EXECUTIVE SUMMARY

ERM-West, Inc. (ERM) conducted a Phase I Environmental Site Assessment (ESA) of the former Port of Oakland Facilities Operations and Maintenance Property located at 205/209 Brush Street in Oakland, Alameda County, California (the "site" or "subject property"). The subject property consists of three commercial buildings, totaling approximately 15,692 square feet, (the "subject property buildings") and an associated yard on an approximately 0.74 acre site identified as Alameda County Assessor's Office (Assessor's Office) Assessor's Parcel Number (APN) 001-0111-005-01. The Phase I ESA was conducted in accordance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the standards for conducting all appropriate inquiries set forth by the United States Environmental Protection Agency at Title 40 of the Code of Federal Regulations Part 312. This Phase I ESA was performed on behalf of Pacific Gas and Electric Company (PG&E) to assess potential environmental liabilities associated with surface and/or subsurface impacts from past and current operations at the subject property.

A site visit was conducted on 14 May 2013 by Ms. Deborah Scanlon Wall and Ms. Bailey Blosser of ERM. Mr. Justin Taschek, Warfinger, and Mr. Tim Leong, Environmental Scientist, both with the Port of Oakland, provided information regarding the subject property and accompanied ERM during the site visit.

The subject property is currently vacant; however, is used for storage of documents and furniture by the Port of Oakland. The site is occupied by three commercial buildings, located in the northern and eastern portions of the site, with a paved yard comprising the remainder of the 0.74 acre property. Building 2 (E414) is located in the northern portion of the site, and consists of a singlestory, plus mezzanine, approximately 6,096 square foot office and warehouse building. The building was most recently occupied by construction offices and diver storage. Building 3 (E413) adjoins the southeastern portion of Building 2. The single-story building consists of approximately 1,081 square feet and was most recently used as a vehicle maintenance facility. A covered vehicle wash area and associated sump are located adjacent to the east of Building 3. Building 1 (E414) is located in the southeastern portion of the subject property. The office/warehouse building consists of approximately 15,692 square feet within a single-story and mezzanine. The building was most recently occupied by a paint shop, locker rooms, and offices. An overhang located adjacent to the northwestern exterior of Building 1 was previously used as a solvent drum storage area. The remainder of the site is comprised of an open concrete-paved yard, with the exception of an asphalt-paved area at the western side of the

subject property, where former underground storage tanks (USTs) had been removed. The subject property is surrounded by fencing, with an access gate along the western boundary, at Market Street.

Based on an interview with personnel familiar with the subject property and review of historical photographs and records, the subject property was occupied by residences in the late 1800s, then a blacksmith shop, carpenter shop, and hotel in the early 1900s. By the early 1950s, the subject property was occupied by a retail store, junk yard, machine shop, and restaurant, and by the late 1950s, a truck repair and cleaning facility was also located onsite. By the late 1960s, a paint and varnish facility, including an exterior varnish tank, was located on the subject property. The Port of Oakland's Facilities Operations and Maintenance facility was first located on the site in the early 1970s.

The subject property is accessible from the west via Market Street, and is located in a primarily commercial and light industrial area in Oakland, Alameda County, California. Adjacent properties and surrounding areas include Market Street, with Sincere Home Décor and Sincere Hardware Supply beyond, to the west; 3rd Street, with Extra Space Storage beyond to the north; Brush Street, with Digital Realty and 2nd Street beyond to the east; and a CNG Gas Station and storage and storage and parking lots to the south.

Recognized Environmental Conditions

A recognized environmental condition (REC), as defined in ASTM E 1527-05, is "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property, excluding *de minimis* conditions."

Based on the data obtained during the site visit, the environmental database review, and an interview with personnel familiar with the subject property and its history, this assessment has revealed the following RECs in connection with the subject property:

• One 1,000-gallon diesel underground storage tank (UST) and one 10,000-gallon gasoline UST, along with associated fuel dispensers, piping, concrete and soil overlying the USTs, were removed from the site under the oversight of the Oakland Fire Services Agency (OFSA) in 2003. According to an *Underground Storage Tank Removal*, 209 Brush Street, Oakland, California, prepared by Geomatrix Consultants (Geomatrix), dated July 2003, the USTs were installed in the western-central portion of the site in 1987, and were upgraded in 1998. In April 2002, the USTs failed the OFSA annual tank

monitoring test, and the tanks were disconnected. During removal, soil beneath the tanks was observed to be stained, and a strong hydrocarbon odor was reportedly noted. Additional excavation to the west, north and south, was not conducted after tank removal due to the proximity of Market Street to the west and the limited concrete cutting to the north and south of the excavation; however, additional soil was removed from the east wall of the excavation. Geomatrix collected soil and groundwater samples from the excavation. Soil sample results were reported with detections up to 11,000 milligrams per kilogram (mg/kg) Total Petroleum Hydrocarbons as gasoline (TPHg); 720 mg/kg TPH as diesel (TPHd); 0.92 mg/kg benzene; 880 mg/kg toluene; 270 mg/kg ethylbenzene; 1,510 mg/kg total xylenes; 0.14 mg/kg methyl tert-butyl ether (MTBE); and 5.2 mg/kg lead. Groundwater sample results were reported as 19,000 micrograms per liter (µg/L) TPHg; 2,100 ug/L TPHd; 610 μg/L benzene; 2,500 μg/L toluene; 700 μg/L ethylbenzene; 3,430 µg/L total xylenes; 1,200 µg/L MTBE; and 140 µg/L lead. As of the date of this report, the OFSA has not required additional investigation or remediation activities at the site; however, a case closed status has not been granted. The open case status is considered to be an REC for the site.

- The subject property address of 205 Brush Street is listed as Port of Oakland/Downtown Oakland CNG Station on the Alameda County Contaminated Sites (CS) and Spills, Leaks, Investigations, and Cleanups (SLIC) databases in the Environmental Database Resources (EDR) report, on the State Water Resources Control Board (SWRCB) GeoTracker database, and on the Alameda County Environmental Health Department (EHD) database. Based on the EDR report and regulatory agency databases, the above listings are associated with the southern adjacent CNG station. According to the records reviewed, and a report entitled Removal Action Oversight and Documentation At Downtown Oakland CNG Station, 205/209 Brush Street, Oakland, CA, dated October 16, 2007, stained, odiferous soil was encountered during soil excavation associated with construction of the CNG station on the Port of Oakland-owned property in 2007. Approximately 200 cubic yards of soil was excavated, and soil contaminated with TPH and volatile organic compounds (VOCs) reportedly remains in place. Based on the 2007 report, the soil contamination was considered to possibly be from a previous UST release at the Port of Oakland property adjacent to the north (the subject property). The case is listed as open – site assessment as of April 2007 on the GeoTracker and EHD databases. The case open status and potential source being the subject property represents an REC.
- Based on historical documents reviewed, the subject property has a history of
 commercial and industrial uses associated with potential environmental
 concerns. In the early 1900s, the site was occupied by a blacksmith shop and
 carpenter shop. By the early 1950s, the subject property was occupied by a
 junk yard and machine shop, and by the late 1950s, a truck repair and

cleaning facility was also located onsite. By the late 1960s, a paint and varnish facility, including an exterior varnish tank, was located on the subject property. The Port of Oakland's Facilities Operations and Maintenance facility was first located on the site in the early 1970s. The Port of Oakland's operations included construction offices and diver's storage, including boat storage; a vehicle maintenance facility, including a hydraulic lift; a vehicle wash station; a paint shop, and a fueling station, including gasoline and diesel USTs, as described above. Other than sampling in the former UST location, subsurface investigations have not been conducted to assess the potential impacts from historical site uses. The long history of commercial and industrial activities at the site, and associated potential subsurface impacts, represent an REC for the subject property.

Historical Recognized Environmental Conditions

This assessment has revealed no evidence of historical RECs in connection with the subject property.

De Minimis or Other Potential Issues

The following potential issue and *de minimis* conditions were identified:

- Safety Kleen Corporation is located at 404 Market Street, approximately 1/10 mile north-northeast of the site. This facility is listed on the Leaking Underground Storage Tank (LUST) and Alameda County CS databases as having had chlorinated hydrocarbons, trichloroethylene (TCE), vinyl chloride, and Stoddard solvent/mineral spirits/distillates in the groundwater and soil vapor at the facility. A TPH and VOC vapor plume was identified at the facility in 1988. Safety Kleen entered into a Corrective Action Consent Agreement with the DTSC in 2009 and submitted a Resource Conservation and Recovery Act Facility Investigation (RFI) Work Plan in 2010. The facility is listed with an open – site assessment status on the GeoTracker database. No further information regarding subsurface investigations or extent of the groundwater and soil vapor plumes are available on the GeoTracker database. Based on the information available, the potential for this facility to have adversely impacted the site cannot be ruled out, therefore, it is considered to be a potential issue for the subject property.
- ERM was provided with a *Summary Report: Bulk Asbestos and Lead-Based Paint Survey, 205-209 Brush Street, Oakland, California,* prepared by SCA Environmental, Inc. (SCA), dated 19 September 2001. According to the SCA report, a "partial survey" for asbestos-containing materials was conducted at the subject property building in 2001. The survey report indicated that several asbestos-containing materials (ACMs) were identified in each of the

- subject property buildings. The presence of ACMs is considered to be a *de minimis* condition.
- SCA's 2001 report indicated that lead-based paint was identified in ceramic tile glazing and exterior stucco paint in Building 1. The presence of lead-based paint is considered to be a *de minimis* condition.
- SCA's 2001 report indicated that fluorescent fixtures, suspected to contain PCB ballasts and mercury-containing lamps, and mercury thermostatic switches for the ventilation system were observed within the buildings. The presence of these items is considered to be a *de minimis* condition.

1.0 INTRODUCTION AND BACKGROUND

This section describes the purpose of the Phase I Environmental Site Assessment (ESA), the auditors, the scope of work, and any limiting or special conditions encountered during the assessment.

1.1 PURPOSE AND AUDITORS

ERM-West, Inc. (ERM) conducted a Phase I ESA of the former Port of Oakland Facilities Operations and Maintenance property located at 205/209 Brush Street in Oakland, Alameda County, California (the "site" or "subject property"). The subject property consists of three commercial buildings, totaling approximately 15,692 square feet and associated yard on an approximately 0.74 acre site identified as Alameda County Assessor's Parcel Number (APN) 001-0111-005-01.

A site visit was conducted on 14 May 2013 by Ms. Deborah Scanlon Wall and Ms. Bailey Blosser of ERM. Mr. Justin Taschek, Warfinger, and Mr. Tim Leong, Environmental Scientist, both with the Port of Oakland, provided information regarding the subject property and accompanied ERM during the site visit.

1.2 SCOPE OF WORK

This ESA was conducted in conformance with ERM's proposal dated 25 April 2013 and with the requirements of American Society for Testing and Materials (ASTM) Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the standards for conducting all appropriate inquiries set forth by the United States Environmental Protection Agency (USEPA) at Title 40 of the Code of Federal Regulations (CFR) Part 312.

The ESA was conducted to evaluate and identify conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, at, in, or to the subject property. ERM's Phase I ESA sought to gather information regarding: (1) current and past property users and occupancies; (2) current and past users of hazardous substances and petroleum products; (3) waste management and disposal activities that could have caused a release or threatened release of hazardous substances; (4) current and past corrective actions and response activities to address past and ongoing releases of hazardous substances at the subject property; (5) engineering controls at the subject property; (6) institutional controls at the subject property; and (7) properties adjoining or located near the subject property that have environmental

conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the subject property.

ERM's Phase I ESA included the following tasks:

- An on-site inspection of the subject property to evaluate current conditions and identify areas of potential concern.
- A review of property history through an interview with subject property personnel and aerial photographs, city directories, and historical mapping.
- Observation, and interviews with knowledgeable personnel where possible, of adjacent properties and the local area to evaluate the potential for adverse environmental impact to the subject property.
- Interviews/research of local city/county, tribal, state, and federal records, including contracting of Environmental Data Resources, Inc. (EDR) to identify sites of concern as required in the regulatory records review section of the ASTM standards for a Phase I ESA, where available.
- A request for information pertaining to the subject property from the Alameda County Assessor's Office (Assessor's Office) and the Alameda County Environmental Health Department (EHD). ERM also searched the California State Water Resources Control Board (SWRCB) GeoTracker Database, the California Department of Toxic Substances Control (DTSC) Envirostor Database, and the USEPA Envirofacts Database for information pertaining to the subject property.

Photographs of the subject property and surrounding areas were taken to document current conditions and are included in Appendix A. Copies of aerial photographs, topographic maps, and Sanborn Fire Insurance Maps, as well as the city directory search report, are presented in Appendix B. The EDR database search report is included in Appendix C. Copies of the User and Owner Questionnaires are included in Appendix D.

1.3 LIMITING AND SPECIAL CONDITIONS

Limiting conditions and assumptions for the Phase I ESA are discussed below.

1.3.1 Limiting Conditions during the Site Visit

No limiting conditions were encountered during the site visit.

1.3.2 Significant Assumptions

No significant assumptions were made in preparation of this Phase I ESA.

