Subject: Underground Storage Tank Removal Report, Former AAA Equipment Company Site, 745 50th Avenue, Oakland, California

Dear Mr. Gomez:

LFR Levine·Fricke (LFR) has prepared this report describing the removal of two underground storage tanks (USTs), and associated soil and groundwater remedial activities conducted at the former AAA Equipment Company site, located at 745 50th Avenue, Oakland, California ("the Site"). This report is presented on behalf of Alta Properties, LLC. The USTs were removed in accordance with requirements set forth in the City of Oakland Fire Department, Hazardous Materials Division, Underground Tank Closure Plan.

Two USTs were discovered during site development activities in June 2003. They had apparently been abandoned in place by removing the tops of the USTs, backfilling the tanks with soil, and covering them with soil. The soil above the USTs was removed during grading activities at the Site. Subsequent to the discovery of the two USTs, information was obtained indicating that a former business at the Site had used liquid asphalt and had stored it in two USTs.

Soil was excavated from within and around the tanks before the USTs were cut up, removed, and disposed of at a metal recycling facility. Soil surrounding the USTs, oil-affected groundwater, and associated piping and sumps were also removed and disposed of at approved disposal facilities.

LFR compared the results of site background soil samples, final UST excavation soil confirmation samples, and grab groundwater samples collected from the excavation to applicable Environmental Screening Levels (ESLs). Based on this comparison, LFR recommends that no further remedial actions be required for soil, provided that future intrusive activities such as trenching or grading are conducted properly regarding health and safety concerns related to handling and disposing of soil and water containing low levels of chemicals. A Residual Soil Management Plan addressing these issues has been prepared for the Site and is included under separate cover.

Grab groundwater samples were collected from the excavations after removal of affected soils and oily groundwater, and analyzed for hydrocarbons, VOCs, metals, polychlorinated biphenyls, and polynuclear aromatics. Analytical results showed that the samples contained concentrations of

hydrocarbons, VOCs, and metals at levels above ESLs (Table 5). However, shallow groundwater in the area does not meet the requirements for drinking water standards, as noted in Section 10.0 of this report.

Thank you for your assistance with this project. Please call Larry Lapuyade or Andy Lojo at (510) 652-4500 if you have any questions or need additional information.

Sincerely,

Andrew Lojo, R.G. #6034

1.0 INTRODUCTION

LFR Levine·Fricke (LFR) has prepared this report on behalf of Alta Properties, LLC ("Alta"). This report describes the removal of two underground storage tanks (USTs), and associated soil and groundwater remedial activities conducted at the former AAA Equipment Company, located at 745 50th Avenue in Oakland, California ("the Site"; Figure 1). The work described in this report was conducted to mitigate soil and groundwater contamination discovered during site redevelopment activities.

2.0 BACKGROUND

The Site is approximately 2.5 acres in size and is located approximately 0.5 mile from San Leandro Bay, which is part of San Francisco Bay. The depth to groundwater at the Site is approximately 8 feet below ground surface (bgs) and groundwater reportedly flows toward the southwest (toward the bay). The Site was reportedly occupied by AAA Equipment Company beginning in the 1950s and was used as a junkyard to store scrap metal, used machinery, and machine parts (Hageman-Aguiar, Inc. [H-A] 2000).

In May 2000, H-A conducted a Phase I Environmental Site Assessment (Phase I ESA) to document and evaluate the environmental condition of the Site. The Phase I ESA reported random spillage (dripping) of various lubricating oils, waste motor oil, and motor fuels onto soils at the Site. The Phase I ESA also indicated minor handling of other chemicals, including solvents, paints, and chemicals associated with lead/acid batteries and electrical transformers. H-A recommended that a soil investigation be conducted to profile chemical concentrations in shallow soils at the Site (H-A 2000).

Harding ESE conducted a shallow soil and groundwater investigation at the Site in May 2002. The investigation reportedly consisted of targeted (visually affected areas) and random sampling locations across the Site. A total of 24 soil samples were collected from 12 soil borings (2 per boring). Grab groundwater samples were collected from five of the 12 borings. Both soil and groundwater samples were analyzed for total petroleum hydrocarbons (TPH) as diesel (TPHd), TPH as motor oil (TPHmo), and volatile organic compounds (VOCs). Three selected soil samples were additionally analyzed for semivolatile organic compounds (SVOCs) and total metals.

Results indicated TPHd and TPHmo concentrations in soil in excess of 2,500 milligrams per kilogram (mg/kg). It was also reported that "there was only one very low detection of benzene, toluene, ethylbenzene, and xylenes (BTEX) in the twenty-four soil samples collected and virtually no chlorinated compounds [were] detected" (Harding ESE 2002). It was also reported that elevated levels of mercury were detected in soil at the Site. Between February and May 2002, the site owner reportedly had removed "much of the visually impacted surface soil at the Site" (Harding ESE 2002). Groundwater samples collected from the Site indicated that "virtually no impact to the groundwater had occurred from the soil contamination" (Harding ESE 2002). In

the report, groundwater was characterized as brackish, and therefore not a drinking water resource.

A metals characterization program was initiated in May 2002 that targeted the location where elevated levels of mercury had been detected in soil at the Site. The results of the metal characterization program indicated that "no elevated levels of mercury were detected at that time" (Harding ESE 2002).

An Underground Storage Tank Closure Report dated October 27, 2002, was prepared and submitted to the Oakland Fire Department Hazardous Materials Division by Morgan Environmental Services (MES) documenting the removal of an 800-gallon UST found at the Site in September 2002 by MES. MES concluded that "the Site had met the six criteria established by the State Water Resources Control Board Interim Guidance and Supplemental Instruction for low risk fuel leak sites." MES recommended that a "No Further Action" letter be granted for the Site provided that the Site maintained its industrial/commercial land use, and that the site soils would be capped with an impermeable barrier. MES also recommended decommissioning a groundwater monitoring well located at the Site. Groundwater samples collected from this well reportedly contained TPHd and benzene at 0.2 and 0.01 milligrams per liter (mg/l), respectively (MES 2002).

Alta purchased the Site in September 2002 and began site development activities in October 2002. Before LFR began fieldwork at the Site in August 2003, the majority of the Site had been graded and compacted and three structures had been completed (Figure 2). Alta also leased the property adjoining the Site on two sides (east and north; Figure 2) and dubbed it the "flag lot." The flag lot was graded along with the rest of the Site in preparation for final paving with asphalt and/or concrete. The soil spoils from the grading of the flag lot had been stockpiled on an adjacent parcel. The stockpile was dubbed the "loaf pile."

During site grading activities, two USTs were detected in the northwestern portion of the Site. The USTs were rectangular in shape and measured approximately 16 feet by 20 feet by 8 feet deep (smaller/southern UST) and 16 feet by 30 feet by 7 feet deep (larger/northern UST; Figure 1). At the time of discovery, neither UST had a top and each tank was filled with soil. Alta subsequently learned that, at some time prior to AAA Equipment Company's occupation of the Site, liquid asphalt had been stored in the USTs and used by the previous business. The Phase I ESA prepared by H-A did not contain a discussion of these USTs, and Sanborn maps in the Phase I ESA did not depict this part of the property. Alta retained LFR to assist it with UST removal and associated site remedial activities necessary for site redevelopment.

3.0 PRE-EXCAVATION ACTIVITIES

3.1 Health and Safety

Before fieldwork to excavate the USTs began, LFR reviewed reports and analytical data documenting previous environmental activities conducted at the Site. LFR prepared two site-specific Health and Safety Plans (HSPs): one for UST removal and soil excavation and sampling activities for LFR employees working at the Site, and one for the site grading contractor.

3.2 Permitting

A UST Removal Permit Application and an Underground Tank Closure Plan (Appendix A) were submitted to the City of Oakland Fire Department, Fire Prevention Bureau, Hazardous Materials Division (HMD) on August 26, 2003. Approvals of the permit (#2003-062) and the closure plan were received on September 8, 2003. Two additional documents, a UST Facility form (formerly SWRCB forms A and B) and a UST Unauthorized Release form, were also filed with the HMD. Copies of the forms are presented in Appendix B. Appendix C presents the Tank Removal Application and Tank Removal Inspection Forms.

3.3 Loaf Pile Sampling

On September 2, 2003, LFR collected three four-point composite soil samples at selected locations within the loaf pile (approximately 2,800 cubic yards Figure 2). The samples were collected from an excavator bucket at four different depths at each sample location and then composited into one sample. The samples were collected in brass liners, capped at each end with Teflon tape and a plastic cap, and labeled. The samples were placed in an ice-chilled cooler and transported to the analytical laboratory under strict chain-of-custody protocol.

