel was unleaded gasoline. The post-1985 gasoline oxygenate MTBE was not detected in either soil or water samples, suggesting that the release took place more than 20 years ago. It is thus somewhat surprising that the samples appear to be relatively fresh and unaltered, with Benzene/TPHg ratios of 6-12% in two of the borings (fresh gasoline normally contains about 10% Benzene). Other volatile hydrocarbons (Toluene, Ethylbenzene) are also present, adding further indication that the gasoline has not been extensively weathered or degraded. It is possible that these tanks may have been used at some time in the past to store gasoline, but it does not appear that any leaks or spills occurred from these tanks during the time they were used to store heating oil.

7.0 DISCOVERY OF ADDITIONAL USTs

The fact that the highest hydrocarbon concentrations were found in the southern and central portions of the site and were in the gasoline range suggested to ESTC that there may be another contaminant source. Upon further investigation, ESTC located records showing that two underground gasoline tanks and dispensers were removed from the site in 1981 (Appendix "G"). The records provide little information about the tanks

or the removal activities, except that they were 1,000 gallons in capacity. Their exact location is uncertain, but it is our understanding from Marks Management Co. that they may have been located in the parking lot behind the building, near the sidewalk along 39th Street (Figure 2). Whether these tanks could have been the source of the groundwater contamination is uncertain, especially in view of the fact that they may have been located in the northeastern portion of the site rather than where the contamination was discovered in the southwestern portion.

The records in Appendix "G" indicate that Bay Excavators performed the tank removal for Mr. William Banker immediately following the period when the site was in use by the General Motors truck dealership. Thus, if these tanks were the source of the groundwater contamination, then subsequent tenants and/or owners of the property are not Responsible Parties for that contamination.

In addition to the uncertainty regarding the source of the contamination, the lateral extent of the groundwater impact and the direction of groundwater flow are undetermined. However, the very high gasoline concentration in the water sample from B-5 suggests that it is very likely that groundwater is impacted beneath the intersection of San Pablo Avenue and Adeline Street as well as beneath the Suite B building facing San Pablo Avenue. Concentrations in B-1 and B-3 are high enough to also suggest that the contamination may extend under the Suite A building. Therefore, in order to resolve these uncertainties and satisfy the concerns expressed by the regulatory agency in their April 2003 request for this investigation, we recommend preparing a work plan to expand this investigation and install groundwater monitoring wells. As this will significantly increase the cost of the investigation, we recommend that Marks Management apply for inclusion in the State Underground Storage Tank Cleanup Fund, if they have not done so already.

STANDARD OPERATION PROCEDURES

ENVIRO SOIL TECH CONSULTANTS

DRILLING AND SOIL SAMPLING PROCEDURE

A direct push technology (Geoprobe) tool with hollow-stem auger was used in drilling the soil borings to the desired depths.

Prior to drilling, all drilling equipment was thoroughly steam-cleaned to minimize the possibility of cross-contamination and/or vertical migration of possible contaminants.

In addition, sampling equipment was washed between samples with Tri-sodium Phosphate (TSP) solution or an equivalent EPA-approved detergent followed by a rinse in distilled water.

During the drilling operation, undisturbed soil samples were taken from the required depth by forcing a 2-inch sampler lined with polyethylene or brass tubes driven into undisturbed sediments at the bottom of the borehole by means of hydraulic push technologies.

The selected sampling tubes were immediately trimmed, the ends covered tightly with aluminum foil and plastic caps, sealed with tape labeled, placed in a plastic bag and stored in a cold ice chest in order to minimize the escape of any volatile present in the samples. Soil samples were sent to a state-certified hazardous waste laboratory for analysis accompanied by a chain-of-custody record.

Soil samples collected at each sampling interval were inspected for any possible contamination (odor or peculiar colors). Soil vapor concentrations were measured in the field by using a Photoionization Detector (PID), Photovac Tip Air Analyzer. The soil sample was sealed in a Zip-Loc plastic bag and placed in the sun to enhance volatilization of the hydrocarbons from the sample. The purpose of this field analysis is to qualitatively determine the presence or absence of hydrocarbons and to establish which soil samples were analyzed at the laboratory. The data was recorded on the drilling log at the depth corresponding to the sampling point.