2.0 SITE SETTING

This section describes the general subject property location and identifies surrounding properties. It also summarizes site topography and hydrology, and the local geology and hydrogeology.

2.1 LOCATION

The subject property consists of three commercial buildings, totaling approximately 15,692 square feet and associated yard on an approximately 0.74 acre site identified as Alameda County APN 001-0111-005-01. The subject property is located at 205/209 Brush Street in Oakland, Alameda County, California. The subject property is accessible from the west off of Market Street. The general location of the subject property and physiographic features of the surrounding area are shown on Figure 1, developed from the United States Geological Survey (USGS) 7.5-minute quadrangle for Oakland West, California, dated 1980.

2.2 NEIGHBORING PROPERTIES

The subject property is located in a primarily commercial and light industrial use area. The abutting properties and nearby land use include:

- **North:** The subject property is bordered to the north by 3rd Street, with Extra Space Storage beyond.
- **South:** The subject property is bordered to the south by a CNG fueling station, and parking and storage lots associated with the nearby businesses.
- East: The subject property is bordered to the east-northeast by an office building and vacant bar. Brush Street is to the east of the southern portion of the site, with Digital Realty and Data Center Solutions beyond.
- **Southeast:** Brush Street, with a U.S. Sprint cellular tower beyond, are located southeast of the site.
- West: The subject property is bordered by Market Street to the west, with Sincere Home Décor, Team Efforts Manufacturers, and Sincere hardware Supply beyond.

Based on ERM's observation, the closest residential property is located approximately 280 feet southeast of the site, along 2nd Street. No visual evidence of environmental concern was observed on immediately surrounding properties.

2.3 TOPOGRAPHY AND HYDROLOGY

The subject property is located in a generally flat area and is situated at an average elevation of 12 feet above mean sea level. Based on site visit observations and topographic map review, the subject property is generally flat, with a slight downward gradient to the southwest. Topography in the site vicinity has a slight downward gradient toward the south-southwest. Based on site visit observations, storm water at the site appears to flow to a storm drain located at the western site boundary gates or into the western adjacent street gutters.

According to the EDR report, there are no federal wetland areas identified at the subject property. ERM did not observe wetland features during the site visit. Federal wetland areas were identified approximately 1/3 mile southeast and southwest of the site. The subject property is not located within the 100-year or 500-year flood zones. Personnel familiar with the site reported there have been no occurrences of flooding at the subject property.

2.4 GEOLOGY AND HYDROGEOLOGY

Geologic and hydrogeologic information was obtained from the EDR report. According to the EDR report, bedrock beneath the site is typically of the Cenozoic Era and within the Quaternary Series. Soils beneath the site are listed as "Urban Land." According to a report entitled *Removal Action Oversight and Documentation At Downtown Oakland CNG Station*, 205/209 Brush Street, Oakland, CA, prepared by R&M Environmental and Infrastructure Engineering, Inc. (R&M) in October 2007, soils at the site and adjacent areas consist of a top thin layer of clay, with light brown clayey fine to medium-grained sands beneath.

While ERM has not confirmed groundwater flow direction at the subject property, based on the 2007 R&M report, groundwater flows to the south, toward the Oakland Inner Harbor. It is important to note that the groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Based on an *Underground Storage Tank Removal* report prepared for the site by Geomatrix Consultants (Geomatrix) in July 2003, groundwater was encountered at approximately 7 feet below ground surface at the subject property.

3.0 SITE AND OPERATIONS INFORMATION

This section provides a general site description and history of operational use, including any utilities provided to the subject property, current and former operations, chemical use and storage, and hazardous and non-hazardous waste management. It also presents an assessment of water, wastewater, and storm water conditions; air emissions; and evidence of polychlorinated biphenyls (PCBs), on-site impacts, asbestos, and lead-based paint at the site.

3.1 GENERAL SITE DESCRIPTION

The subject property is located at 205/209 Bell Street in Oakland, Alameda County, California. According to the Assessor's Office, and site visit observations, the subject property is an approximately 0.74 acre parcel identified with APN 001-0111-005-01. The subject property is improved with three commercial buildings (the "subject property buildings"), totaling approximately 15,692 square feet, and associated yard.

The subject property is currently vacant; however, is used for storage of documents and furniture by the Port of Oakland. The site is occupied by three commercial buildings, located in the northern and eastern portions of the site, with a paved yard comprising the remainder of the 0.74 acre property. Building 2 (E414) is located in the northern portion of the site, and consists of a singlestory, plus mezzanine, approximately 6,096 square foot office and warehouse building. The building was most recently occupied by construction offices and diver storage. Building 3 (E413) adjoins the southeastern portion of Building 2. The single-story building consists of approximately 1,081 square feet and was most recently used as a vehicle maintenance facility. A covered vehicle wash area and associated sump are located adjacent to the east of Building 3. Building 1 (E414) is located in the southeastern portion of the subject property. The office/warehouse building consists of approximately 15,692 square feet within a single-story and mezzanine. The building was most recently occupied by a paint shop, locker rooms, and offices. An overhang located adjacent to the northwestern exterior of Building 1 was previously used as a solvent drum storage area. The remainder of the site is comprised of an open concrete-paved yard, with the exception of an asphalt-paved area at the western side of the subject property, where former underground storage tanks (USTs) had been removed. The subject property is surrounded by fencing, with an access gate along the western boundary, at Market Street.

Based on an interview with personnel familiar with the subject property and review of historical photographs and records, the subject property was occupied

by residences in the late 1800s, then a blacksmith shop, carpenter shop, and hotel in the early 1900s. By the early 1950s, the subject property was occupied by a retail store, junk yard, machine shop, and restaurant, and by the late 1950s, a truck repair and cleaning facility was also located onsite. By the late 1960s, a paint and varnish facility, including an exterior varnish tank, was located on the subject property. The Port of Oakland's Facilities Operations and Maintenance facility was first located on the site in the early 1970s.

The subject property is situated in a primarily commercial and light industrial area in Oakland, Alameda County, California. Adjacent properties and surrounding areas include Market Street, with Sincere Home Décor and Sincere Hardware Supply beyond, to the west; 3rd Street, with Extra Space Storage beyond to the north; Brush Street, with Digital Realty and 2nd Street beyond to the east; and a CNG Gas Station and storage and storage and parking lots to the south.

A layout of the subject property is provided in Figure 2.

3.2 UTILITIES

The subject property is provided with the following utility services:

- Water: East Bay Municipal Utility District (EBMUD);
- Sewer: EBMUD; and
- Electricity: PG&E.

3.3 PROCESSES AND MATERIAL USE

This subsection summarizes information concerning operations at the subject property.

3.3.1 *Current Operations*

The subject property buildings are currently vacant; however, the Port of Oakland stores documents and furniture onsite.

3.3.2 Discontinued Operations

Based on an interview with personnel familiar with the subject property and review of historical photographs and records, the subject property was most recently occupied by the Port of Oakland for their Facilities Operations and Maintenance activities. The Port of Oakland operations included construction

offices and diver's storage, including boat storage, in Building 2; a vehicle maintenance facility, including a hydraulic lift, in Building 3; a vehicle wash station adjacent to Building 3; a paint shop, locker rooms, storage, and offices in Building 1; and a fueling station, including gasoline and diesel USTs, in the western yard of the site.

Additional historic operations, prior to Port of Oakland, were associated with a blacksmith, junk yards, machine shop, paint and varnish manufacturer, and truck repair facility. Details regarding these operations were not readily available.

3.4 CHEMICAL USE AND STORAGE

According to information provided by the site contact and observations made during ERM's site visit, hazardous materials are not currently in use at the subject property. However, hazardous materials remain on the site from prior Port of Oakland activities. In Building 1, five-gallon containers of hydraulic oil were observed on the first floor, former paint shop area; one-gallon containers of top coat and one-quart containers of lubricant were observed in storage rooms near the former paint area. Staining was observed on the concrete flooring in the former paint shop area.

In Building 2, two five-gallon gasoline containers and several vehicle batteries were observed on secondary containment in the former diver's storage area. No staining was observed on the concrete flooring adjacent to the secondary containment.

In Building 3, one-gallon degreaser and antifreeze containers, two 55-gallon oil drums, five-gallon gasoline containers, and one 55-gallon ZEP tire dressing drum were observed on the concrete flooring. Staining was observed on the concrete throughout the former vehicle maintenance building.

Additionally, drums of vehicle washing solutions were observed in the vehicle wash area. Minor staining was observed on the concrete in the wash area.

3.4.1 *Underground Storage Tanks*

According to information provided by the site contact, there are no current USTs located on the subject property. However, based on interviews with personnel familiar with the site and agency documents reviewed, one 1,000-gallon diesel tank and one 10,000-gallon gasoline tank, along with associated fuel dispensers, piping, concrete and soil overlying the USTs, were removed from the site under

the oversight of the Oakland Fire Services Agency (OFSA) in 2003. The former USTs are further discussed in Section 4.2 below.

3.4.2 Aboveground Storage Tanks

No aboveground storage tanks (ASTs) were observed or reported to be present at the site.

3.5 HAZARDOUS AND NON-HAZARDOUS WASTE MANAGEMENT

This subsection describes information concerning the use of hazardous and non-hazardous waste at the subject property.

3.5.1 *Hazardous Waste*

No hazardous wastes were observed or reported to be generated at the subject property. No information regarding past hazardous waste generation was available from site personnel or readily available regulatory agency records.

3.5.2 *Non-Hazardous Waste*

Non-hazardous wastes are not currently generated at the subject property.

3.6 WATER, WASTEWATER, AND STORM WATER

This subsection presents information concerning water, wastewater, and storm water at the subject property.

3.6.1 Water

According to site visit observations and information provided by the site contact, the subject property obtains water for sanitary and drinking water use from EBMUD. The EDR report did not list a water supply well on the subject property and no evidence of water wells was observed during the site visit.

3.6.2 Wastewater

According to site personnel, the subject property does not generate process wastewater at the site; therefore, no process wastewater from on-site operations is discharged to the municipal sewer system. However, a drain, reportedly connected to a closed sump, is located in the vehicle wash area. According to

personnel familiar with the site, the sump was cleaned out as needed when the site was occupied and vehicle wash operations were conducted.

No sanitary wastewater is currently generated; however, when the subject property was occupied, wastewater was discharged to the EBMUD sewer system. According to the site contact, there are no current or former septic systems, leach fields, drywells, or underground injection control wells at the site. ERM did not observe evidence of septic tanks or septic systems at the subject property during the site visit.

3.6.3 Storm Water

Based on site visit observations, storm water flows into a drain located along the western subject property boundary or flows into street gutters along Market Street, adjacent to the west of the site.

3.7 AIR EMISSIONS

No evidence of current air emissions or other significant sources subject to permitting regulations were identified by ERM during the site visit. However, a paint booth was observed in the former paint shop of Building 1. No information was available from site personnel regarding the venting associated with the paint booth.

3.8 POLYCHLORINATED BIPHENYLS

ERM inspected the subject property for types of equipment that have been historically associated with the use of PCBs as a dielectric fluid coolant and stabilizer. Some examples of the types of equipment that potentially contain PCBs or PCB-contaminated oil include electrical equipment such as transformers (pad-mounted or pole-mounted), capacitors, and high-voltage, liquid-filled switches.

ERM did not identify transformers or other such equipment on the subject property. However, a hydraulic lift was previously located in Building 3. The post for the lift had been removed; however, no information was available regarding removal of the associated equipment, such as the hydraulic fluid container. Based on the dates of the Port of Oakland occupancy (beginning in the early 1970s), there is a potential for former hydraulic fluid to have contained PCBs.

3.9 VISUAL INDICATIONS OF ON-SITE IMPACTS

As indicated above, surface staining was observed at both interior and exterior areas of the subject property. Additionally, remnants of equipment associated with vehicle maintenance and vehicle washing, a former solvent storage area, and an asphalt patch from a former UST removal were observed at the subject property. Information related to the above items is provided in applicable sections of this report.

3.10 ASBESTOS-CONTAINING MATERIALS

Asbestos was banned in most friable building materials (spray-applied surfacing materials and thermal system insulation) in 1978, but the Occupational Safety and Health Administration deems spray-applied surfacing materials, thermal system insulation materials, and vinyl flooring materials as "presumed asbestoscontaining materials" if they are present in pre-1981 buildings (Title 8 of the California Code of Regulations Section 5208).

ERM was provided with a *Summary Report: Bulk Asbestos and Lead-Based Paint Survey*, 205-209 *Brush Street*, *Oakland*, *California*, prepared by SCA Environmental, Inc. (SCA), dated September 19, 2001. According to the SCA report, a "partial survey" for asbestos-containing materials was conducted at the subject property building in 2001. Materials that were found to contain asbestos included the following:

Building 1: duct tape on roof ventilation system, insulation on wall-mounted flues, 9-inch light brown floor tile and mastic, 12-inch yellow and brown floor tile and mastic, 12-inch dark brown floor tile and mastic, 12-inch tan floor tile and mastic, 9-inch brown and yellow floor tile and mastic, 9-inch maroon floor tile and mastic, glue behind wood paneling, and green and white wall tiles and grout (asbestos in glues). Materials found to contain <1% asbestos included wallboard and joint compound. Fire doors were not tested, and were assumed to contain asbestos.