The samples were collected to assess whether soil from the loaf pile was suitable to be used as UST excavation backfill material and site grading material or whether the soil should be disposed of at a landfill.

The samples were submitted for chemical analysis of total petroleum hydrocarbons as gasoline (TPHg), BTEX, methyl tertiary-butyl ether (MTBE), TPH as diesel and motor oil (TPHd/mo), VOCs, polychlorinated biphenyls (PCBs), polynuclear aromatics (PNAs), and metals (Title 22). These analyses throughout the remainder of the report are referred to as "the suite of analyses."

4.0 UST REMOVAL

Alta retained Bluewater Environmental to perform UST removal and excavation activities at the Site. Both USTs were constructed of approximately 0.75-inch-thick steel plates. The northern UST also had a base of concrete poured inside it, and another layer of concrete and asphalt was present beneath it. Oily soil inside the USTs was removed using an excavator. The soil was placed into two stockpiles, one pile for each UST.

Bluewater then excavated an approximately 3-foot-wide, 7-foot-deep trench along the eastern side of each UST, for inspection purposes, temporarily stockpiling the excavated soils on site. Reportedly, according to Bluewater personnel, groundwater began entering the excavation of the southern UST after excavation. Oil also began seeping from beneath the UST onto the water surface. To prepare the USTs for subsequent removal, Bluewater excavated trenches around the periphery of each UST and stockpiled the soil on site.

Each UST had an approximately 6-inch-diameter, 36-foot-long pipe that connected the tank to its own concrete sump located near the western site boundary (Figure 2). In compliance with the UST Closure Plan for the Site (Appendix A), one soil sample was collected every 20 feet from beneath each pipe. These sample locations were approximately 18 feet from the UST. Soil samples were collected following the same protocol described in Section 3.0.

LFR personnel met Mr. Hernan Gomez, HMD inspector, at the Site on September 5, 2003, to discuss UST removal strategy. He approved cutting up the USTs in place prior to removal. Mr. Gomez also requested that groundwater be pumped from the excavations following UST removal to remove residual oil-affected groundwater, thereby allowing "fresh" groundwater to enter the excavations. This groundwater could then be sampled in order to evaluate groundwater quality in the vicinity of the USTs.

Bluewater cut the USTs in place using a metal shear attached to the excavator. The cut-up pieces were then transported and disposed of at Alco Iron & Metal, a metal recycling facility, located in San Leandro, California. A copy of the transport form and certificate of destruction is presented in Appendix D. The piping was also removed along with the two sumps, which measured approximately 2 x 4 x 3 feet each. The base of the northern UST was removed by breaking the concrete within the UST with a hydraulic hammer attached to an excavator. The broken concrete and asphalt was removed from the bottom of the UST and temporarily stockpiled on site for later disposal.

5.0 GROUNDWATER SAMPLING AND DISPOSAL

Following the removal of both USTs, oily groundwater that filled both excavations was removed as requested by Mr. Gomez of the HMD. Approximately 65,000 gallons of oily groundwater was pumped from both excavations between September 15 and 24, 2003. The oil/water mixture was stored in two 19,000-gallon storage tanks prior to off-site disposal as non-hazardous wastewater. The wastewater was transported by Philip Transportation & Remediation, Inc., using 5,000-gallon vacuum trucks, to Seaport Environmental, a licensed wastewater disposal facility, between September 18 and October 1, 2003. Copies of the transport forms are presented in Appendix D.

Following removal of water containing visible oil, LFR collected grab groundwater samples for chemical analysis from both UST excavations on September 24. Collected samples were analyzed for the suite of analyses. Analytical results are presented in Table 5.

6.0 AFFECTED SOIL EXCAVATION AND DISPOSAL

Following the removal of both USTs, soil containing product was removed from both excavations and placed into stockpiles prior to disposal off site. Figure 3 illustrates the excavation locations.

6.1 Southern UST Excavation

Upon removal of the southern UST, LFR observed oily soils directly beneath the bottom of the UST. Approximately 1.5 feet of material was excavated from the bottom of the southern UST excavation. Oily product was also observed seeping from the western, southern, and northern sidewalls and from a limited area of the eastern sidewall, mostly from a depth of approximately 7 feet bgs. Additional soil was excavated from those areas until product flow ceased (Figure 3). Additional soil was also excavated from the southern, western, and northern sidewalls and a small portion of the eastern sidewall based upon preliminary elevated analytical results (for TPHd/mo) from soil confirmation samples and soil sample SSD-1 collected from those areas.

6.2 Northern UST Excavation

Upon removal of the northern UST, LFR inspected the soils beneath the bottom of the UST and along the sidewalls of the excavation, and noted that a small amount of product was present. Approximately 0.5 foot of soil was excavated from the bottom of the UST excavation and small amounts of soil were excavated from the southern and western excavation sidewalls.

6.3 UST Excavation Backfilling

Additional excavation was conducted at the request of the client's geotechnical advisor to remove water-saturated soils from the bottom of each excavation for compaction purposes prior to backfilling. After water was pumped from both excavations and saturated soil was removed, filter fabric was placed in the bottom of the excavations. Approximately 2 to 4 feet of drain rock was then placed to bridge the saturated zone between the bottom of the excavation and approximately 2 feet above the water table (at approximately 4 feet bgs). Fabric was then placed on top of the rock and the remainder of the excavation was backfilled and compacted with soil from the loaf pile.

6.4 Additional Excavation Work

To remove additional free product detected in near surface soils located around the former UST area, soil surrounding the immediate UST excavation areas was excavated to a maximum depth of approximately 5 feet bgs (Figure 3). Additional excavations were conducted in areas adjacent to the USTs to remove a buried railroad spur (ties and roadbed) located along the western property line, as well as buried asphalt paving (most of the Site was previously paved; Figure 3). Additional excavation was conducted in the northeastern area of the Site to remove buried wooden structures and asphalt paving. The depth of the northeastern excavation was between approximately 2 and 3 feet (Figure 3).

6.5 Soil Disposal

One four-point composite soil sample was collected from each of the excavated soil stockpiles and at several areas where soil was to be removed, to characterize the soils for disposal purposes (see Section 7.0). Samples were analyzed for the suite of analyses. The LUFT metals analysis was substituted for the Title 22 metals analysis because the disposal facility required only the LUFT analysis. Samples were also analyzed for the soluble threshold limit concentration (STLC) for lead using the California Waste Extraction Test.

Soil removed from the excavations was transported by Ron's Trucking, located in Livermore, California, from September 26 through October 2, 2003. A total of 2,962 tons of soil was removed from the Site. Copies of the transport forms are presented in Appendix D.

Based on the results of stockpile characterization sampling, the soil was disposed of at Forward Landfill, located in Manteca, California, as Class II non-hazardous waste. Copies of the waste profile report prepared by Forward Landfill, waste manifests, and landfill weight tickets are presented in Appendix E.

7.0 EXCAVATION SOIL CONFIRMATION SAMPLING AND ADDITIONAL SAMPLING

To comply with the UST Closure Plan for the Site (Appendix A), and at the direction of Mr. Gomez of the HMD, LFR collected 10 soil samples, 5 from each UST excavation, on September 16, 2003 (Figure 3). Sidewall samples were collected in the middle of each sidewall, just above the soil-water interface. The bottom soil samples were collected in the middle of the bottom of the UST excavation. Samples were collected in brass liners following the same protocol discussed in Section 3.0. Samples were submitted for chemical analysis for the suite of analyses with LUFT metals substituted for Title 22 analysis.

Following additional excavation activities as discussed in Section 6.0, additional excavation confirmation soil samples were collected from the southern, western, and northern sidewalls of the southern UST excavation at the same locations as the previous samples on September 19 and 23, 2003, and analyzed as noted above.

Field notes describing the activities summarized above are presented in Appendix F.

8.0 SAMPLE ANALYSIS

The soil and groundwater samples collected from the site and the site vicinity were submitted to Curtis & Tompkins, Ltd. Analytical Laboratory (C&T) of Berkeley, California, a California state-certified laboratory. Twenty-nine soil samples and four groundwater samples were analyzed for one or more of the following:

- TPHd/mo using EPA Method 8015B
- TPHg using EPA Method 8015B
- BTEX/MTBE and VOCs using EPA Method 8260B
- PNAs using EPA Method 8100 (8270C)
- PCBs using EPA Method 8082
- California Title 22 Metals using EPA Method 6010/7000
- LUFT Metals using EPA Method 6010B

Analytical results for soil samples are presented in Tables 1 through 4 and analytical results for groundwater samples are presented in Table 5. Laboratory certificates and chain-of-custody forms are presented in Appendix G.