Other soil samples may be collected to document the stratigraphy and estimate relative permeability of the subsurface materials.

Soil tailings that are obtained during drilling were stored at the site, pending the analytical test results to determine proper disposal.

GROUNDWATER SAMPLING

Prior to collection of groundwater samples, all of the sampling equipment (i.e. bailer or tubing) were cleaned by pumping TSP water solution followed by distilled water.

Temporary well casings were installed in the borings for the purpose of groundwater sampling. The wells were bailed or pumped to remove four to ten well volumes or until the discharged water temperature, conductivities and pH stabilized. “Stabilized” is defined as three consecutive readings within 15% of one another.

The groundwater sample was collected when the water level in the well recovered to 80% of its static level.

Forty milliliter (ml.) glass volatile organic analysis (VOA) vials with Teflon septa and 1 liter amber glass bottle were used as sample containers. The groundwater sample was being decanted into each VOA vial in such a manner that there was a meniscus at the top. The cap quickly was placed over the top of the vial & bottle and securely tightened. The VOA vial and glass bottle were then be inverted and tapped to see if air bubbles are present. If none is present, then the sample was labeled and refrigerated for delivery under chain-of-custody to the laboratory. The label information has included a sample identification number, job identification number, date, time, type of analysis requested and the sampler’s name.

Certificate of Analysis - Final Report

On May 22, 2007, samples were received under chain of custody for analysis.

Entech analyzes samples "as received" unless otherwise noted. The following results are included:

<u>Matrix</u>	<u>Test / Comments</u>
Solid	Electronic Deliverables for Geotracker Hold ICP Metals: EPA 3050B / EPA 6010B TPH-Extractable: EPA 3545A / EPA 8015B(M) TPH-Purgeable - GC: EPA 5030B (or 5035A for Encore Samples only)/EPA 8015B VOCs: EPA 5030B (or 5035A for Encore Samples only)/EPA 8260B

Entech Analytical Labs, Inc. is certified for environmental analyses by the State of California (#2346). If you have any questions regarding this report, please call us at 408-588-0200 ext. 225.

Sincerely,

C. L. Thom
Laboratory Director

Certificate of Analysis - Final Report

On May 23, 2007, samples were received under chain of custody for analysis.

Entech analyzes samples "as received" unless otherwise noted. The following results are included:

<u>Matrix</u>	<u>Test / Comments</u>
Solid	Electronic Deliverables for Geotracker Hold ICP Metals: EPA 3050B / EPA 6010B TPH-Extractable: EPA 3545A / EPA 8015B(M) TPH-Purgeable - GC: EPA 5030B (or 5035A for Encore Samples only) / EPA 8015B VOCs: EPA 5030B (or 5035A for Encore Samples only)/EPA 8260B

Entech Analytical Labs, Inc. is certified for environmental analyses by the State of California (#2346). If you have any questions regarding this report, please call us at 408-588-0200 ext. 225.

Sincerely,

C. L. Thom
Laboratory Director

Certificate of Analysis - Final Report

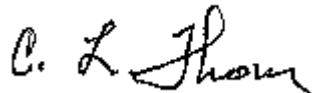

On May 22, 2007, a sample was received under chain of custody for analysis.

Entech analyzes samples "as received" unless otherwise noted. The following results are included:

<u>Matrix</u>	<u>Test / Comments</u>
Liquid	Electronic Deliverables for Geotracker ICP Metals: EPA 3010A / EPA 6010B for Groundwater and Water - EPA 200.7 for Wastewater TPH-Purgeable - GC : EPA 5030B / EPA 8015B VOCs: EPA 5030B / EPA 8260B for Groundwater and Water - EPA 624 for Wastewater

Entech Analytical Labs, Inc. is certified for environmental analyses by the State of California (#2346).
If you have any questions regarding this report, please call us at 408-588-0200 ext. 225.

Sincerely,

C. L. Thom
Laboratory Director

Certificate of Analysis - Final Report

On May 25, 2007, samples were received under chain of custody for analysis.