Building 2: skylight glazing, 12-inch tan floor tile and mastic, 12-inch tan with brown floor tile and mastic, 12-inch gray floor tile and mastic, tar and felt roofing, roof patching, interior window glazing. Wallboard and joint compound was found to contain <1% asbestos, and transite flues were assumed to contain asbestos.

Building 3: roof patching. Wallboard and joint compound was found to contain <1% asbestos.

ERM's scope of work for this Phase I did not include an asbestos survey, and the findings of SCA's survey were not confirmed during ERM's site visit.

3.11 LEAD-BASED PAINT

Lead-based paint was used widely throughout the interiors and exteriors of buildings prior to 1978, primarily due to its strength and overall durability.

Based on SCA's 2001 report, lead-based paint was identified in Building 1 in green ceramic tile glazing, beige and brown exterior stucco paint, and pink paint on a metal shed that was no longer located at the site at the time of ERM's site visit.

ERM's scope of work for this Phase I did not include a lead-based paint survey, and the findings of SCA's survey were not confirmed during ERM's site visit.

4.0 ASSESSMENT OF PAST LAND USE AND OPERATIONS

This section addresses past land use and operations at the subject property and the surrounding area, based on an interview with a representative of the property owner and review of historical records and photographs.

4.1 GENERAL INFORMATION

Based on an interview with personnel familiar with the subject property and review of historical photographs and records, the subject property was occupied by residences in the late 1800s, then a blacksmith shop, carpenter shop, and hotel in the early 1900s. By the early 1950s, the subject property was occupied by a retail store, junk yard, machine shop, and restaurant, and by the late 1950s, a truck repair and cleaning facility was also located onsite. By the late 1960s, a paint and varnish facility, including an exterior varnish tank, was located on the subject property. The Port of Oakland's Facilities Operations and Maintenance facility was first located on the site in the early 1970s.

Adjacent and surrounding properties were a mixture of vacant land and residences in the late 1880s, with the exception of a foundry located in the vicinity to the west of the subject property. By the early 1900s, junk yards, a box factory, and iron works facility were located at surrounding properties. Development of commercial and light industrial facilities increased until the late 1960s, and the surrounding areas have been developed with such facilities since that time.

4.2 PREVIOUS ENVIRONMENTAL REPORTS

ERM was provided with the following previous environmental reports for the site:

- Summary Report: Bulk Asbestos and Lead-Based Paint Survey, 205-209 Brush Street, Oakland, California, prepared by SCA, dated 19 September 2001;
- Letter report, Data Summary Tables and Figures, Third and Brush Street Site, Port of Oakland, Oakland, California, prepared by Iris Environmental (Iris), dated 19 November 2001; and
- *Underground Storage Tank Removal, 209 Brush Street, Oakland, California,* prepared by Geomatrix, dated July 2003.

Based on the SCA report, a "partial survey" for lead-based paints, asbestoscontaining construction materials, and associated environmental hazards was conducted at the subject property. The SCA report indicated that numerous materials in the building were found to contain asbestos, and various areas within the buildings were found to contain lead-based paint. The asbestos and lead-based paint survey results are presented in Sections 3.10 and 3.11, respectively. Additionally, the report indicated that fluorescent fixtures, suspected to contain PCB ballasts and mercury-containing lamps, and mercury thermostatic switches for the ventilation system were observed within the buildings.

The Iris letter report indicates that a subsurface investigation was conducted at the subject property, including soil and groundwater sampling, with detections found for Total Petroleum Hydrocarbons as gasoline (TPHg); TPH as diesel (TPHd); benzene, toluene, ethylbenzene, and xylenes (BTEX); total lead; and methyl tert-butyl ether (MTBE). The information provided in the letter report included figures and tables; however, no text describing the purpose or scope of the investigation was included. Based on the figures reviewed, it appears that the sample locations were adjacent to the former USTs, located in the westerncentral portion of the site. Soil sample results included detections of up to 6,900 milligrams per kilogram (mg/kg) diesel; 4,000 mg/kg motor oil; 11,000 mg/kg gasoline; 40,000 micrograms per kilogram (µg/kg) benzene; 74,000 µg/kg toluene; 150,000 µg/kg ethylbenzene; 310,000 µg/kg m,p-xylenes; 100,000 µg/kg o-xylene; and 24,000 mg/kg lead. Groundwater sample results include detections of up to 97,000 micrograms per liter (μ g/L) gasoline; 11,000 μ g/L diesel; 8,000 μg/L benzene; 15,000 μg/L toluene; 2,300 μg/L ethylbenzene; 8,700 μg/L m,p-xylenes; and 3,800 μg/L o-xylene. No conclusions or further information was provided in the documents received.

The 2003 UST report indicates that one 1,000-gallon diesel tank and one 10,000-gallon gasoline tank, along with associated fuel dispensers, piping, concrete and soil overlying the UST, were removed from the site under the oversight of the OFSA in 2003. According to the report, the USTs were installed in the western-central portion of the site in 1987, and were upgraded in 1998. In April 2002, the USTs failed the OFSA annual tank monitoring test, and the tanks were disconnected. During removal, soil beneath the tanks was observed to be stained, and a strong hydrocarbon odor was reportedly noted. Additional excavation to the west, north and south, was not conducted after tank removal due to the proximity of Market Street to the west and the limited concrete cutting to the north and south of the excavation; however, additional soil was removed from the east wall of the excavation.

Geomatrix collected soil and groundwater samples from the excavation. Soil sample results were reported with detections up to 11,000 mg/kg TPHg; 720 mg/kg TPHd; 0.92 mg/kg benzene; 880 mg/kg toluene; 270 mg/kg ethylbenzene; 1,510 mg/kg total xylenes; 0.14 mg/kg MTBE; and 5.2 mg/kg

lead. Groundwater sample results were reported as 19,000 μ g/L TPHg; 2,100 μ g/L TPHd; 610 μ g/L benzene; 2,500 μ g/L toluene; 700 μ g/L ethylbenzene; 3,430 μ g/L total xylenes; 1,200 μ g/L MTBE; and 140 μ g/L lead. As of the date of this report, the OFSA has not required additional investigation or remediation activities at the site; however, a case closed status has not been granted.

4.3 EVALUATION OF HISTORICAL INFORMATION SOURCES

To determine past uses of the subject property and surrounding properties, ERM reviewed historical sources of information as outlined below. Copies of the aerial photographs, topographic maps, Sanborn maps, and city directory report that were provided by EDR are also included in Appendix B.

Table 1 Summary of Historical Records Reviewed

	Name/Yea	rs Reviewed
Source of Information	Subject Property	Adjacent Properties
Interview with current occupant and/or owner	Mr. Tim Leong and Mr. Justin Taschek, both with Port of Oakland	Mr. Tim Leong and Mr. Justin Taschek, both with Port of Oakland
Interview(s) with past owners/occupants, (if appropriate)	Contact information not readily available	Not Applicable
Interview(s) with owner/occupants of neighboring and nearby properties (in cases of abandoned subject property)	Not Applicable	Not Applicable
Aerial Photographs	1939, 1946, 1958, 1968, 1974, 1984, 1993, 1999, 2005, 2009, 2010, and 2012	1939, 1946, 1958, 1968, 1974, 1984, 1993, 1999, 2005, 2009, 2010, and 2012
Sanborn Fire Insurance Map	1889, 1902, 1912, 1951, 1952, 1957, 1958, 1961, 1967, and 1970	1889, 1902, 1912, 1951, 1952, 1957, 1958, 1961, 1967, and 1970
Topographic Maps	1895, 1915, 1948, 1949, 1959, 1968, 1973, 1980, and 1993	1895, 1915, 1948, 1949, 1959, 1968, 1973, 1980, and 1993

	Name/Years Reviewed

City Directories	1928, 1955, 1962, 1967, and 1970	1920, 1925, 1926, 1928, 1932, 1933, 1938, 1940, 1943, 1945, 1946, 1950, 1951, 1955, 1962, 1965, 1967, 1970, 1973, 1975, 1979, 1980, 1982, 1984, 1986, 1991, 1992, 1996, 2000, 2002, 2006, 2007, and 2012	

4.3.1 Subject Property

Based on a review of the 1889 Sanborn map, the site was occupied by two dwellings in the central eastern portion and a boarding house in the northwestern corner. The remaining site areas are shown as vacant, undeveloped land. The 1895 topographic map depicts small, residential-type structures on the site. The 1902 Sanborn map is similar to the 1889 map, with the addition of a water tank in the center of the site. On the 1912 Sanborn map, a blacksmith shop is located in the southeastern corner of the site, a carpenter shop is located in the southwestern corner, and a hotel is located in the northwestern corner. A storage building and vacant warehouse are located in the western central portion of the site. Dwellings remain in the eastern portion, and the water tank remains in the center. The 1915 topographic map is similar to the 1895 map. The 1939 aerial photograph is of poor quality; however, the site appears to be occupied by several buildings as shown on the 1912 Sanborn map. On the 1946 aerial photograph, the site appears to be occupied by several commercial buildings. The 1948 and 1949 topographic maps depict the subject property in a fully developed area in which individual structures are not depicted. On the 1951 Sanborn map, a retail store is located in the northwestern corner of the site, with a junk yard, then undeveloped land in the southern portions. A machine shop, restaurant, and other unidentifiable features are located in the eastern portion of the subject property. The 1952 Sanborn map is similar to the 1951 map, with the former junk yard labeled as "junk" with a pipe shop adjacent to the east, and a junk yard adjacent to the south on the site. On the 1957 and 1958 Sanborn maps, retail stores and restaurants are located in the northwestern portion of the site, the pipe shop is depicted as a storage building, and the machine shop remains in the eastern central portion. A truck repair and cleaning facility is located in the southeastern portion of the site. The buildings appear to be in the location of the current structures located on the subject property. The southwestern portion of the site is depicted as vacant, undeveloped land. The 1958 aerial photograph appears to be similar to the 1957 Sanborn map. The 1961 Sanborn map is similar to the 1958 map; however, the truck repair facility is depicted as a vacant warehouse. On the 1967 and 1970

Sanborn maps, the vacant warehouse in the southeastern portion of the site is depicted as a paint and varnish facility, with a laboratory in the northern portion and an aboveground varnish tank to the western exterior of the building. On the 1970 Sanborn map, the storage building in the center of the site is no longer present, and the northwestern building is shown as a warehouse. The 1968 and 1970 aerial photographs are of poor quality; however, appear to be similar to conditions on the 1970 Sanborn map. On the 1984 through 2005 aerial photographs, the subject property appears to be occupied by the current buildings.

The site address of 205 Brush Street is listed in the 1928 city directory as "Torrein Monat R" and "Trore Antonil An Oelal lab H." The site address of 209 Brush Street is listed in the 1955 city directory as Goldenson Lewis W Systems Services, System Lift Truck Service, and System Services. This address is listed as Flecto Company, The Paint Manufacturers in the 1962 and 1967 directories, and as Dennis Fender, Flecto Company, and Curlee key in the 1970 directory.

Additional possible subject property address, as noted in the 1912 and later Sanborn maps, may have included 204 through 232 Market Street and 201 through 217 Brush Street. City directory listings on Brush Street included a restaurant from 1928 through 1950; Bay Cities Construction Company and Terry's Machinery in 1955; Terry's Machinery, The Estes Lewis Oil Company, and Quaker State Oil Distributors in 1962; and individual's names in 1967, 1970, and 1980. Market Street listings included Bay City Junk & Bottle Company in 1920; and Admiral Sales Company and Old Corner Bar in 1955.

4.3.2 Adjacent Properties and Surrounding Area

Based on a review of the 1889 Sanborn map, the northeastern adjacent property is depicted as vacant, undeveloped land. Undeveloped land is located to the south, beyond 2nd Street. Undeveloped land and residences are located to the north, beyond 3rd Street, and to the east, beyond Brush Street. Undeveloped land and a foundry are located to the west, beyond Market Street. The 1895 topographic map depicts the surrounding area as developed with streets; however, individual structures are not depicted. The 1902 Sanborn map is similar to the 1889 Sanborn map; however, the former foundry is now hay storage and the vacant areas to the east are occupied by a feed mill. On the 1912 Sanborn map, a junk yard is located in the previously vacant lot adjacent to the west of the subject property, a box factory is located to the southwest, the former feed mill is depicted as a storage building, and an iron works facility is located to the southeast, beyond the intersection of Brush and 2nd Streets. The 1915 topographic map is similar to the 1895 map.

On the 1939 and 1946 aerial photographs, commercial/light industrial facilities are shown to the west, south and east of the subject property. Areas to the north appear to be occupied by residential or small commercial structures. On the 1951 Sanborn map, a steel warehouse and vacant land are located to the west of the site; a tire recapping facility, residence, and vacant land are to the north; a boiler sales facility is to the northeast; a storage yard is to the east; and an ice and cold storage facility is located to the south of the site. On the 1952 Sanborn map, an ice and cold storage facility is also located to the east-southeast of the subject property. The 1957, 1958, and 1961 Sanborn maps, as well as the 1958 aerial photograph, are similar to the 1952 Sanborn map.