9.0 ANALYTICAL RESULTS

Laboratory analytical results reported for TPHd/mo were flagged by the analytical laboratory to indicate that the detected compound was heavier than diesel and lighter than motor oil. Based upon the reported history of the Site as an asphalt batch plant, the material detected was likely liquid asphalt oil, which is considered a residual fuel. Therefore, the remainder of this report uses the term "residual fuel," rather than "TPHd/mo," when these results are discussed.

9.1 Soil Confirmation Samples

A total of 13 soil excavation confirmation samples was collected from the two UST excavations. Ten of those samples are representative of soils left in place. The remaining three were collected from soils that were subsequently removed (see *, Tables 1 through 4). Analytical results for these samples showed the following:

- Residual fuel concentrations ranged from below laboratory analytical detection limits of 1 mg/kg to 990 mg/kg.
- BTEX compounds were not detected above laboratory analytical detection limits.
- MTBE was detected in only one sample at 0.03 mg/kg.
- VOCs were detected at low levels in 3 of the 10 samples, with concentrations ranging from 0.0058 mg/kg to 0.072 mg/kg. The compounds detected were acetone, chlorobenzene, and 1,2-dichlorobenzene (1,2-DCB), 1,3-dichlorobenzene (1,3-DCB), and 1,4-dichlorobenzene (1,4-DCB).
- PCBs were not detected above laboratory analytical detection limits.
- PNAs were detected in 9 of the 10 samples collected, at concentrations ranging from 0.051 mg/kg to 0.76 mg/kg.
- LUFT 5 metals were detected at concentrations that are considered to be within the range of background as presented in the Lawrence Berkeley National Laboratory (LBNL) study "Analysis of Background Distributions of Metals in the Soil at Lawrence Berkeley National Laboratory," conducted in June 2002 (LBNL et al. 2002).

Soil samples SSD-1 and SSD-2 were collected from areas with visual contamination (Figure 3) to determine the concentrations of chemicals in soil. Soil surrounding (and including) sample SSD-1 was subsequently removed during excavation activities. Sample SSD-2 was collected approximately 2 feet from the western property line, and was therefore left in place. Analytical results for sample SSD-2 contained the following:

- Residual fuel concentration was 11,000 mg/kg.
- BTEX compounds were not detected above laboratory analytical detection limits.

- VOC concentrations ranged from 0.0058 mg/kg to 0.012 mg/kg. The compounds detected were isopropylbenzene, propylbenzene, sec-butylbenzene, and n-butylbenzene.
- PCBs were not detected above analytical detection limits.
- PNA concentrations ranged from 1.4 mg/kg to 12 mg/kg. The compounds detected were acenaphthene, fluorene, phenanthrene, anthracene, fluoranthene, pyrene, benzo (a) anthracene, and chrysene.
- Concentrations of LUFT metals were below background levels (LBNL et al 2002), with the exception of lead, which was detected at 130 mg/kg.

9.2 Waste Characterization Samples

Five waste characterization samples were collected from various soil stockpiles, and in areas where the soils were subsequently excavated and removed from the Site. Analytical results for these samples showed the following:

- Residual fuel concentrations ranged from 260 mg/kg to 19,000 mg/kg.
- BTEX was detected in only one of the five samples at concentrations ranging from 0.0062 mg/kg to 0.039 mg/kg.
- VOC concentrations ranged from 0.0051 mg/kg to 0.063 mg/kg. The compounds detected were acetone, methylene chloride, propylbenzene, 1,3,5- and 1,2,4-trimethylbenzene, para-isopropyl toluene, and n-butylbenzene.
- PNA concentrations ranged from 0.079 mg/kg to 54 mg/kg. The compounds detected were naphthalene, acenaphthene, fluorene, phenanthrene, anthracene, pyrene, benzo (a) anthracene, chrysene, and benzo (b) fluoranthene.
- PCB concentrations ranged from 0.11 mg/kg to 0.17 mg/kg. The compounds detected were Aroclor 1254 and 1260.
- Concentrations of LUFT metals were below background levels (LBNL et al 2002), with the exceptions of lead and zinc, which were detected at maximum concentrations of 170 mg/kg and 690 mg/kg, respectively.
- Soluble lead was detected at 1.9 mg/kg.

9.3 Loaf Pile

Three soil characterization samples were collected from the loaf pile. Analytical results for these samples showed the following:

- Residual fuel concentrations ranged from 340 mg/kg to 3,500 mg/kg.
- TPHg was detected at 1.2 mg/kg. However, the laboratory flagged this compound as being heavier than gasoline, and it was likely related to the asphalt oil.

- BTEX, MTBE, and VOCs were not detected above laboratory analytical detection limits.
- PCB concentrations ranged from 1.1 mg/kg to 6.3 mg/kg. The compounds detected were Aroclor 1254 and 1260.
- PNA concentrations ranged from 0.26 mg/kg to 12 mg/kg.
- Concentrations of Title 22 metals were within background concentrations (LBNL et al 2002), except for barium at a maximum concentration of (340 mg/kg), cadmium (6.2 mg/kg), copper (74 mg/kg), lead (180 mg/kg), mercury (0.43 mg/kg), and zinc (510 mg/kg).
- Soluble lead was detected at 11 mg/kg.

9.4 Groundwater Analytical Results

Analytical results for grab groundwater samples collected from the two excavations after removal of oily water contained low levels of residual fuel, PNAs, VOCs and metals. Analytical results for these samples showed the following:

- PCBs were not detected above laboratory analytical detection limits.
- One PNA (naphthalene) was detected at a trace concentration of 0.0096 mg/l.
- Two LUFT metals were detected at trace to low concentrations of 0.0041 mg/l (lead) and 0.045 mg/l (zinc).
- VOCs were detected at trace to low concentrations ranging from 0.0006 to 0.36 mg/l. The compounds detected were acetone; 1,1-dichloroethene (1,1-DCE); MTBE, 1,1-dichloroethane (1,1-DCA); benzene; chlorobenzene; 1,2-DCB, 1,3-DCB, and 1,4-DCB; 1,2,4-trichlorobenzene (1,2,4-TCB); and 1,2,3-TCB.
- Residual fuel was detected at concentrations from 2.2 mg/l to 3.7 mg/l.

10.0 COMPARISON OF DATA TO APPLICABLE SCREENING LEVELS

Analytical results for TPHg, PNAs, PCBs, VOCs, residual fuel, and metals in soil left in place and in soil reused as fill material (loaf pile soil) are compared with regulatory screening criteria in this section. The screening criteria included Preliminary Remedial Goals (PRGs); Risk-Based Screening Levels (RBSLs); and Environmental Screening Levels (ESLs) for shallow soils at industrial sites where groundwater was not a current or potential source of drinking water. Shallow groundwater at the Site was not considered a potential source for drinking water for the following reasons:

- The Site is located within approximately 0.75 mile of the bay; tidal influence was noted as exposed groundwater rose and fell approximately 1 foot during each day. It is possible that shallow groundwater could be brackish (Harding ESE 2002).

- The area has municipally supplied water by the City of Oakland; therefore, there is no need to install wells in the area for domestic water consumption.
- In discussions with the Regional Water Quality Control Board (RWQCB), it was noted that shallow groundwater in many parts of the Bay Area is contaminated with sewage and nitrates from leaking underground sewer pipes and is therefore unfit for human consumption.
- Based upon the industrial history of the Site and surrounding areas, it is unlikely that shallow site groundwater would be used as a domestic source for drinking water, because much of the soil and groundwater in the area is likely affected by industrial chemicals.
- A current state law requires all drinking water wells to have a minimum seal of 50 feet. This would further require that a drinking water aquifer would be at a minimum depth of 50 feet bgs. Shallow groundwater at the Site is at an approximate depth of 8 feet.

Analytical results from soil sample SSD-2 were not included in the following comparisons. Although this sample represents soils left in place, these soils would have been removed if they had not been located within 2 feet of the property line.

PRGs developed by Region 9 of the U.S. Environmental Protection Agency (U.S. EPA) are presented in the "Region 9 PRGs Table Users Guide/Technical Background Document," dated October 1, 2002 (U.S. EPA 2002). PRGs are risk-based chemical concentrations intended to assist regulators in the initial screening-level evaluations of contaminated sites. The PRGs contained in the Region 9 PRG Table were calculated without site-specific information and are based on direct contact exposures. Therefore, PRGs are considered to be conservative screening levels, especially for potential human health risk. Site analytical results were compared to PRGs for "industrial soil" presented in the Region 9 PRG Table. "Industrial soil" values were selected as PRG screening levels because they are the most applicable criteria for site conditions and land use.

