Alameda County Zone 7 Agency  
100 North Canyons Parkway  
Livermore, CA 94551

Subject: Well Destruction, PG&E Livermore Training Center, 7205 National Drive, Livermore, California

Dear Mr. Hong:

Pacific Gas and Electric Company (PG&E) Environmental Services has prepared this report documenting the destruction of six groundwater monitoring wells (MW-1 through MW-6) at the PG&E Livermore Training Center, located at 7205 National Drive, Livermore, California. PG&E destroyed the groundwater monitoring wells at the request of the Alameda County Zone 7 Water Agency (the County) and the Alameda County Environmental Health Services (Environmental Health) and because they are no longer in use. Monitoring wells MW-1 through MW-6 were installed in August 1990. The locations of former monitoring wells MW-1 through MW-6 and other site features are shown on Figure 1.

Prior to performing the well destruction, PG&E obtained drilling permit number 26026 from the County for the destruction of monitoring wells 3S/2E-1K2 (MW-1), 3S/2E-1L1 (MW-2), 3S/2E-1L2 (MW-3), 3S/2E-1L3 (MW-4), 3S/2E-1L4 (MW-5), 3S/2E-1K3 (MW-6). A copy of the drilling permit is provided in Appendix A.

On February 6, 2006, PG&E observed Gregg Drilling and Testing, Inc. (Gregg) destroy groundwater monitoring wells MW-1 through MW-6. Prior to the monitoring well destruction, PG&E measured and recorded the depth to water and total depth of each well. The total depth of monitoring wells MW-1 through MW-6 were 39.35', 39.40', 39.42', 39.72', 39.82', and 39.49', respectively. The depth to water measurements in monitoring wells MW-1 through MW-6 were 27.66', 29.45', 24.43', 24.45', 29.05', and 24.08', respectively. Monitoring wells MW-1 through MW-6 were all constructed of 2-inch diameter PVC.

Gregg destroyed groundwater monitoring wells MW-1 through MW-6 by pressure grouting. The well casings were filled with cement grout from the bottom of the well to the top of the well casing and approximately 30 pounds of pressure was applied to the top of the casing for approximately five minutes. If the cement grout subsided in the well casing after the pressure was applied, the well casing was refilled with cement grout to the top of the well casing. The well boxes and concrete skirts were then removed and the upper two feet of the borings were backfilled with concrete.

Department of Water Resources (DWR) Well Completion Reports for monitoring wells MW-1 through MW-6 are provided in Appendix B. PG&E understands that the County will forward the completed DWR reports to the DWR.

Mr. Wyman Hong

I hereby agree to comply with all requirements of this permit and Alameda County Ordinance No. 73-88.

APPLICANT'S SIGNATURE Rob Saur Date 1/26/06  
Rob Saur

- A. GENERAL
  1. A permit application should be submitted so as to arrive at the Zone 7 office five days prior to proposed starting date.
  2. Submit to Zone 7 within 60 days after completion of permitted work the original Department of Water Resources Water Well Drillers Report or equivalent for well projects or drilling logs and location sketch for geotechnical projects.
  3. Permit is void if project not begun within 90 days of approval date.
- B. WATER SUPPLY WELLS.
  1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
  2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic and irrigation wells unless a lesser depth is specially approved.
  3. An access port at least 0.5 inches in diameter is required on the wellhead for water level measurements.
  4. A sample port is required on the discharge pipe near the wellhead.
- C. GROUNDWATER MONITORING WELLS INCLUDING PIEZOMETERS
  1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
  2. Minimum seal depth for monitoring wells is the maximum depth practicable or 20 feet.
- D. GEOTECHNICAL. Backfill bore hole with compacted cuttings or heavy bentonite and upper two feet with compacted material. In areas of known or suspected contamination, tremied cement grout shall be used in place of compacted cuttings.
- E. CATHODIC. Fill hole above anode zone with concrete placed by tremie.
- F. WELL DESTRUCTION. See attached.
- G. SPECIAL CONDITIONS. Submit to Zone 7 within 60 days after the completion of permitted work the well installation report including all soil and water laboratory analysis results.

Approved Wyman Hong Date 1/31/06

**Wells 3S/2E-1K2 (MW-1), 3S/2E-1K3 (MW-6), 3S/2E-1L1 (MW-2), 3S/2E-1L2 (MW-3), 3S/2E-1L3 (MW-4) and 3S/2E-1L4 (MW-5)  
Permit 26026**

**Destruction Requirements:**

1. Clean out all bridged or poorly compacted materials to the bottom of the well.
2. Sound the well as deeply as practicable and record for your report.
3. Pressure grout the casing to two feet below the finished grade or original ground, whichever is the lower elevation.
4. Remove the casing, seal, and gravel pack to two feet below the finished grade or original ground, whichever is the lower elevation (optional).
5. After the seal has set, backfill the remaining hole with compacted material (optional).