On the 1967 and 1970 Sanborn maps, a cold storage facility is located to the west of the subject property, and an ice and cold storage facility is located to the southwest. A restaurant and bar are located adjacent to the northeast of the site, with undeveloped land further north, across 3rd Street. An industrial chemical warehouse is located northeast of the site, across the intersection of 3rd and Brush Streets. Vacant land, then a machinery shop and foundry, are located to the east, beyond Brush Street; a parcel delivery station is to the southeast; and vacant land and an office are located to the south of the site, beyond 2nd Street. The 1968 through 1999 aerial photographs are similar to the 1970 Sanborn map. The 2005 aerial photograph shows the adjacent areas in similar conditions as to those observed during the site visit.

City directory listings for the surrounding areas consisted of residences and some commercial businesses beginning in the 1920s, with increased commercial and industrial uses until the current time. Adjacent listings are similar to those depicted on the Sanborn maps and described above.

At the time of the site visit, ERM observed land use in the surrounding areas to be primarily commercial and light industrial, with a vacant bar and office to the northeast, a CNG gas station and parking/storage lots to the south, and commercial facilities to the east and west. Based on the EDR report, no oil or water wells are currently located within ½ mile of the subject property.

4.3.3 Non-Regulatory Interviews

Information obtained from site personnel is discussed in the applicable sections throughout this report.

5.0 DATABASE AND GOVERNMENT RECORDS REVIEW

This section summarizes ERM's review of environmental databases as well as government records, and discusses data gaps identified during the assessment.

5.1 GOVERNMENT RECORDS REVIEW/INTERVIEWS

ERM reviewed the GeoTracker database maintained by the SWRCB, the Envirostor database maintained by the DTSC, and the Envirofacts database maintained by the EPA. The site addresses are not listed on the Envirostor or Envirofacts databases. The site address of 205 Brush Street is listed on the GeoTracker database; however, based on the information reviewed, the listing is associated with the southern adjacent CNG station. Based on the database listing and a report entitled Removal Action Oversight and Documentation At Downtown Oakland CNG Station, 205/209 Brush Street, Oakland, CA, prepared by R&M and dated 16 October 2007, stained, odiferous soil was encountered during soil excavation associated with construction of the CNG station on the Port of Oakland-owned property in 2007. Although approximately 200 cubic yards of contaminated soil was removed, soil sampling identified TPHg up to 6,500 mg/kg; TPHd up to 1,300 mg/kg; xylenes up to 23,000 mg/kg; 1,2,4trimethylbenzene up to 60 mg/kg; 1,3,5-trimethylbenzene up to 21 mg/kg; and propylbenzene up to 13 mg/kg remaining in the soil. Impacted soil was removed only in the area needed for the footprint of the station to the water table. Based on the 2007 report, the soil contamination was considered to possibly be from a previous UST release at the Port of Oakland property adjacent to the north (the subject property). The case is listed as open – site assessment as of April 2007 on the GeoTracker database.

ERM also reviewed the Alameda County EHD database for site records and inspections related to hazardous materials and storage tanks. Based on a review of the EHD records, The Oakland Fire Department transferred the case related to the soil contamination identified at the CNG facility to the EHD in October 2007. A letter issued by the EHD, dated 7 April 2008, to the Port of Oakland, indicated that a Spills, Leaks, Investigations, and Cleanups (SLIC) case was opened for the CNG station. No further information regarding the SLIC case was included in the EHD files.

ERM also reviewed available records from the Assessor's Office website. Information obtained from the Assessor's Office is discussed in the applicable sections throughout this report. The subject property is not located on tribal lands or within tribal jurisdiction.

5.2 ENVIRONMENTAL DATABASE SEARCH

ERM contracted EDR to conduct a database search for agency records. The database report, presented in Appendix C, defines and summarizes the ASTM-required databases reviewed in the EDR report and notes if any sites (including the subject property) were identified within the ASTM-specified radii for each database. The locations of the sites identified in the EDR report were evaluated to determine which sites were located within the ASTM-specified search distance from the subject property boundary. Only those sites within the ASTM-specified distances are discussed below.

It should be noted that the computerized geocoding technology used in the database search is based on available census data and is only accurate to ±300 feet. The EDR report provides a list of unmapped sites for which inadequate location information was provided. ERM has reviewed the list of "unmapped" sites to determine if these sites are within the study radius. Based on maps of the area, the required database search radius for a given database, and the site reconnaissance, it appears that none of the unmapped sites are within the designated search distances for each database.

Sites identified within the study radii, if present, are evaluated to determine whether they are likely to have adversely impacted the subject property. The criteria used to evaluate the potential for adverse impact to the subject property include:

- Distance from the subject property;
- Expected depth and direction of groundwater and surface water flow;
- Expected storm water flow direction; and
- The presence/absence of documented contaminant releases at the identified sites that have not been remedied to the satisfaction of regulators.

The identification of a site as potentially upgradient or downgradient is based on the expected direction of groundwater flow to the south-southwest as discussed in Section 2.4.

5.2.1 Subject Property

The subject property address of 205 Brush Street was identified as harbor Facilities Garage on the California Facility Inventory Database (CA FID) UST, Statewide Environmental Evaluation and Planning System (SWEEPS) UST, and Historic UST (HIST UST) databases as having had one 8,000-gallon unleaded gasoline tank, one 2,000-gallon premium gasoline tank, and one 1,000-gallon diesel tank. Based on interviews with Port of Oakland personnel familiar with

the site, and regulatory agency documents reviewed, including a tank removal report, it appears that the listing is incorrect. The tanks located at the site consisted of one 10,000-gallon gasoline UST and one 1,000-gallon diesel UST, both of which were removed in 2003. Information regarding the removal of the former USTs is described in Section 4.2.

The subject property address of 205 Brush Street is also listed as Port of Oakland/Downtown Oakland CNG Station on the Alameda County Contaminated Sites (CS) and SLIC databases. Based on the database report, approximately 200 cubic yards of soil was excavated, and soil contaminated with TPH and volatile organic compounds (VOCs) remains in place. The CNG station is not located on the subject property, but rather, adjacent to the south. The SLIC status is listed as open – site assessment. As described in Section 4.2, the contamination is considered to originate from the subject property, north of the CNG station.

5.2.2 Surrounding Properties

The database search identified several regulated properties on databases indicative of environmental impairment and upgradient of the subject property, as discussed below. Facilities which have received case closure status are considered to be unlikely to have adversely impacted the subject property, and therefore, are not discussed.

Safety Kleen Corporation is located at 404 Market Street, approximately 1/10 mile north-northeast of the site. This facility is listed on the Leaking Underground Storage Tank (LUST) and Alameda County CS databases as having had chlorinated hydrocarbons, trichloroethylene (TCE), vinyl chloride, and Stoddard solvent/mineral spirits/distillates in the groundwater and soil vapor at the facility. The facility is used for storage of waste materials in a warehouse prior to transfer to other facilities for processing. Operations began in 1975. Soil sampling conducted in 1986 indicated TPH contamination in the soil and groundwater. A TPH and VOC vapor plume was identified at the facility in 1988. A soil vapor extraction system was in operation from 1993 through 1998. Safety Kleen entered into a Corrective Action Consent Agreement with the DTSC in 2009 and submitted a Resource Conservation and Recovery Act Facility Investigation (RFI) Work Plan in 2010. The facility is also listed on the Treatment, Storage, and Disposal Facility (TSDF), Corrective Actions (CORRACTS), and UST databases related to the above information. The facility is listed with an open - site assessment status on the GeoTracker database. No further information regarding subsurface investigations or extent of the groundwater and soil vapor plumes are available on the GeoTracker database. Based on the

- information available, the potential for this facility to have adversely impacted the subject property cannot be ruled out.
- Francis Plating of Oakland is located at 785 7th Street, approximately 1/5 mile north-northeast of the site. This facility is listed on the Envirostor database having been a metal plating facility, with a Preliminary Endangerment Assessment (PEA) Report completed in 2002. The report concluded that based on confirmation sampling conducted at the facility, no further action was required. However, the facility is listed with an open - site assessment status on the SLIC database for solvent, lead, and nickel contamination in groundwater. The facility was reportedly used for plating from 1957 until 1998, and was then abandoned. Soil and groundwater at the facility were reportedly impacted by metals, including hexavalent chromium, and VOCs, including TCE. The source area was reportedly removed and capped with concrete. According to the GeoTracker database, the facility is under the oversight of the EHD. Based on the most recent information available on the GeoTracker database, dated June 2012, the contaminated groundwater and soil vapor plumes do not appear to have extended beyond the facility property boundary. Based on the available information, it is unlikely that this facility has adversely impacted the subject property.
- Shell Service Station is located at 610 Market Street, approximately 1/5 mile north-northeast of the subject property. This facility is listed on the LUST and Alameda County CS databases as having had a gasoline release affecting groundwater. The status is listed as "open assessment and interim remedial action." Based on the GeoTracker database, the facility was eligible for closure as of April 2013. Based on the regulatory status, it is unlikely that the facility has adversely impacted the subject property.
- AMCO Chemical is located at 1414 Third Street, approximately ¾ mile west-northwest of the site. This facility is listed on the National Priority List (NPL). The property was occupied by a chemical facility from the 1960s until 1989. Based on the EDR report, the area of concern is located more than ½ mile crossgradient from the subject property. Based on the available information, it is unlikely that this facility has adversely impacted the subject property.

6.0 DATA GAPS

The following table summarizes the data gaps identified during the development of this ESA. The significance of the data gaps with respect to the conclusions of this assessment is presented in the table below. The data gaps are not deemed to be a significant constraint on identifying conditions indicative of releases or threatened releases to the subject property; therefore, the significance of the data gaps is rated low.

Table 2 Data Gap Summary

Data Gap	Sources Consulted to Address Data Gap	Significance ¹
ERM did not interview previous subject property owners because contact information for the owners was not readily available.	Interview with a representative of the current property owner who is familiar with the subject property history, and review of historical maps and photographs.	Low
ERM was not provided with chain-of-title and environmental liens reports.	Interview with a representative of the current property owner who is familiar with the subject property history, and review of historical maps and photographs.	Low

_

Significance of data gaps to identify conditions indicative of releases or threatened releases to the subject property is rated from low to high. Low significance indicates that additional information to fill the data gaps is likely to have no impact on the conclusions reached in this report. A medium rating indicates that additional information may prove valuable, but may not significantly alter the conclusions of this report. High significance indicates that it is the consultant's opinion that additional investigation (either from reports or field sampling) is required to address the data gap.

7.0 USER-PROVIDED INFORMATION

ERM contacted PG&E (the "Client" or "User") and the Port of Oakland (the "Owner") to determine the status of potential environmental concerns at the subject property. The following information on the subject property was requested:

- An evaluation of the presence of Environmental Cleanup Liens for the subject property;
- Activity and Use Limitations such as engineering controls (e.g., slurry walls, caps) and land use restrictions or institutional controls (e.g., deed restrictions, covenants) that may be in place for the subject property;
- Specialized Knowledge that includes personal knowledge or experience related to the subject property or nearby properties based on professional experience or knowledge of the subject property;
- Fair Market Value to evaluate whether a purchase price is significantly below Fair Market Value;
- Obvious Indicators that involve past or present spills, stains, releases, or cleanups on or near the subject property; and
- Common Knowledge about specific chemicals, possible contamination, or past use of the subject property and surrounding area.

The *User Questionnaire for Phase One Additional Inquiries* (User Questionnaire) was completed by Mr. Keith Winn, with PG&E. The *Owner/Key Site Manager Questionnaire for Phase One Additional Inquiries* (Owner Questionnaire) was completed by Mr. Jeff Jones, with the Port of Oakland. Responses to the User and Owner Questionnaires are addressed in the following sections. Copies of the User and Owner Questionnaires are presented in Appendix D.

7.1 TITLE RECORDS

PG&E did not request a chain-of-title to be ordered by ERM.

7.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

PG&E did not request an environmental lien search report to be ordered by ERM. No environmental liens or activity and use limitations were reported for the subject property in the Owner Questionnaire.

7.3 SPECIALIZED KNOWLEDGE

The Owner provided specialized knowledge regarding former and current activities associated with the subject property, as provided in applicable sections of this report.

7.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The User and Owner have access to commonly known and reasonably ascertainable information associated with the subject property. The User provided this information to ERM prior to the site visit, and the Owner's representative provided such information during the site visit. Information from the User and Owner is presented throughout this report in the relevant sections.

7.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The User indicated they do not have access to information on valuation of the relationship of the purchase price to fair market value if uncontaminated.

7.6 OWNER AND OCCUPANT INFORMATION

The following information regarding the subject property has been identified:

Entity	Name
Subject property owner	Port of Oakland
Current subject property occupant	Vacant/Port of Oakland storage

7.7 REASON FOR PERFORMING PHASE I

This Phase I ESA was performed on behalf of PG&E to assess potential environmental liabilities associated with surface and/or subsurface impacts from past and current operations at the subject property.