RBSLs are presented in the RWQCB document entitled, "Application of Risk-Based Screening Levels and Decision Making to Sites With Impacted Soil and Groundwater, Interim Final," dated December 2001 (RWQCB 2001). Volume 1 of that document presents lookup tables of conservative RBSLs for chemicals commonly found at sites with contaminated soil and groundwater. Site analytical results were compared to values presented in Table B for shallow soil (less than 3 meters) screening levels at sites with commercial/industrial land use and where potentially affected groundwater is not a current or potential drinking water resource. These values were selected from the table as RBSL screening levels for the site and were very often the same as ESL values.

ESLs are the most recent regulatory screening levels (and the most conservative) that are applicable to the site. The applicable screening levels used were derived from Table B of the Regional Water Quality Control Board (RWQCB) document entitled,

"Screening For Environmental Concerns at Sites with Contaminated Soil and Groundwater, Interim Final," dated July 2003 (RWQCB 2003). Volume 1 of RWQCB (2003) presents lookup tables of conservative ESLs for chemicals commonly found at sites with contaminated soil and groundwater. The ESL for residual fuel was obtained from Table B-2 of RWQCB (2003).

Tables 1 through 5 of this report compare the ESL for each compound (based on RWQCB 2003) to site-specific soil and groundwater sample analytical results. Site analytical results were compared to ESL values presented in Table B for shallow soil (less than 3 meters) screening levels at sites with commercial/industrial land use and where potentially affected groundwater is not a current or potential drinking water resource. Site analytical results were also compared to ESL values.

Because all detected chemical concentrations were below PRGs and below or at RBSLs, the discussions, conclusions, and recommendations in this report were based upon comparison of detected chemicals to ESLs, which in many cases were the same as RBSLs.

In addition, background concentrations were used as an additional screening tool for metals due to the high variability of naturally occurring metals concentrations normally found in the San Francisco Bay Area (LBNL et al. 2002). Some of the regulatory screening levels are below naturally occurring metals concentrations.

10.1 Soil Results

Hydrocarbons

Based on Table B of RWQCB (2003), the ESL for residual fuel would have been 1,000 mg/kg. However, because soils at the Site are completely capped by either concrete or asphalt, reducing the risk of human exposure, the leaching of chemicals to groundwater, and ecological impacts from the discharge from direct rainfall runoff, the default screening value for residual fuels derived from Table B-2 of RWQCB (2003) of 5,800 mg/kg was applied, instead the value in Table B. As discussed in Section 9.0, TPH concentrations detected in site excavation confirmation samples, background samples, and loaf pile (reused soil) samples were below 5,800 mg/kg.

VOCs

Analytes in the VOC analysis included BTEX compounds and MTBE. VOCs detected in soils left in place and also detected in re-used soils, and their corresponding ESLs, included the following:

- acetone at a maximum concentration of 0.03 mg/kg (ESL is 0.5 mg/kg)
- chlorobenzene at a concentration of 0.0084 mg/kg (ESL is 1.5 mg/kg)

- 1,3-DCB at a maximum concentration of 0.029 mg/kg (ESL is 7.4 mg/kg)
- 1,4-DCB at a maximum concentration of 0.072 mg/kg (ESL is 0.13 mg/kg)
- 1,2-DCB at a concentration of 0.0058 mg/kg (ESL is 1.6 mg/kg)
- MTBE at a concentration of 0.03 mg/kg (ESL is 5.6 mg/kg)

The following chemicals were detected, however, no ESLs have been assigned for them: isopropylbenzene, propylbenzene, sec-butyl benzene, and n-butyl benzene. VOCs were not detected above their respective ESLs.

PCBs

The PCBs detected in site soils were Aroclor 1254 and 1260. Based on Table B of RWQCB (2003), the applicable ESL for each PCB was 0.74 mg/kg. Three of thirteen soil samples collected contained PCBs above the ESL. Residual concentrations of PCBs detected above ESLs ranged from 1.1 mg/kg to 6.3 mg/kg.

PNAs

Four of thirteen soil samples collected contained PNAs above their respective ESLs. The following PNAs were detected above ESLs:

- anthracene at 3.4 mg/kg (ESL is 2.8 mg/kg)
- benzo (a) anthracene at a maximum concentration of 5.9 mg/kg (ESL is 1.3 mg/kg)
- benzo (b) fluoranthene at a maximum concentration of 4.1 mg/kg (ESL is 1.3 mg/kg)
- benzo (k) fluoranthene at a maximum concentration of 4.5 mg/kg (ESL is 1.3 mg/kg)
- benzo (a) pyrene at a maximum concentration of 4.2 mg/kg (ESL is 0.13 mg/kg)

Other PNAs were not detected above their respective ESLs.

Metals

Metals detected at the site were below their respective ESLs, with the exceptions of arsenic. Although arsenic was detected above its ESL of 5.5 mg/kg at a maximum concentration of 9.8 mg/kg, the concentrations were below the LBNL background level of 19 mg/kg (LBNL et al. 2002).

10.2 Groundwater Results

Similar to soil, groundwater analytical results were compared to ESL values in Table B. Groundwater analytical results including ESL values are presented in Table 5 and are summarized below.

Groundwater in this area is considered in the San Francisco Basin Plan as a potential drinking water resource. ESLs for groundwater that is not a potential source of drinking water were used, however, as discussed in Section 10.0. Therefore, ESLs for groundwater that is not a potential source of drinking water were applied.

TPHg

TPHg was detected at 0.15 mg/kg (ESL is 0.5 mg/l).

PCBs

PCBs were not detected above laboratory analytical detection limits.

Metals

Metals were analyzed for the LUFT list. Of the five metals in this analysis, only lead and zinc were detected above laboratory analytical detection limits. Zinc was detected at a concentration of 0.045 mg/l less than the ESL of 0.081 mg/l. Lead was detected at 0.0041 mg/l (ESL is 0.0025 mg/l).

PNAs

PNAs were not detected above their respective ESLs. Only one PNA (naphthalene) was detected above laboratory analytical detection limits at a concentration of 0.0096 mg/l; the ESL for this compound is 0.024 mg/l.

VOCs

VOCs in the analysis included BTEX and MTBE. The following four VOCs were detected at concentrations below their corresponding ESLs:

- 1,1-DCE at a concentration of 0.0006 mg/l (ESL is 0.025 mg/l)
- MTBE at a concentration of 0.0086 mg/l (ESL is 1.8 mg/l)
- 1,1-DCA at a concentration of 0.0015 mg/l (ESL is 0.047 mg/l)
- benzene at a concentration of 0.0013 mg/l (ESL is 0.046 mg/l)

In addition, 1,2,3-TCB was detected at a concentration of 0.0069 mg/l. No ESL is available for this compound.

The following five VOCs were detected at concentrations above their respective ESLs:

- chlorobenzene at a concentration of 0.074 mg/l (ESL is 0.025 mg/l)
- 1,3-DCB at a concentration of 0.21 mg/l (ESL is 0.065 mg/l)
- 1,4-DCB at a concentration of 0.36 mg/l (ESL is 0.015 mg/l)
- 1,2-DCE at a concentration of 0.024 mg/l (ESL is 0.014 mg/l)
- 1,2,4-TCB at a concentration of 0.26 mg/l (ESL is 0.025 mg/l)

Residual Fuel

Residual fuel was detected at a maximum concentration of 3.7 mg/l and the ESL is 0.64 mg/l.

11.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon results of the loaf pile and confirmation soil samples, the Site has been affected during historical uses by lead, asphalt oil, PNAs associated with the asphalt oil, and PCBs. LFR compared confirmation and loaf pile characterization sample concentrations to applicable screening levels as discussed in Section 10.0. The ESLs used for evaluating these compounds were chosen based on the current industrial use of the Site. In addition, the Site is now covered by either asphalt or concrete, which reduces the risk of chemicals leaching to groundwater, ecotoxicity, and direct exposure risk concerns.

During tank removal and soil excavation activities, approximately 65,000 gallons of oily water and product were removed from the Site. Approximately 2,962 tons of hydrocarbon-affected soil and product were removed from the UST excavation and adjoining areas (Figure 3). In addition, both USTs were cut up in place, removed from the excavation, and transported to a metal recycling facility.