Entech analyzes samples "as received" unless otherwise noted. The following results are included:

<u>Matrix</u>	<u>Test / Comments</u>
Solid	Electronic Deliverables for Geotracker Hold ICP Metals: EPA 3050B / EPA 6010B TPH-Extractable: EPA 3545A / EPA 8015B(M) TPH-Purgeable - GC: EPA 5030B (or 5035A for Encore Samples only)/EPA 8015B VOCs: EPA 5030B (or 5035A for Encore Samples only)/EPA 8260B

Entech Analytical Labs, Inc. is certified for environmental analyses by the State of California (#2346). If you have any questions regarding this report, please call us at 408-588-0200 ext. 225.

Sincerely,

C. L. Thom

Certificate of Analysis - Final Report

On May 23, 2007, samples were received under chain of custody for analysis.

Entech analyzes samples "as received" unless otherwise noted. The following results are included:

<u>Matrix</u>	<u>Test / Comments</u>
Liquid	Electronic Deliverables for Geotracker ICP Metals: EPA 3010A / EPA 6010B for Groundwater and Water - EPA 200.7 for Wastewater TPH-Extractable: EPA 3510C / EPA 8015B(M) TPH-Purgeable - GC : EPA 5030B / EPA 8015B VOCs: EPA 5030B / EPA 8260B for Groundwater and Water - EPA 624 for Wastewater

Entech Analytical Labs, Inc. is certified for environmental analyses by the State of California (#2346).
If you have any questions regarding this report, please call us at 408-588-0200 ext. 225.

Sincerely,

C. L. Thom

Certificate of Analysis - Final Report

On May 25, 2007, samples were received under chain of custody for analysis.

Entech analyzes samples "as received" unless otherwise noted. The following results are included:

<u>Matrix</u>	<u>Test / Comments</u>
Liquid	Electronic Deliverables for Geotracker ICP Metals: EPA 3010A / EPA 6010B for Groundwater and Water - EPA 200.7 for Wastewater TPH-Extractable: EPA 3510C / EPA 8015B(M) TPH-Purgeable - GC : EPA 5030B / EPA 8015B VOCs: EPA 5030B / EPA 8260B for Groundwater and Water - EPA 624 for Wastewater

Entech Analytical Labs, Inc. is certified for environmental analyses by the State of California (#2346).
If you have any questions regarding this report, please call us at 408-588-0200 ext. 225.

Sincerely,

C. L. Thom

Driller: Vironex - Lic #: 705927 - Method: other

Work Total: \$200.00

Specifications

Permit Number	Issued Dt	Expire Dt	#	Hole Diam	Max Depth
W2007-0580	05/04/2007	08/19/2007	9	8.00 in.	30.00 ft

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Applicant shall contact James Yoo for an inspection time at 510-670-6633 at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
5. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.

Alameda County Public Works Agency - Water Resources Well Permit

6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
 7. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.
 8. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

Re: Notice of Violation
3800 San Pablo Avenue
Emeryville, California 94608

Dear Mr. Peacock:

In accordance with your telephone conversation of today with Elaine Claytor of this office, please find enclosed photocopies of our file documents concerning the removal of underground storage tanks at the referenced location. This work was performed in 1981, at the behest of the City of Emeryville Fire Marshall.

Very truly yours,

Fillmore C. Marks

PROPOSAL

We propose to furnish all materials and perform all labor necessary to complete the following:

TANK REMOVAL

1. Remove two(2) 1000 gal and two(2) gasoline pumps. Dispose off site as per codes.
2. Backfill excavation, compact and re-surface area disturbed with asphalt.
3. Obtain tank permits as per city requirements.
4. No. 2 above shall be modified as follows:

Back fill the hole with sand and crushed rock and compacted to 95% compaction. Resurface area disturbed with concrete. Additional costs - \$225.00

TOTAL BID -- \$2,640.00

All of the above work to be completed in a substantial and workmanlike manner for the sum of TWO
THOUSAND SIX HUNDRED FORTY & NO/100ths Dollars (\$2,640.00)

Payments to be made by 10th as the work progresses to the value of
100% per cent of all work completed. The entire amount of contract to be paid
within 30 days after completion of our work.

Any alteration or deviation from the above specifications involving extra cost of material or labor will only be executed upon written orders for same, and will become an extra charge over the sum mentioned in this contract. All agreements must be made in writing.

Respectfully submitted,
BAY EXCAVATORS