8.0 CONCLUSIONS

ERM conducted a Phase I ESA at the subject property. Our conclusions and opinions are based on a scope of work that followed the requirements set forth in ASTM Standard E 1527-05 and 40 CFR 312. A summary of ERM's conclusions and opinions is presented below.

Recognized Environmental Conditions

ERM has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 of the former Port of Oakland Facilities Operations and Maintenance property located at 205/209 Brush Street identified with APN 001-0111-005-01, in Oakland, Alameda County, California. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report.

Based on the data obtained during the site visit, the environmental database review, and an interview with personnel familiar with the subject property and its history, this assessment has revealed the following RECs in connection with the subject property:

One 1,000-gallon diesel UST and one 10,000-gallon gasoline UST, along with associated fuel dispensers, piping, concrete and soil overlying the USTs, were removed from the site under the oversight of the OFSA in 2003. According to an Underground Storage Tank Removal, 209 Brush Street, Oakland, California, prepared by Geomatrix, dated July 2003, the USTs were installed in the western-central portion of the site in 1987, and were upgraded in 1998. In April 2002, the USTs failed the OFSA annual tank monitoring test, and the tanks were disconnected. During removal, soil beneath the tanks was observed to be stained, and a strong hydrocarbon odor was reportedly noted. Additional excavation to the west, north and south, was not conducted after tank removal due to the proximity of Market Street to the west and the limited concrete cutting to the north and south of the excavation; however, additional soil was removed from the east wall of the excavation. Geomatrix collected soil and groundwater samples from the excavation. Soil sample results were reported with detections up to 11,000 mg/kg TPHg; 720 mg/kg TPHd; 0.92 mg/kg benzene; 880 mg/kg toluene; 270 mg/kg ethylbenzene; 1,510 mg/kg total xylenes; 0.14 mg/kg MTBE; and 5.2 mg/kg lead. Groundwater sample results were reported as 19,000 µg/L TPHg; 2,100 ug/L TPHd; 610 μg/L benzene; 2,500 μg/L toluene; 700 μg/L ethylbenzene; 3,430 μg/L total xylenes; 1,200 μg/L MTBE; and 140 μg/L lead. As of the date of this report, the OFSA has not required additional investigation or

- remediation activities at the site; however, a case closed status has not been granted. The open case status is considered to be an REC for the site.
- The subject property address of 205 Brush Street is listed as Port of Oakland/Downtown Oakland CNG Station on the Alameda County CS and SLIC databases in the EDR report, on the SWRCB GeoTracker database, and on the Alameda County EHD database. Based on the EDR report and regulatory agency databases, the above listings are associated with the southern adjacent CNG station. According to the records reviewed, and a report entitled Removal Action Oversight and Documentation At Downtown Oakland CNG Station, 205/209 Brush Street, Oakland, CA, dated 16 October 2007, stained, odiferous soil was encountered during soil excavation associated with construction of the CNG station on the Port of Oaklandowned property in 2007. Approximately 200 cubic yards of soil was excavated, and soil contaminated with TPH and VOCs reportedly remains in place. Based on the 2007 report, the soil contamination was considered to possibly be from a previous UST release at the Port of Oakland property adjacent to the north (the subject property). The case is listed as open - site assessment as of April 2007 on the GeoTracker and EHD databases. The case open status and potential source being the subject property represents an REC.
- Based on historical documents reviewed, the subject property has a history of commercial and industrial uses associated with potential environmental concerns. In the early 1900s, the site was occupied by a blacksmith shop and carpenter shop. By the early 1950s, the subject property was occupied by a junk yard and machine shop, and by the late 1950s, a truck repair and cleaning facility was also located onsite. By the late 1960s, a paint and varnish facility, including an exterior varnish tank, was located on the subject property. The Port of Oakland's Facilities Operations and Maintenance facility was first located on the site in the early 1970s. The Port of Oakland's operations included construction offices and diver's storage, including boat storage; a vehicle maintenance facility, including a hydraulic lift; a vehicle wash station; a paint shop, and a fueling station, including gasoline and diesel USTs, as described above. Other than sampling in the former UST location, subsurface investigations have not been conducted to assess the potential impacts from historical site uses. The long history of commercial and industrial activities at the site, and associated potential subsurface impacts, represent an REC for the subject property.

Historical Recognized Environmental Conditions

This assessment has revealed no evidence of historical RECs in connection with the subject property.

De Minimis or Other Potential Issues

The following potential issue and *de minimis* conditions were identified:

- Safety Kleen Corporation is located at 404 Market Street, approximately 1/10 mile north-northeast of the site. This facility is listed on the LUST and Alameda County CS databases as having had chlorinated hydrocarbons, TCE, vinyl chloride, and Stoddard solvent/mineral spirits/distillates in the groundwater and soil vapor at the facility. A TPH and VOC vapor plume was identified at the facility in 1988. Safety Kleen entered into a Corrective Action Consent Agreement with the DTSC in 2009 and submitted a RFI Work Plan in 2010. The facility is listed with an open site assessment status on the GeoTracker database. No further information regarding subsurface investigations or extent of the groundwater and soil vapor plumes are available on the GeoTracker database. Based on the information available, the potential for this facility to have adversely impacted the site cannot be ruled out, therefore, it is considered to be a potential issue for the subject property.
- ERM was provided with a *Summary Report: Bulk Asbestos and Lead-Based Paint Survey, 205-209 Brush Street, Oakland, California,* prepared by SCA, dated September 19, 2001. According to the SCA report, a "partial survey" for asbestos-containing materials was conducted at the subject property building in 2001. The survey report indicated that several ACMs were identified in each of the subject property buildings. The presence of ACMs is considered to be a *de minimis* condition.
- SCA's 2001 report indicated that lead-based paint was identified in ceramic tile glazing and exterior stucco paint in Building 1. The presence of lead-based paint is considered to be a *de minimis* condition.
- SCA's 2001 report indicated that fluorescent fixtures, suspected to contain PCB ballasts and mercury-containing lamps, and mercury thermostatic switches for the ventilation system were observed within the buildings. The presence of these items is considered to be a *de minimis* condition.

10.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS CONDUCTING THIS ASSESSMENT

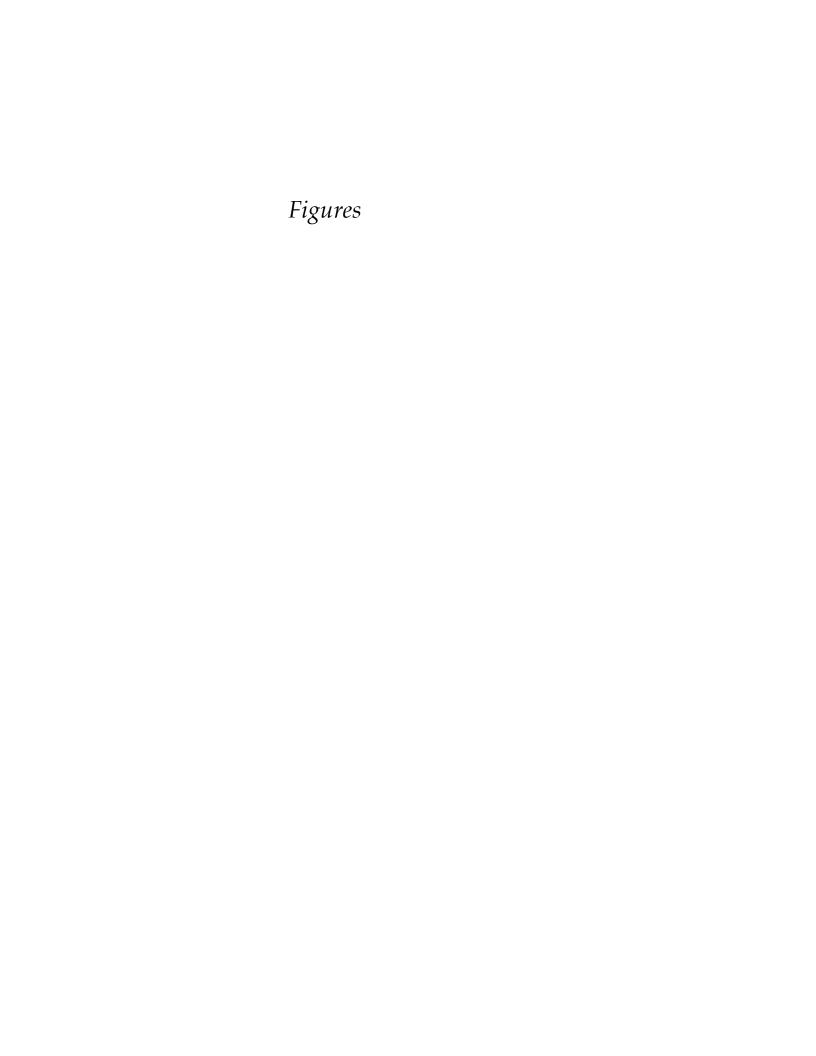

This ESA was conducted by Ms. Deborah Scanlon Wall and Ms. Bailey Blosser of ERM. Ms. Deborah Scanlon Wall and Mr. Jim Warner of ERM reviewed the contents of this report. The professional qualifications for Ms. Scanlon Wall and Mr. Warner are included in Appendix E.

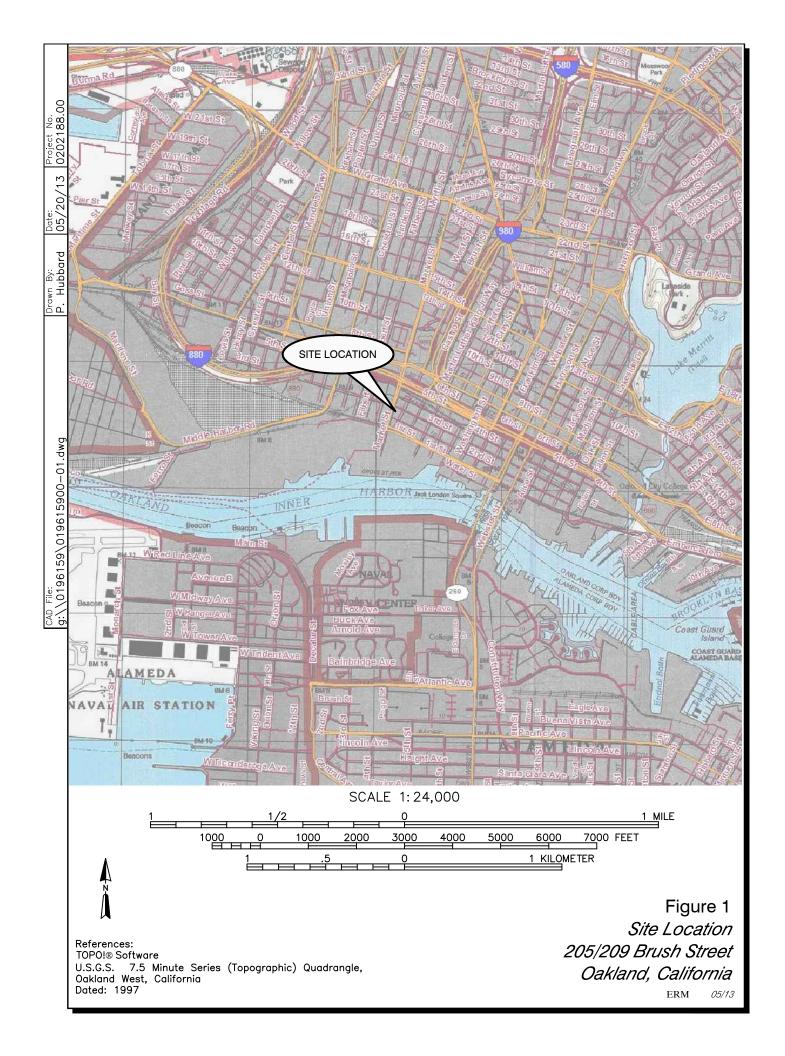

The signatures for Ms. Scanlon Wall and Mr. Warner are affixed onto the cover of this report. Ms. Scanlon Wall and Mr. Warner are the designated Environmental Professionals for this project and prepared the following declaration:

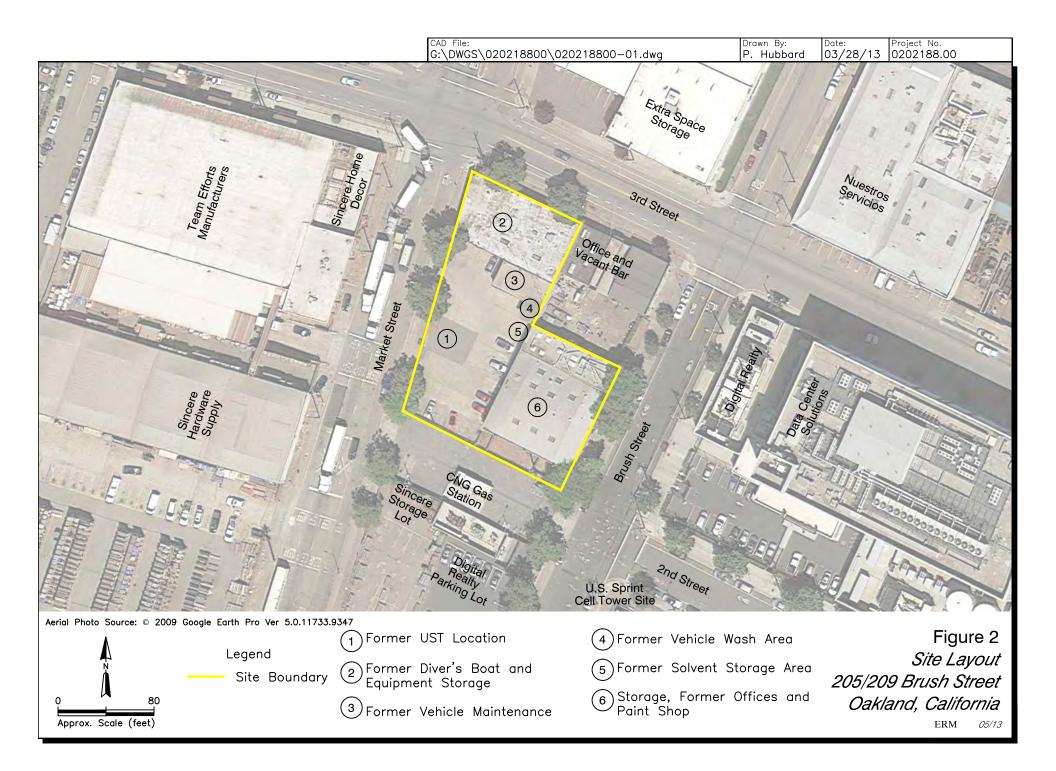

- We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10.
- We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

11.0 LIMITATIONS

The innocent landowner, contiguous owner, and prospective purchaser defenses to liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) require that a person acquiring property conduct an all appropriate inquiry with respect to the subject property. ERM has conducted this environmental assessment in accordance with the standards for conducting an all appropriate inquiry set forth at 40 CFR 312. Those standards require the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations and exercise of discretion. Professional judgments expressed herein are based on the facts currently available within the limits of the existing data, and data gaps identified herein, scope of work, budget, and schedule. Those standards also require that the client undertake certain additional inquiries. In addition, the liability defenses under CERCLA require, among several other things, that the client stop any continuing releases after the acquisition, prevent any future threatened releases and prevent or limit human, environmental or natural resource exposure to any hazardous substance released at the subject property. Therefore, except as provided above, ERM makes no warranties, express or implied, including, without limitation, warranties as to merchantability or fitness for a particular purpose, including any warranty that this Phase I assessment will in fact qualify the client for the innocent landowner, contiguous property owner or prospective purchaser defense to liability under CERCLA. ERM's assessment is limited strictly to identifying recognized environmental conditions associated with the subject property. Results of this assessment are based upon the visual site inspection of readily accessible areas of the subject property conducted by ERM personnel, information from interviews with knowledgeable persons regarding the site, information reviewed regarding historical uses, information provided by contacted regulatory agencies, and review of publicly available and practically reviewable information identifying current and historical uses of the property and surrounding properties. All conclusions and recommendations regarding the subject property represent the professional opinions of the ERM personnel involved with the project, and the results of this report should not be considered a legal interpretation of existing environmental regulations. ERM assumes no responsibility or liability for errors in the public data utilized, statements from sources outside of ERM, or developments resulting from situations outside the scope of this project.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Executive Summary

Findings

Thank you for your business.Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2013 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

205 BRUSH STREET OAKLAND, CA 94607

COORDINATES

Latitude (North): 37.7993000 - 37° 47' 57.48" Longitude (West): 122.2838000 - 122° 17' 1.68"

Universal Tranverse Mercator: Zone 10 UTM X (Meters): 563053.4 UTM Y (Meters): 4183583.8

Elevation: 12 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 02/01/2013 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AMCO CHEMICAL	1414 THIRD STREET	WNW 1/2 - 1 (0.603 mi.)	0	11

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
FRANCIS PLATING OF OAKLAND INC	785 7TH ST	NNE 1/8 - 1/4 (0.216 mi.)	L62	214

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

FRANCIS PLATING OF OAKLAND INC	785 7TH ST	NNE 1/8 - 1/4 (0.216 mi.)	L62	214

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 19 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 03/13/2013 has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 03/13/2013 has revealed that there are

27 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 03/18/2013 has revealed that there are 35 LUST sites within approximately 0.5 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 11/11/2011 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

PG AND E OAKLAND	50 MARKET ST BTWN 1ST A	ESE 0 - 1/8 (0.046 mi.)	C8	29
PG AND E GAS PLANT OAKLAND	FIRST AND WASHINGTON	ESE 1/4 - 1/2 (0.348 mi.)	R94	286

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past

sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 7 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 8 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Local Agency: ALAMEDA COUNTY LOP

RB Case Number: NA

File Location: Stored electronically as an E-file

Under Investigation Potential Media Affected: Potential Contaminants of Concern: Diesel, Acetone, Gasoline

Site History: Not all historic documents for the fuel leak case may be available on

> GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at https://ehgis.acgov.org/dehpublic/dehpublic.jsp. Stained odiferous soil encountered during 2007 construction activities. Approximately 200 cu yds soil excavgted for off site disposal. Excavation sample analysis revealed up to 6,500 mg/kg TPHg, 1,300 mg/kg TPHd, 60 mg/kg 1,2,4-trimethylbenzene, 21 mg/kg 1,3,5-trimethylbenzene, and 13 mg/kg

propylbenzene remains in site soil.

Summary Details:

Conditions at Proposal April 30, 2003): The AMCO Chemical site AMCO) is part of a 0.83-acre property at 1414 Third Street in a mixed residential and light industrial area of Oakland, California. The property is bordered on the north by a vacant lot, on the west by residences, on the east by Nelson Mandela Parkway, and on the south by Third Street. A recently constructed elevated portion of the Interstate-880 I-880) freeway is located immediately across Third Street from the property. The property at 1401 Third Street) was historically occupied by Bobo s Junkyard. From the 1960s to 1989, the AMCO site was occupied by AMCO Chemical Company. AMCO operated a chemical distribution facility that included a warehouse, railroadspur, above-ground tanks, underground tanks, and drums used to transfer and store raw materials. In July 1988, the Oakland Fire Department observed leaking/rotting drums on the property. A subsequent emergency response investigation by AlamedaCounty and the U.S. Coast Guard revealed greater than 100 full and empty 5- and 55gallon weathered drums in an open area behind AMCO Chemical s main building. Stenciled labels on the drums indicated that the contents included acetone: 1,1,1-trichloroethane 1,1,1-TCA); methyl ethyl ketone; and dry-cleaning solvent. From 1989 to November 1998, DC Metals operated a scrap metal yard on the site. Cable Moore, Inc., currently uses the site for cable storage. Structures remaining on site include an office building, warehouse, and two small storage buildings. In June 1995, a construction crew noted odors at the intersection of Third Street and Nelson Mandela Parkway, while excavating a trench needed to relocate an underground electrical line in preparation for a

freeway project. Subsequent subsurface investigation by California Department of Transportation Caltrans), DC Metals, and EPA revealed the presence of volatile organic compounds VOCs) including vinyl chloride in soil, soilgas, and shallow ground water at the AMCO site, beneath Third Street, and at the 1401 Third Street property former Bobo s Junkyard). On December 5, 1996, the EPA Emergency Response Office initiated a removal action at the AMCO site that involved the construction of a ground water and soil vapor extraction SVE) treatment system. The EPA treatment system collection trench was excavated from December 5 through December 20, 1996. By December 23, 1996, the trench had been lined with a silt curtain, filled with gravel, and covered with a tarp. Cement was poured to permanently cover the trench on January 8, 1997. The treatment system operated from January 1997 through July 1998 and extracted approximately 7,000 pounds of VOCs, approximately 40 pounds of which were vinyl chloride. Operation of the system ceased in July 1998, due to community concern over the potential for a release of dioxins from the thermal oxidation unit. On December 5 and 14, 1996, during construction of the treatment system collection trench, the EPA On-Scene Coordinator observed shimmering vapors emanating from the open trench. SUMMA tm) canister sampling indicated the presence of vinyl chloride; methylene chloride; 1,1,1-trichloroethane TCA); and trichloroethene TCE) in the immediate area of the trench. In addition, one SUMMA canister sample collected from in front of a residence adjacent to the site contained TCE. The EPA conducted several sampling events on and adjacentto the AMCO site between 1997 and 2000. VOCs continued to be detected in soil, soil gas, and ground water on site. In September 1999, SUMMA canister samples were collected from the crawl spaces of three residences located adjacent to the site. Vinyl chloride was detected in the three crawl spaces at 0.02 to 0.045 parts per billion by volume ppby). There are 626 people living within a guarter of a mile of the source. There are also approximately three workers on site. Status September 2003):EPA is considering various alternatives for this site. The description of the site release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices. For more information about the ha ardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at http://www.atsdr.cdc.gov/toxfaq.html or by telephone at 1-888-42-ATSDR or 1-888-422-8737.

Background Info: The site was occupied by AMCO Chemical Corp. until December

1989. DTSC inspected the site on August 4, 1988. An order to Fence and Post the site was issued on August 8, 1988. On February 24, 1989 a Report of Violation was issued to correct violations related to leakage of hazardous waste from piping and containers; storage of hazardous waste in deteriorated or otherwise corroded conditions; and unlabeled waste containers. Soil and groundwater located outside of the site boundary were sampled by Caltrans and Southern Pacific Railroad. Elevated levels of VOC's (vinyl chloride,1,1-DCE,PCE,1,1,1-TCA, 1,2-DCE),

acetone, toluene and xylene have been found in soil and/or

groundwater.

Completed Info:

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Completion Report

Completed Date: 01/01/1997

Comments: US EPA implemented a removal action in 1997 to address high

concentrations of vinyl chloride at or near the AMCO site. A groundwater extraction and treatment system and a soil vapor extraction system were installed to address the vinyl chloride and other contaminants found in shallow groundwater and soils. Operation of this system ceased in July 1998 due to community concerns. US EPA conducted several sampling events on and adjacent to the site between

1997 and 2002.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

ELECTRIC GENERATOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Design/Implementation Workplan

Completed Date: 01/28/2013

Comments: The Remedial Design Implementation Plan (RDIP) involves excavation of

a portion of Jefferson Street where separate-phase petroleum product

(SPPH) is present. The scope involves shoring, excavation of approximately 1,700 cubic yards of oil-stained soil, transport of approximately 100 truckloads, and disposal at a licensed landfill. Groundwater will be pumped from the excavation, treated and discharged or stored in tanks temporarily prior to trucking to a treatment facility. The RDIP is being implemented as part of an approved Remedial Action Plan (RAP) cleanup program which is addressing residual contamination at the Site from former power plant operations. The RAP also includes groundwater monitoring, maintenance

of an impermeable cap across the Site, and land use restrictions.

Completed Document Type: Remedial Action Implementation Workplan

Completed Date: 05/05/2011

Comments: The workplan involves soil gas sampling, checking for separate phase petroleum hydrocarbons in shallow groundwater, and well destructions.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 08/31/2011

Comments: Temporary wells were installed to check for for free-phase petroleum product; smoke testing and pot-holing was conducted to confirm the

locations of underground utilities; soil gas samples were collected.

Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan

Completed Date: 12/12/2012

Comments: The Preliminary Construction Investigation Workplan scope includes

potholing two pits for the purposes of 1) inspecting a fuel pipeline and 2) for testing soil and groundwater conditions including hydraulic testing for groundwater recharge rates, soil density, and collection of soil samples for waste characterization. The dimension of the pits will be 2 feet wide and 6 feet long and extend to a depth of 8 feet below the ground surface. The information gathered will be used for shoring design during construction and waste characteristics of excavated soils for off-site disposal. Mitigation alternatives for

odors will also be evaluated.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Completion Report

Completed Date: 02/26/2013

Comments: The document summarized field activities conducted from December

17-21, 2012. Two test pits were dug and fuel pipelines were inspected and found to be in good condition. Soil conditions were observed to check for properties like density and groundwater saturation. Air monitoring related to contamination from the historical power plant operations was conducted in order to develop odor mitigation strategies for the future planned excavation in the street area (Jefferson Street). Groundwater and soils which were generated as part of the investigation was tested and found to be non-hazardous;

and were properly disposed at liscensed facilities.