Chemical concentrations of VOCs, BTEX/MTBE, TPHg, residual fuel, and metals detected in final excavation soil confirmation samples and residual site background samples, were generally lower than the ESLs determined for the Site. Loaf pile samples were slightly above ESLs for certain PNAs, and some PCBs, as discussed in Section 10.0. LFR recommends that no further soil removal be required under the current industrial use, however, provided that future intrusive activities (such as trenching or regrading) are conducted in accordance with the Residual Soil Management Plan.

The results of the grab groundwater samples collected from the excavations after removal of affected groundwater and oily product contained hydrocarbons and some VOCs at levels slightly above ESLs (Table B of RWQCB 2003). However, groundwater at the Site is not considered a present or future source of drinking water (see Section 10.0) and the chemicals detected above ESLs are expected to have limited mobility. These compounds, which were only detected within one order of magnitude of their respective ESLs in the immediate UST area, are expected to have relatively low mobility. This expectation is confirmed by grab groundwater data from boring B-2, located approximately 15 feet west of the former UST area (Harding ESE, May 30, 2002). Grab groundwater samples from this boring contained the same chemicals at levels that are below ESLs. Therefore, LFR feels that further groundwater assessment or remediation in this area is not warranted at this time.

12.0 LIMITATIONS

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services, and the schedule as agreed upon by LFR and the party for whom this report was originally prepared. This report is an instrument of professional service and was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry. No representation, warranty, or guarantee, express or implied, is intended or given. To the extent that LFR relied upon any information prepared by other parties not under contract to LFR, LFR makes no representation as to the accuracy or completeness of such information. This report is expressly for the sole and exclusive use of the party for whom this report was originally prepared for a particular purpose. Only the party for whom this report was originally prepared and/or other specifically named parties have the right to make use of and rely upon this report. Reuse of this report or any portion thereof for other than its intended purpose, or if modified, or if used by third parties, shall be at the user's sole risk.

Results of any investigations or testing and any findings presented in this report apply solely to conditions existing at the time when LFR's investigative work was performed. It must be recognized that any such investigative or testing activities are inherently limited and do not represent a conclusive or complete characterization. Conditions in other parts of the project site may vary from those at the locations where data were collected. LFR's ability to interpret investigation results is related to the availability of the data and the extent of the investigation activities. As such, 100% confidence in environmental investigation conclusions cannot reasonably be achieved.

LFR, therefore, does not provide any guarantees, certifications, or warranties regarding any conclusions regarding environmental contamination of any such property. Furthermore, nothing contained in this document shall relieve any other party of its responsibility to abide by contract documents and applicable laws, codes, regulations, or standards.

Notes:

Values in **bold** detected above laboratory analytical detection limits.

TPHd = Total petroleum hydrocarbons as diesel; samples analyzed using EPA Method 8015B
TPHmo = Total petroleum hydrocarbons as motor oil; samples analyzed using EPA Method 8015B
TPHg = Total petroleum hydrocarbons as gasoline; samples analyzed using EPA Method 8015B
B = Benzene; samples analyzed using EPA Method 8021B
T = Toluene; samples analyzed using EPA Method 8021B
E = Ethylbenzene; samples analyzed using EPA Method 8021B
X = Total xylenes; samples analyzed using EPA Method 8021B
MTBE = Methyl tertiary-butyl ether; samples analyzed using EPA Method 8021B
ESLs = Environmental Screening Levels

< = Not detected above laboratory analytical detection limits
--- = Not analyzed
* = Soils subsequently removed
** = TPHd/TPHmo as residual fuels, Table B-2

UST = Underground storage tank
UST-S = Southern/smaller underground storage tank
UST-L = Northern/larger underground storage tank

H = Heavier hydrocarbons contributed to the quantitation
Y = Sample exhibits chromatographic pattern which does not resemble standard
L = Lighter hydrocarbons contributed to the quantitation

Data entered by VCH. Proofed by LPL. QA/QC by JBP.

Notes:

(1) = See Laboratory Data Sheets Appendix for full list of analytes included in these analyses.

Values in **bold** detected above laboratory analytical detection limits.

PNAs = Polynuclear aromatics; samples analyzed using EPA Method 8270C
PCBs = Polychlorinated biphenyls; samples analyzed using EPA Method 8082
H = Heavier hydrocarbons contributed to the quantitation
Y = Sample exhibits chromatographic pattern which does not resemble standard

UST = Underground storage tank
UST-S = Southern/smaller underground storage tank
UST-L = Northern/larger underground storage tank
ESLs = Environmental Screening Levels

* = Soils subsequently removed
--- = Not analyzed
< = Not detected above laboratory analytical detection limits

12) Laboratory

Name Curtis & Tompkins, LTD. Analytical Laboratory

Address 2323 Fifth Street

City Berkeley State CA Zip 94710

State Certification No. 01107CA

13) Have tanks or pipes leaked in the past Yes ☐ No ☐ Unknown ☒

If yes, describe _____

14) Describe methods to be used for rendering tank (s): inert:

NOT APPLICABLE - THESE ARE OPEN TOP BINS

Before tanks are pumped out and inserted, all associated piping must be flushed out into the tanks. All accessible associated piping must then be removed. Inaccessible piping must be permanently plugged.

The Bay Area Air Quality Management District, 415/771-6000 must also be contacted for tank removal permit. The use of a combustible gas indicator to verify tank inertness is required. It is the contractor's responsibility to bring a working combustible gas indicator on-site to verify that the tank is inert. **Note: you may be required to recalibrate the combustible gas indicator on site, to show that it is working properly.**

15) Tank History and Sampling Information *** (see instructions) ***

Tank		Material to be sampled (tank contents, soil, groundwater)	Location and Depth of Samples
Capacity	Use History include date last used (estimated)		
TANK 1 8340 ^{3}	UNKNOWN	TANK CONTENTS (Soil) SOIL BENEATH TANK GROUND WATER	SAMPLE FROM STOCKPILE SAMPLE FROM EXCAVATION 2' BELOW TANK BASE
TANK 2 12540 ^{3}	UNKNOWN	AS ABOVE	① 8.5' BELOW GROUND SURFACE SAMPLE GROUNDWATER IN EXCAVATION AT APPROXIMATELY 6' BGS
EXCAVATED SOIL AROUND TANKS 1 & 2 16840 ^{3}		EXCAVATED SOIL AROUND TANKS	SAME AS ABOVE SAMPLE STOCKPILE

One soil sample must be collected for every 20 linear feet or piping that is removed. A ground water sample must be collected if any ground water is present in the excavation.

EXCAVATED/STOCKPILED SOIL

Stockpiled Soil volume (estimated)	Sampling Plan
TOTAL Volume	3-4 Point Composite Samples

Stockpiled soil must be placed on beamed plastic and must be completely covered by plastic sheeting

Will the excavated soil be returned to the excavation immediately after tank removal?

☐ yes ☒ No ☐ unknown

If yes, explain reasoning _____

If unknown at this point in time, please be aware that excavated soil may no be returned to the excavation without prior approval from Fire Services Agency, Office of Emergency Services. This means that the contractor, consultant, or responsible party must communicate with the Hazardous Materials Inspector **IN ADVANCE** of backfilling operations.

16. Chemical methods and associated detection limits to be used for analyzing samples:

    The Tri-Regional Board recommended minimum verification analyses and practical quantitation reporting limits should be followed.
    See attached Table 2.

17. Submit Site Health and Safety Plan (see Instructions)

Contaminant Sought	EPA or Other Sample Preparation Method Number	EPA or Other Analysis Method Number	Method Detection Limit
TPHg/BTEX/MTBE	SOIL/WATER 5030	8015/8021	TO BE DETERMINED
TPHd/mo	SOIL/WATER LUFT	8015	↓
OIL & GREASE	WATER 1664A	1664A	
PNAS	SOIL 3550 WATER 3520	8270	
VOCS	SOIL/WATER 5030 SOIL 3050	8260B	
CAM 17 METALS	WATER 3010	6010-7000	

18. Submit Workers Compensation Certificate copy

    Name of Insurer STATE COMPENSATION INSURANCE FUND

19. Submit Plot Plan ***(Be Instructions)***

20. Enclose Permit fee (See Instructions)

21. Report any leaks or contamination to this office within 5 days of discovery.

    The written report shall be made on an Underground Storage Tank Unauthorized Leak/Contamination Site Report, (ULR) form.

22. Submit a closure report to this office within 60 days of the tank removal. The report must contain all information listed in item 22 of the instructions.

23. Submit State (Underground storage Tank Permit Application) Forms A and B (one B form for each UST to be removed) (mark box 8 for tank removed in the upper right hand corner)

I declare that to, the best of my knowledge and belief that the statements and information provided above are correct and true.

I understand that information, in addition to that proved above, may be needed in order to obtain approval from the Hazardous Materials Division and that no work is to begin on this project until this plan is approved.

I understand that any changes in design, materials or equipment will void this plan if prior approval is not obtained.

I understand that all work performed during this project will be done in compliance with all applicable OSHA. (Occupational Safety and health Administration) requirements concerning; personnel health and safety. I understand that site and worker safety are solely the responsibility of the property owner or his age and that this responsibility is not shared nor assumed by the City of Oakland.

Once I have received my stamped, accepted closure plan, I will contact the project Hazardous Materials Inspector at least three working days in advance of site-work, to schedule the required inspections.

CONTRACTOR INFORMATION

Name of Business BLUE WATER ENVIRONMENTAL / LFR LEVINE FRICKE

Name of Individual DAN LEVINE / LARRY LAPOYADE

Signature Dan Levine Date 8-26-03

PROPERTY OWNER OR MOST RECENT TANK OPERATOR (Circle one)

Name of Business ALTA PROPERTIES LLC

Name of Individual J. A. KRAUSE

Signature J. A. Krause Date 8/26/03

General Instructions

- Three (3) copies of this plan plus attachments and permit must be submitted to this Department.
- Any cutting into tanks requires Fire Services Agency approval.
- One complete copy of your approved plan must be at the construction site at all times; a copy of your approved plan must also be sent to the landowner.
- State of California Permit Application Forms A and B are to submit to this office One Form A per site, one Form B for each removed tank.

Line Item Specific Instructions

2. SITE ADDRESS
   Address at which closure is taking place.

5. EPA I.D. NO. - under which the tanks will be manifested
   EPA I.D. numbers may be obtained from the State Department of Toxic Substances Control, 916/324-1781