Completed Document Type: Design/Implementation Workplan

Completed Date: 01/28/2013

Comments: The Remedial Design Implementation Plan (RDIP) involves excavation of

a portion of Jefferson Street where separate-phase petroleum product (SPPH) is present. The scope involves shoring, excavation of approximately 1,700 cubic yards of oil-stained soil, transport of approximately 100 truckloads, and disposal at a licensed landfill. Groundwater will be pumped from the excavation, treated and discharged or stored in tanks temporarily prior to trucking to a treatment facility. The RDIP is being implemented as part of an approved Remedial Action Plan (RAP) cleanup program which is addressing residual contamination at the Site from former power plant

OAKLAND POWER PLANT (Continued)

S103177008

EDR ID Number

of the pits will be 2 feet wide and 6 feet long and extend to a depth of 8 feet below the ground surface. The information gathered will be used for shoring design during construction and waste characteristics of excavated soils for off-site disposal. Mitigation alternatives for odors will also be evaluated.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Completion Report

Completed Date: 02/26/2013

Comments: The document summarized field activities conducted from December

17-21, 2012. Two test pits were dug and fuel pipelines were inspected and found to be in good condition. Soil conditions were observed to check for properties like density and groundwater saturation. Air monitoring related to contamination from the historical power plant operations was conducted in order to develop odor mitigation strategies for the future planned excavation in the street area (Jefferson Street). Groundwater and soils which were generated as part of the investigation was tested and found to be non-hazardous;

and were properly disposed at liscensed facilities.

Design Flow: 0
Baseline Flow: 0

Reclamation: Not reported POTW: Not reported

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA Enforcement Criminal Records Management System (ECRM), now called the Criminal Case Reporting System (CCRS), is the Criminal Investigation Division's (CID) "official record" of all criminal investigation activities. The system maintains and tracks case-specific program and investigative information on over 8,200 active and archived criminal cases. CCRS is an EPA-only system and data entry is performed directly by CID employees. The Public is allowed to obtain only select defendant data fields for closed, convicted cases via the Freedom of Information Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

Direction Distance Elevation

1000108096

EDR ID Number

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Registry ID: 110002334046

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

Registry ID: 110009329681

Environmental Interest/Information System

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Case Worker: Not reported Not reported Local Agency: RB Case Number: Not reported LOC Case Number: 80001412

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Trichloroethylene (TCE), Vinyl

chloride, Stoddard solvent / Mineral Spriits / Distillates

Site History: The Safety-Kleen Oakland facility includes a 8,900 square foot office

> and warehouse building within a commercial and industrial area of Oakland, CA. The site is currently used for storage of waste materials in the warehouse prior to transfer of the wastes to other facilities for processing. Safety-Kleen began operations at the site in 1975. Two underground storage tanks were previously located between the Safety-Kleen building and a neighboring business. The USTs were apparently removed in 2007 under the oversight of Oakland Fire Department. During a preliminary site assessment in May 1986, total petroleum hydrocarbons as mineral spirits (TPHms) were detected in soil samples collected from three soil borings advanced to a depth of 20 feet bgs. Two of the borings were converted to 2-inch diameter monitoring wells. Separate-phase product was observed floating on the water table in both monitoring wells (SK-1 and SK-3). In June 1988, a soil gas survey was conducted to define the extent of contamination. Thirteen soil vapor samples were analyzed for TPHms. A TPHms vapor plume was identified in the parking lot and loading dock area and was inferred to extend beneath both adjacent buildings and the vacant lot

to the north. Nine monitoring wells (MW-1 through MW-9) were installed on and around the site in July 1995. VOCs were detected in groundwater from each of the wells sampled. Because trichloroethene (TCE) was detected at elevated concentrations in the upgradient groundwater samples, it was assumed that a plume from an off-site source was migrating to the Safety Kleen site. Four additional monitoring wells were installed around the periphery of the VOC plume from August 18 through September 12, 1989. Monitoring well MW-13 was installed with a discrete screen interval in the lower portion of the uppermost aquifer to evaluate the vertical extent of contamination. Between May 31 and July 5, 1990, three single-walled USTs were removed and replaced with two 12,000-gallon USTs. Groundwater and product was encountered at a depth of approximately 8 feet bgs during the UST removal. Approximately 100 gallons of product and 34,000 gallons of water were removed and treated. TPHms was detected in eight soil samples collected during the UST removal. In conjunction with the UST installation, soil vapor extraction (SVE) piping and a product recovery well were installed in the excavation. A small waste oil tank located north of the Safety-Kleen facility was also removed on July 2, 1990. The SVE system began operation in June 1993. pilot test was conducted on January 18, 1990. From start-up through November 11, 1998, the SVE system removed approximately 5,400 pounds of TPHms. A product pumping system was installed in recovery well RW-1 to removed separate-phase product from the surface of the water table and began operation on January 19, 1993, Due to failure of the recovery pump, the recovery pump was replaced by a passive skimmer in November 1995. On August 5, 1998, the passive skimmer was removed and replaced by suspension of oxygen releasing compound in recovery well RW-1. The total volume of mineral spirits product removed was approximately 444 gallons. Safety-Kleen entered into a Corrective Action Consent Agreement with the Department of Toxic Substances Control (DTSC) on September 21, 2009. Under the terms of the consent agreement, Safety-Kleen submitted an RFI (Resource Conservation and Recovery Act Facility Investigation) Work Plan on April 9, 2010, to describe how contaminated media will be investigated. DTSC provided comments on June 14, 2010, and Safety-Kleen submitted a revised Work Plan on July 23, 2010. The revised Work Plan is under review. Safety-Kleen also submitted a Health Risk Assessment Work Plan on August 20, 2008, which was approved by DTSC on December 15, 2009. After the contamination is fully characterized, Safety-Kleen will conduct a Health Risk Assessment in accordance with the

Comments: The land use covenant restricts the usage of the property due to the

presence of contaminants including hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), metals, ammonia, and cyanide. Prohibited usages include usage for residential, hospital, schools for persons under 21 years of age, and

residential, hospital, schools for persons under 21 years of age, and day care for children. Usage of groundwater and drilling for water is also restricted or prohibited. Other provisions of the land use covenant include requirements related to soil management, and maintenance of a cap and groundwater monitoring wells.

Completed Area Name: Gas Load Center
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 09/09/2009

Comments: DTSC concluded that the Site does not present an unacceptable threat

to human health or safety or the environment if limited to industrial use. The Land Use Covenant prohibits use of the Site for residences, a hospital, a school for persons under age 21, or day care center. Additionally, the Land Use Covenant requires that any disturbance of the soil beneath the cap needs to be done in accordance with a Soil

and Groundwater Management Plan approved by DTSC.

Completed Area Name: Station C
Completed Sub Area Name: Not reported

Completed Document Type: Operation & Maintenance Order/Agreement

Completed Date: 11/26/2012

Comments: The Operations and Maintenance Agreement is an agreement between PG&E

and DTSC that PG&E will conduct activities on the Substation C parcel pursuant to implementation of the approved cleanup plan. The approved

Comments: Groundwater sampling.

Completed Area Name: Station C Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Completion Report

Completed Date: 01/28/2013

Comments: The report described subsurface construction activities including

> replacement of electrical equipment in vaults, trenches, and piles. Due to historical power plant operations at the Site, the excavation soils and groundwater required special handling. Soils were excavated and placed in roll-off bins. Excavated soils totalling approximately 3,500 tons were profiled and it was determined that they could be properly disposed as non-hazardous waste at local landfills.

> Groundwater generated from excavation dewatering operations was tested, run through an on-site treatment system prior to discharge into the storm or sanitary sewer sytems, or trucked off-site for disposal at a treatment facility. The total volume of groundwater handled was approximately 137,000 gallons. Groundwater discharges were conducted under appropriately permitted procedures including the National Pollution Discharge Elimination System (NPDES) permitting

process and at the East Bay Municipal Utilities District (EBMUD)

Oakland facility.

Comments: The preliminary design plan was adequate for the purposes stated in

the Removal Action Workplan. Information regarding proper disposal of soil from excavating approximately 7.5 inches of soil in the sidewalk

area will be provided as the plans firm up.

Completed Document Type: Removal Action Completion Report

Completed Date: 01/28/2013

Comments: The report described subsurface construction activities including

replacement of electrical equipment in vaults, trenches, and piles. Due to historical power plant operations at the Site, the excavation soils and groundwater required special handling. Soils were excavated and placed in roll-off bins. Excavated soils totalling approximately 3,500 tons were profiled and it was determined that they could be properly disposed as non-hazardous waste at local landfills. Groundwater generated from excavation dewatering operations was too tod, run through an on site treatment system prior to displace.

tested, run through an on-site treatment system prior to discharge into the storm or sanitary sewer sytems, or trucked off-site for disposal at a treatment facility. The total volume of groundwater handled was approximately 137,000 gallons. Groundwater discharges were conducted under appropriately permitted procedures including the National Pollution Discharge Elimination System (NPDES) permitting process and at the East Bay Municipal Utilities District (EBMUD)

Oakland facility.

Potential Media Affect: Other Groundwater (uses other than drinking water)

STATE

Potential Contaminants of Concern: Gasoline

Site History:

This fuel leak case addresses five underground storage tanks (USTs) that were located beneath the sidewalk in front of a commercial building at 632-638 2nd Street, Oakland, CA. Surrounding land use is commercial and industrial. The commercial building at 632-638 2nd Street was leased by PG&E in the 1950s. After PG&E vacated the property, the building appears to have been used by a door manufacturer in the 1960s. The building was later used as a hardware storage warehouse. Small businesses currently occupy the building spaces. On September 13, 1996, three soil borings were advanced in the area of the suspected USTs to determine if subsurface soils were impacted by petroleum hydrocarbons. During the drilling of SB-1, stained and odorous soils were encountered to a depth of 4.5 feet bgs. At 5 feet bgs, the sampler pierced an unknown object which was suspected to be one of the USTs and dropped into a void under its own weight. Upon retrieval, the sampler was coated with a liquid that had a petroleum odor. Soil boring SB-3, which was advanced to a depth of two feet at a location several feet from SB-1, encountered gray-stained soil with a petroleum odor. A fingerprint analysis of the soil sample from SB-3 indicated that the petroleum hydrocarbons encountered in SB-3 were extremely weathered gasoline or possibly mineral spirits. On February 2, 2007, twelve soil borings were advanced around the USTs to collect soil and groundwater samples. Several of the borings were advanced at an angle to obtain soil samples beneath the USTs. Analytical results from soil and groundwater samples collected in the borings indicated that leaks occurred in the tank systems for tanks I, II, and III. The leaks were suspected to be upgradient of the tanks, most likely in the piping

EDR ID Number

and dispensers. After triple rinsing, four of the USTs (I, II, III, and IV) were closed in place by filling with concrete on May 2, 2007. Following the cleaning and pumping of UST V on May 1, a creosote/water mixture was observed to have partially re-filled the UTS. Closure of UST V was delayed while the creosote level was monitored over a two week period. The volume of creosote did not increase over the two week period from May 2 to approximately May 16, 2007. The creosote that entered the UST following the initial cleaning and rinsing was suspected to be from an abandoned delivery line. UST V was closed in place by filling with concrete on May 25, 2007. In October 2008, 15 soil borings were advanced in the sidewalk near the USTs and south of the USTs in 2nd Street. After field screening, a total of 29 soil samples were selected for laboratory analysis. TPH as diesel was detected in 23 of the 29 soil samples at concentrations up to 22 ppm. TPH as gasoline, BTEX, and MTBE were not detected in any of the soil samples. TPH as diesel was detected in all 15 grab groundwater samples collected at concentrations up to 21,000 ppb. The highest concentration of TPH as diesel was detected south of the USTs beneath 2nd Street. Benzene was detected in 2 of the 15 grab groundwater samples at concentrations up to 9.2 ppb. In order to assess the potential vapor intrusion to indoor air, soil vapor samples were collected at four locations along the outside wall of the building and one location adjacent to UST II on November 6. 2009. Due to the detection of the leak compound, 2-propanol at concentrations ranging from 43 to 1,800,000 ppbv, the November 6, 2009 results were not considered reliable and a second sampling event took place on November 19, 2009. No chemicals of concern were detected in the five soil vapor samples collected on November 19, 2009. Based on the November 19, 2009 sampling results, vapor intrusion was not considered a potential threat for the site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description: 10 bags (unknown sizes) of this material was inside a cargo

> container. As the cargo holder was being transported from the vessel to the dock it was noticed to be leaking the powder. Response crews are enroute at this time to ascertain what they can about this spill. RP is enroute there as well and anticipates being on scene in approximately 20 minutes. He will call us back right away with an update as to whether or not the water was impacted by this substance.