6. CONTRACTOR
   Prime contractor for the project.

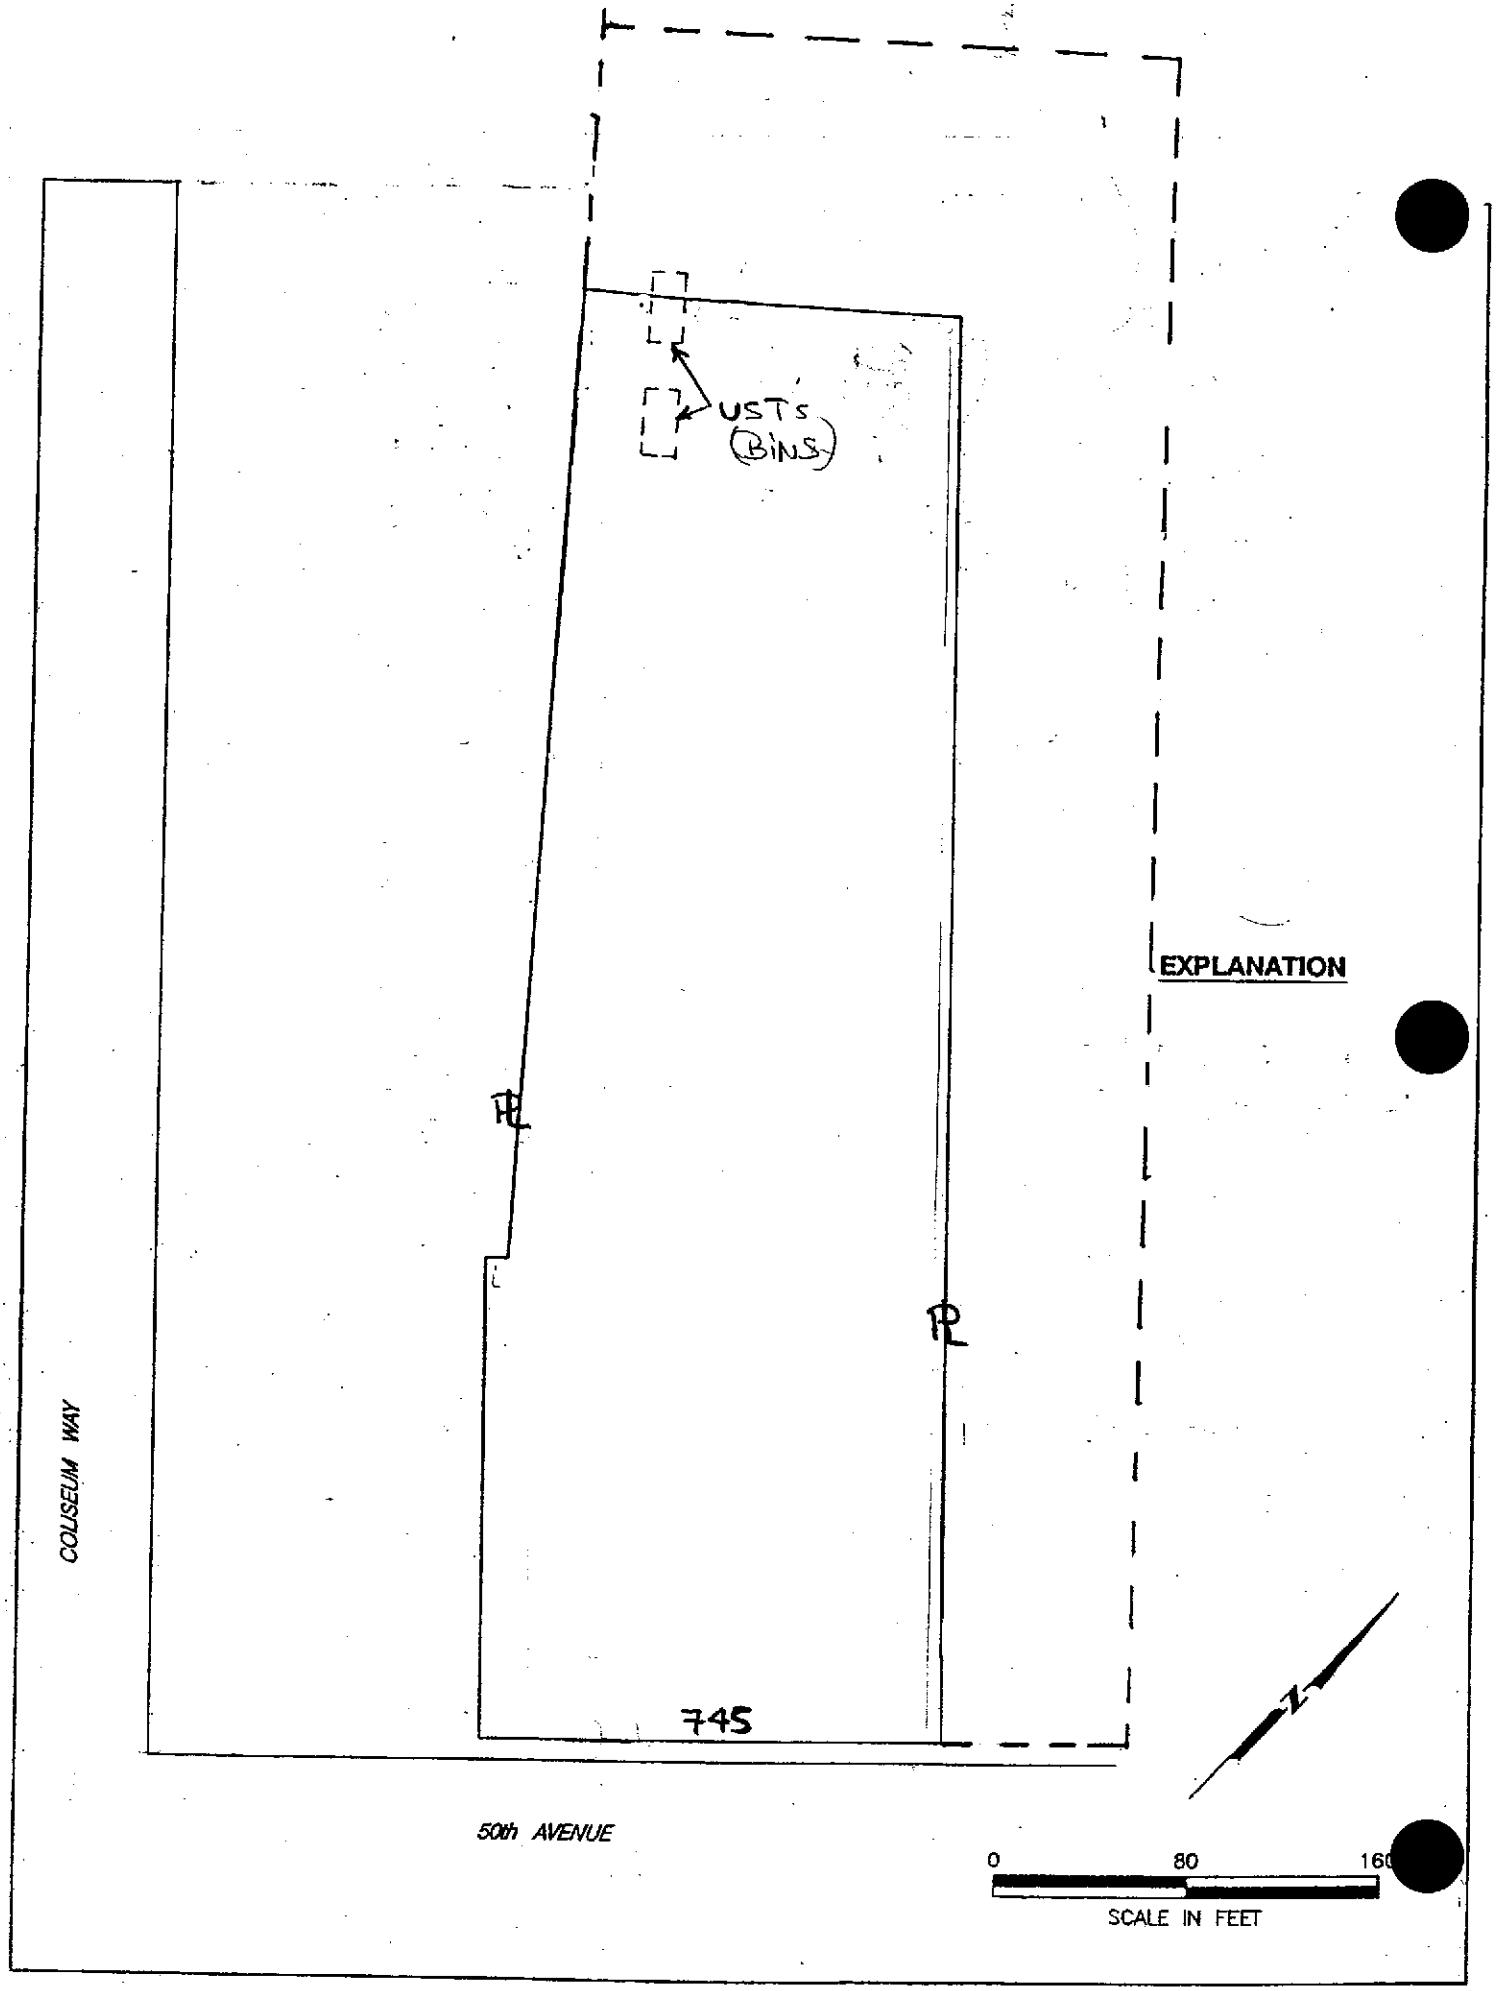

10. STATE REGISTERED HAZARDOUS WASTE TRANSPORTERS/FACILITIES
    a) All residual liquids and sludges are to be removed from tanks before tanks are inerted.
    c) Tanks must be hauled as hazardous waste.
    d) This is the place where tanks will be taken for cleaning.

15) TANK HISTORY AND SAMPLING INFORMATION
Use History - This information is essential and must be accurate. Include tank installation date, products stored in the tank, and the date when the tank was last used.
Material to be sampled - e.g. water, oil, sludge, soil, etc.

Location and depth of samples - e.g. beneath the tank a maximum of two feet below the native soil/backfill interface, side wall at the trig} water mark, etc.

16) CHEMICAL METHODS AND ASSOCIATED DETECTION LIMITS
See attached Table 2.

17) SITE HEALTH AND SAFETY PLAN
A site specific Health and Safety plan must be submitted. We advocate the site health and safety plan include the following items, at a minimum:
a) The name and responsibilities of the site health and safety officer.
b) An outline of briefings to be held before work each day to appraise employees of site health and safety hazards;

Waste Soil Manifests and Profile Report

September 25, 2003

Levine-Fricke-Recon
1900 Powell Street, 12th Floor
Emeryville, CA 94608

Attn: Larry Lapuyade

Re: Approval No. 3785
Contaminated Soil w/asphalt and concrete
745 50th Ave., OAKLAND

Dear Mr. Lapuyade:

FORWARD INC. is pleased to inform you that the approximately 500 CY of Contaminated Soil w/asphalt and concrete from the referenced site has been approved for acceptance at our Manteca, California Landfill as a Class 2 waste. This approval has been based on the information provided in the waste profile and associated materials submitted on behalf of Alta Properties, LLC (Generator). Acceptance of the waste is subject to regulatory requirements, and is also subject to the "Terms and Conditions" agreed to and signed by Generator in the waste profile.

Your approval number for this project will be 3785. This number should be used in all scheduling and correspondence with ***FORWARD, INC.*** regarding this waste profile.

This profile shall remain in effect until March 25, 2004, or until any significant changes in the waste stream occur. At that time, ***FORWARD, INC.*** will re-evaluate the profile, and current analytical data and requirements will be reviewed.

Please schedule all waste shipments with the Landfill (209-982-4298) at least 24 hours in advance. The landfills hours of operation are Monday through Friday 6:00 am to 6:00 pm for soil, 6:00 am to 3:00 pm for asbestos, 6:00 am to 5:00 pm for all other waste types.

Thank you for the opportunity to be of service. Should you have any questions, please do not hesitate to contact me or our Customer Service at (800) 204-4242.

Sincerely,

Allied Waste Industries

Brad Bonner/ig

Does this waste or generating process contain regulated concentrations of the following Pesticides and/or Herbicides: Chlordane, Endrin, Heptachlor (and its epoxides), Lindane, Methoxychlor, Toxaphene, 2, 4-D, 2, 4, 5, -TP Silvex as defined in § 40 CFR 261.33?	YES or (NO)
Does this waste or generating process cause it to exceed OSHA exposure limits from high levels of Hydrogen Sulfide or Hydrogen Cyanide as defined in § 40 CFR 261.23?	YES or (NO)
Does this waste contain regulated concentrations of Polychlorinated Biphenyls (PCBs) as defined in § 40 CFR Part 761?	YES or (NO)
Does this waste contain regulated concentrations of listed hazardous wastes defined by § 40 CFR 261.31, 261.32, 261.33, including RCRA F-Listed Solvents?	YES or (NO)
Does this waste contain regulated concentrations of 2, 3, 7, 8 -Tetrachlorodibenzodioxin (2, 3, 7, 8 - TCCD), or any other dioxin as defined in § 40 CRF 261.31?	YES or (NO)
Is this a regulated Toxic Material as defined by Federal and/or State regulations?	YES or (NO)
Is this a regulated Radioactive Waste as defined by Federal and/or State regulations?	YES or (NO)
Is this a regulated Medical or Infectious Waste as defined by Federal and/or State regulations?	YES or (NO)
Is this waste generated at a Federal Superfund Clean Up Site?	YES or (NO)

VI. GENERATOR CERTIFICATION

I hereby certify that to the best of my knowledge and belief, the information contained herein is a true and acurate description of the waste material being offered for disposal. I further certify that by utilizing this profile, neither myself nor any other employee of the company will deliver for disposal or attempt to deliver for disposal any waste which is classified as toxic waste, hazardous waste, medical or infectious waste, or any other waste material this facility is prohibited from accepting by law. Our company hereby agrees to fully indemnify this disposal facility against any damages resulting from this certification being inaccurate or untrue.

CASE NARRATIVE

This hardcopy data package contains sample and QC results for one product sample, which was received from the site referenced above on September 04, 2003. The sample was received intact. On September 05, 2003, Larry Lapuyade requested additional analysis. All data were E-mailed to Larry Lapuyade on September 09, 2003.

PNAs by (EPA 8270C): No analytical problems were encountered.

ANALYTICAL REPORT

Prepared for:

LFR Levine Fricke
1900 Powell Street
12th Floor
Emeryville, CA 94608

Date: 11-SEP-03
Lab Job Number: 167293
Project ID: STANDARD
Location: Westside/Alta

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures. The results contained in this report meet all requirements of NELAC and pertain only to those samples which were submitted for analysis.

Received Date: **09/02/03**

CASE NARRATIVE

This hardcopy data package contains sample and QC results for three soil samples, which were received from the site referenced above on September 02, 2003. The samples were received cold and intact. All data were E-mailed to Larry Lapuyade on September 08, 2003.

TVH/BTXE: No analytical problems were encountered.

TEH by (EPA 8015B): No analytical problems were encountered.

VOCs by (EPA 8260B): No analytical problems were encountered.

PCBs by (EPA 8082): High TCMX surrogate recovery was observed for sample SSPL-1 (CT# 167293-001). The quality of the data should not be affected because the Decachlorobiphenyl surrogate was within quality control criteria. No other analytical problems were encountered.

PNAs by (EPA 8270C): No analytical problems were encountered.

Metals by (EPA 6000/7000): The matrix spike recoveries for copper and lead are considered not meaningful (NM) as the sample concentration for these elements are two times greater than the spiked level. The sample spiked was not from the site above and the associated blank spike recoveries passed all quality control criteria. No other analytical problems were encountered.

ANALYTICAL REPORT

Prepared for:

LFR Levine Fricke
1900 Powell Street
12th Floor
Emeryville, CA 94608

Date: 15-SEP-03
Lab Job Number: 167392
Project ID: 001-09173-00
Location: Westside/Alta

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures. The results contained in this report meet all requirements of NELAC and pertain only to those samples which were submitted for analysis.

CASE NARRATIVE

This hardcopy data package contains sample and QC results for one soil sample, which was received from the site referenced above on September 05, 2003. The sample was received cold and intact. All data were E-mailed to Larry Lapuyade on September 12, 2003.

TEH by (EPA 8015B): No analytical problems were encountered.

VOCs by (EPA 8260B): No analytical problems were encountered.

PNAs by (EPA 8270C): No analytical problems were encountered.

Metals by (EPA 6000/7000): No analytical problems were encountered.

ANALYTICAL REPORT

Prepared for:

LFR Levine Fricke
1900 Powell Street
12th Floor
Emeryville, CA 94608

Date: 15-SEP-03
Lab Job Number: 167359
Project ID: STANDARD
Location: Westside/Alta

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures. The results contained in this report meet all requirements of NELAC and pertain only to those samples which were submitted for analysis.

Received Date: **09/04/03**

CASE NARRATIVE

This hardcopy data package contains sample and QC results for three soil samples, which were received from the site referenced above on September 04, 2003. The samples were received cold and intact. All data were E-mailed to Larry Lapuyade on September 04, 2003.

TEH by (EPA 8015B): No analytical problems were encountered.

VOCs by (EPA 8260B): No analytical problems were encountered.

PCBs by (EPA 8082): No analytical problems were encountered.

PNAs by (EPA 8270C): High Acenaphthylene matrix spike duplicate recovery was observed for sample FLAG-2-0.5 (CT# 167361-002). The quality of the data should not be affected because the associated laboratory control sample (LCS) passed all quality control criteria. No other analytical problems were encountered.

Metals by (EPA 6000/7000): No analytical problems were encountered.

CASE NARRATIVE

This hardcopy data package contains sample and QC results for five soil samples, which were received from the site referenced above on September 04 and 05, 2003. The samples were received cold and intact. On September 15, 2003, Larry Lapuyade requested additional analysis. All data were E-mailed to Larry Lapuyade on September 22, 2003.

PCBs by (EPA 8082):
No analytical problems were encountered.

Tracy Babjar

CASE NARRATIVE

This hardcopy data package contains sample and QC results for two water samples, which were received from the site referenced above on September 10, 2003. The samples were received cold and intact. All data were E-mailed to Larry Lapuyade on September 15, 2003.

TVH by (EPA 8015B): No analytical problems were encountered.

TEH by (EPA 8015B): No analytical problems were encountered.

VOCs by (EPA 8260B): No analytical problems were encountered.

PNAs by (EPA 8270C): No analytical problems were encountered.

PCBs by (EPA 8082): No analytical problems were encountered.

Metals by (EPA 6000/7000): No analytical problems were encountered.

CASE NARRATIVE

This hardcopy data package contains sample and QC results for one soil sample, which was received from the site referenced above on September 02, 2003. The sample was received cold and intact. On September 12, 2003, Larry Lapuyade requested additional analysis. All data were E-mailed to Larry Lapuyade on September 18, 2003.

Metals by 6010B: No analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 167602 Date Received: 9/16/03 Number of Coolers: 1
Client: LFR Project: 001-09173-00

A. Preliminary Examination Phase
Date Opened: 9/16/03 By (print): Tracy Bibb (sign) Tracy Bibb

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES NO
   If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES NO
   How many and where? _____ Seal date: _____ Seal name: _____
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO N/A
4. Were custody papers dry and intact when received? ..... YES NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... YES NO
6. Did you sign the custody papers in the appropriate place? ..... YES NO
7. Was project identifiable from custody papers? ..... YES NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ..... YES NO
   Type of ice: Wet Temperature: Cold

B. Login Phase
Date Logged In: 9/16 By (print): Tracy Bibb (sign) Tracy Bibb

1. Describe type of packing in cooler: Samples ice
2. Did all bottles arrive unbroken? ..... YES NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ..... YES NO
4. Did bottle labels agree with custody papers? ..... YES NO
5. Were appropriate containers used for the tests indicated? ..... YES NO
6. Were correct preservatives added to samples? ..... YES NO
7. Was sufficient amount of sample sent for tests indicated? ..... YES NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ..... YES NO N/A
9. Was the client contacted concerning this sample delivery? ..... YES NO
   If YES, give details below.
   Who was called? _____ By whom? _____ Date: _____

CASE NARRATIVE

This hardcopy data package contains sample and QC results for two soil samples, which were received from the site referenced above on September 08, 2003. The samples were received cold and intact.

TEH by (EPA 8015B):
No analytical problems were encountered.

PCBs by (EPA 8082): High TCMX surrogate recovery was observed for the method blank (QC226342). This should not affect the quality of the data because the Decachlorobiphenyl surrogate recovery passed all quality control criteria. No other analytical problems were encountered

VOCs by EPA 8260B):
No analytical problems were encountered.

Polynuclear Aromatics by GC/MS (EPA 8270C):
No analytical problems were encountered.

Metals by (EPA 6010B):
No analytical problems were encountered.

CASE NARRATIVE

This hardcopy data package contains sample and QC results for one soil sample, which was received from the site referenced above on September 23, 2003. The sample was received cold and intact. All data were E-mailed to Larry Lapuyade on September 29, 2003.

TEH (EPA 8015B):
No analytical problems were encountered.

VOCs (EPA 8260B):
No analytical problems were encountered.

PNAs (EPA 8270C):
No analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B):
No analytical problems were encountered.

CASE NARRATIVE

This hardcopy data package contains sample and QC results for two water samples, which were received from the site referenced above on September 24, 2003. The samples were received cold and intact. All data were E-mailed to Larry Lapuyade on October 01, 2003.

TEH by (EPA 8015B):
No analytical problems were encountered.

VOCs by (EPA 8260B):
No analytical problems were encountered.

PNAs by (EPA 8270C):
No analytical problems were encountered.

PCBs by (EPA 8082C):
No analytical problems were encountered.

Metals by (EPA 6010B):
No analytical problems were encountered.

General Chemistry:
EPA 1664 requires a matrix spike and matrix spike duplicate to be analyzed, however insufficient sample was received. The associated blank spike recoveries met criteria; which indicates that the lab procedure was within control. No other analytical problems were encountered.

Received Date: **09/29/03**

CASE NARRATIVE

This hardcopy data package contains sample and QC results for one soil sample, which was received from the site referenced above on September 29, 2003. The sample was received cold and intact. All data were E-mailed to Larry Lapuyade on October 06, 2003.

TEH by (EPA 8015B):
No analytical problems were encountered.

VOCs by (EPA 8260B):
No analytical problems were encountered.

PNAs by (EPA 8270C):
No analytical problems were encountered.

PCBs by (EPA 8082C):
No analytical problems were encountered.

Metals by (EPA 6010B):
For sample CT# 167854-003, the nickel and zinc matrix spike recoveries are considered not meaningful (NM) as the sample concentration for these elements are two times greater than the spiked level. The sample spiked was not from the site above and the associated blank spike recoveries passed all quality control criteria. No other analytical problems were encountered.

CASE NARRATIVE

This hardcopy data package contains sample and QC results for one soil sample, which was received from the site referenced above on September 04, 2003. The sample was received intact. On September 17, 2003, Larry Lapuyade requested additional analysis. All data were E-mailed to Larry Lapuyade on September 22, 2003.

Metals by (EPA 6010B): No analytical problems were encountered.