Case Worker: JTW

Local Agency: ALAMEDA COUNTY LOP

RB Case Number: NA

LOC Case Number: RO0003001

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor

Potential Contaminants of Concern: Gasoline

Site History: An underground storage tank was discovered beneath the sidewalk at

645 Fourth Street in Oakland in 2006. Due to the proximity to the building, the tank was closed in place by filling with a concrete slurry on September 5, 2006. Prior to filling the tank with concrete slurry, soil samples were collected beneath the tank. Fuel hydrocarbons were detected in the soil samples. Soil borings have been advanced in the area of the tanks to investigate the extent of contamination. Interim remediation using high-vaccuum dual-phase extraction was conducted in 2010 and 2012. Sub-slab vapor sampling

has been completed and it appears that sub-slab vapor concentrations are below levles of concern. Confirmation soil sampling and groundwater monitoring is planned prior to consideration of case

closure.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Completed Document Type: Preliminary Endangerment Assessment Report

Completed Date: 06/28/2002

Comments:

PEA - PA/SI - Preliminary Assessment completed for U.S. EPA which found that no further action was needed at the site. Starting in 1998, the United States Environmental Protection Agency (US EPA) d

1998, the United States Environmental Protection Agency (US EPA) did an emergency removal of the hazardous substances. In October 1999, soil was removed in selected areas from 6 inches to 2 feet. There are no current operations at the site. Francis Plating used various plating solutions for aluminum anodizing, nickel and cadmium plating, and chromic acid passivation for stainless steel parts. Acids, bases, and dyes were used in the operation. Copper, lead, cadmium, nickel, cyanides, silver, zinc, sulfates, phosphates, chlorides, and soap solutions located in tanks and vats were some of the many chemicals used in the plating process. Some of these were located in a stainless steel containment tank 32 feet by 15 feet by 5 feet inside the building. There was a concrete pit area 15 feet by 68 feet by 3.5 feet outside in the "front yard" called the "Frog Pond". In the Front Yard along the 7th Street (east side) and along the fence next to the Shell Gas Station (north side) were limited areas of exposed soil. Most of the site was either paved, or had concrete or buildings on it. Francis Plating had a discharge permit and sent treated wastewater to the municipal sanitary system. East Bay Municipal Utility District (EBMUD) sealed the sanitary connection with concrete in the fourth quarter of 1996. Wastewater was then treated on-site. Wastewater, sent though the boiler to concentrate and precipitate the metals, was then fed into a filter press. The filter cake was spread out on the cement in the northern portion of the site and dried. There are no records of hazardous materials or waste removed from the site after 1993. After 1994, the property was used to store hazardous material picked up by Earthco Environmental for disposal. The trailers located in the "Rear Yard" area were used. Starting in 1994, hazardous substances generated by operations on site were recycled back into the manufacturing process. US EPA led the cleanup after the fire in 1992. Some runoff from the fire reached the Oakland Estuary from storm drains in the area of the Howard Terminal. Much of the runoff was captured and contained and later disposed off site. The Regional Water Quality Control Board (RWQCB) sampled the water and sediments in the estuary for US EPA. In July 1999, eight surface composite samples were taken in the front yard and three in the rear yard area along Brush Street. In addition, there were 12 subsurface borings taken around the site and five waste sediment locations. The results ranged as follows: cadmium up to 2,100 milligarms per kilogram (mg/kg), lead up to 26,000 mg/kg, arsenic up to 26 mg/kg, and chromium up to 84,000 mg/kg. Based on the initial results, exposed soil to the depth of one-foot was removed along Brush Street and in the Front yard. After confirmation sampling, selected areas were excavated an additional six inches. After additional confirmation sampling, the site soil contained cadmium 0.7-7.5 mg/kg, lead 22-450 mg/kg, arsenic 1.2-7.4, and total chromium 13-300 mg/kg. Only one of the confirmation samples was above the residential cleanup levels for chromium and lead.

Potential Media Affected: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern:

Site History:

* Solvents, Lead, Nickel A plating facility was operated at the site between 1957 and 1998, at

which time the site was abandoned. The abandoned plating facility contained hazardous materials and wastes, which were removed during

an emergency response action directed by U.S. Environmental Protection Agency (EPA), Office of Emergency Response in 1998/1999. Subsequent soil and groundwater investigations have found that the soil and groundwater at the site have been impacted by metals, in

particular hexavalent chromium (Cr-VI), and volatile organic compounds (VOCs), in particular, trichloroethene (TCE). The primary source of metals and VOCs appears to have been a below-grade concrete structure referred to as the Frog Pond. Between June and December 2007, the Frog Pond was removed and backfilled with gravel. The Frog

Pond was subsequently covered with a concrete cap. Additional investigation is currently underway to define the extent of

contamination. Alameda County Environmental Health has requested that

site cleanup be initiatied through interim remediation or pilot

testing.

Remedial Investigation / Feasibility Study Completed Document Type:

Completed Date: 07/03/1995

Comments: Completed RIFS. Caltrans conducted a Phase I site investigation to

determine if any site activities had caused contamination on Caltrans property. An unregistered 1000 gallon underground storage tank was located at the rear of the property. The soil samples showed total

petroleum hydrocarbons up to 30 ppm.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

letter dated 1/22/02.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: 5 Year Review Reports

Completed Date: 07/29/2011

Comments: DTSC concurs with the conclusion in the Five-Year Review Report that

no areas of noncompliance with the Land Use Covenant were found and the remedy remains protective of human health and the environment.

DTSC approved the Five-Year Revew Report.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Land Use Restriction - Site Inspection/Visit

Completed Date: 06/22/2009

Comments: Impacted soil remains under the vapor barrier and concrete slab,

which was initially inspected for significant cracks after the concrete was poured; and, subsequently remains protective.

Handler Activities Summary:

U.S. importer of hazardous waste: No Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: No User oil refiner: Nο Used oil fuel marketer to burner: Nο Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039

Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Not all historic documents for the fuel leak case may be available on Site History:

GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: http://ehgis.acgov.org/dehpublic/dehpublic.jsp. A 10,000 fuel UST was removed on June 15, 1988. Agency correspondences also state that TPH-g and benzene concentrations in soil were detected. A groundwater

monitoring well installed in 1988, located approximately 4 feet

down-gradient of the former UST pit, also detected TPH-g and benzene

in soil at concentrations. Soil samples were also collected during the pre-construction for the new Cypress replacement project. Groundwater sample analytical results collected in 1988 detected TPH-g and in June 1992. Groundwater sample analytical results collected in August 16, 2006 detected lower concentrations of TPH-g

and benzene.

Local Agency: ALAMEDA COUNTY LOP

RB Case Number: 01-2322 LOC Case Number: RO0000234

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History: Groundwater monitoring wells were installed at the site in 1996 in

response to a fuel release. In March 1999, two 10,000-gallon diesel USTs, one 10,000-gallon gasoline UST, and one 8,000-gallon gasoline UST were removed from the site. Interim remedial action was performed during the UST removal to address contaminated soil and ground water. Approximately 2,100 tons of contaminated soil were removed from the excavation. Approximately 33,000 gallons of contaminated water was pumped from the tank pit for off-site disposal. Approximately 1,700 tons of backfill was placed in the excavation. Site investigations that included soil and groundwater sampling were conducted at various times between 1999 and 2006. Ozone sparging has been ongoing since September 24, 2005. A Feasibility Study will be prepared to evaluate

additional cleanup options.

on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RB Case Number: 01-0741
LOC Case Number: RO0000235

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History: Three gasoline and one waste oil underground storage tanks (USTs)

were removed from the site. Holes were noted in two USTs and free phase product was noted in the tank pit. Concentrations of total petroleum hydrocarbons as gasoline (TPHg) up to 20,000 milligrams per kilogram (mg/kg), benzene to 33 mg/kg, and lead to 1,400 mg/kg were

reported in soil. Free product was observed in borings and groundwater samples that were analyzed detected up to 37,000 micrograms per liter TPHg and 7,100 benzene. The lateral and vertical extent of contamination is undefined and impacts to groundwater have not been evaluated. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site may be located on the Alameda County Environmental Health website at: http://ehgis.acgov.org/dehpublic/dehpublic.jsp.

contaminants: total recoverable petroleum hydrocarbons (TRPH) as high as 6,700 ppm; TPH as diesel as high as 3,800 ppm; acetone-150 ppb; di-n-butylphthalate 0.9 ppm; bis (2-ethylhexyl)phthalate 0.9 ppm; pyrene 0.3 ppm; benzo-a-pyrene 0.3 ppm; lead (840 ppm). The following contaminants were detected in groundwater: arsenic (0.22 ppm); barium (1.1 ppm); and cadmium (0.02 ppm).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 12/28/1992

Comments: Completed Site Screening. It is a RCRA facility with five

underground storage tanks. Of these, two are 10,000-gallon capacity diesel tanks, one is a waste oil tank, one is a fresh oil tank, and one is an abandoned solvent tank. The solvent tank is reportedly filled with water. All the tanks are reported to have tested

leak-free in 1988, and recently.

Remedial Investigation / Feasibility Study Completed Document Type:

Completed Date: 07/03/1995

Comments: Completed RIFS. Site investigation was conducted by Caltrans consultants in June 1992. Soil and groundwater samples were

collected as part of the investigation. Groundwater was encountered at a depth of 6-7 feet. Soil samples revealed the following contaminants: total recoverable petroleum hydrocarbons (TRPH) as high as 6,700 ppm; TPH as diesel as high as 3,800 ppm; acetone-150 ppb; di-n-butylphthalate 0.9 ppm; bis (2-ethylhexyl)phthalate 0.9 ppm; pyrene 0.3 ppm; benzo-a-pyrene 0.3 ppm; lead (840 ppm). The

following contaminants were detected in groundwater: arsenic (0.22

ppm); barium (1.1 ppm); and cadmium (0.02 ppm).

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported Site Screening Completed Document Type: Completed Date: 12/28/1992

Comments: Completed Site Screening. It is a RCRA facility with five

underground storage tanks. Of these, two are 10,000-gallon capacity diesel tanks, one is a waste oil tank, one is a fresh oil tank, and one is an abandoned solvent tank. The solvent tank is reportedly filled with water. All the tanks are reported to have tested

leak-free in 1988, and recently.

Site History: The case is overseen by DTSC. Envirostor ID No. 01420128. The site is

part of the Cypress Freeway Construction Project. Former site uses include a warehouse and distribution facility since 1967. Site activities consisted of unloading cargo from freight trains and transferring to trucks. Prior to this use, the site was owned by the Commissary Department of the Southern Pacific Railroad. It is not known what site activities took place when it was owned by the railroad. Caltrans purchased the site in 1994 in connection with

reconstruction of the Cypress Freeway.

Completed Document Type: Removal Action Workplan

Completed Date: 12/23/1996

Comments: RAWs approved. So

RAWs approved. Soil and groundwater investigations were conducted by both CalTrans and Southern Pacific Transportation Company (SPTCo) in the eastern portion of the site. Soil was found to be contaminated with petroleum compounds, pesticides, arsenic, lead, benzo(a)pyrene and volatile organic compounds. Groundwater was found to contain low-boiling petroleum hydrocarbons and volatile organic compounds. Both CalTrans and SPTCo were required to prepare a Removal Action Workplan (RAW) for the Eastern Portion of the site. The CalTrans RAW addressed the site during construction of the freeway whereas the SPTCo RAW describes post-construction actions. Both RAWs were approved in December 1996. The CalTrans RAW required a design change to the construction of Bent CR23. Three proposed footings were redesigned and located at ground level, and piles were redesigned so that no soil coring was required. In addition, a fourth footing was added to ensure stability in the event of an earthquake. Disposal of groundwater was not required as no excavation occurred. The remaining footings were constructed according to the existing design. Sealed shoring was installed at these footing locations to limit the amount of groundwater infiltration during construction excavations. Excavated groundwater was treated onsite and then either reused onsite or properly disposed off-site. The SPTCo RAW concluded that the site (soil and groundwater) does not pose a risk to human health and the environment under the exposure scenarios identified in the risk assessment (child trespasser and future construction worker). The alternative selected in the RAW requires an asphalt cap (or equivalent) with institutional controls and groundwater monitoring. This alternative was selected as SPTCo desired a useable surface at the site after freeway construction is completed. Two monitoring wells were installed downgradient of where cis-1,2-DCE was detected in groundwater. The purpose of the monitoring wells are to verify that cis-1,2-DCE is not migrating off the site. The Department will re-evaluate the need for additional remediation following the implementation of the U.S. EPA's investigation associated with an upgradient source, and in the event that groundwater concentrations rise significantly at the site. A five-year review of the removal

Background Info: The Lewis Street Site is a former residential property which has

been used to store automobiles, drums, pressurized gas containers, and other miscellaneous equipment. The property is fenced. No volatile or semivolatile organic compounds were

detected at significant levels.

Comments Date: 06091997

Comments: SITE SCREENING PREPARED UNDER THE EPA GRANT INDICATES THAT

Comments Date: 06091997

Comments: FURTHER ASSESSMENT OF THIS SITE IS NEEDED.

Comments Date: 06182004

Comments: The Removal Action consisted of removal of approximately 105

Comments Date: 06182004

Comments: cubic yards of above-ground debris including tires, compressed

Comments Date: 06182004

Comments: gas cylinders and heavy equipment and excavation and offsite

Comments Date: 06182004

Comments: disposal of 700 cubic yards of soil and debris contaminated with

Comments Date: 06182004

Comments: lead to a Class I landfill. The property was then backfilled

Comments Date: 06182004

Comments: with clean material. All contamination above residential

Comments Date: 06182004

Comments: standards was removed and the site was certified in June 2004.

Comments Date: 06282002

Comments: DTSC conducted a Preliminary Assessment which found further

Comments Date: 06282002

Comments: action was required. Surface samples collected at the site found

Comments Date: 06282002

Comments: lead as high as 1,080 parts per million (ppm).

Comments Date: 10242003

Comments: DTSC approved a Removal Action Workplan (RAW) requiring the

Comments Date: 10242003

Comments: removal of all soils above residential levels. A notice of

Comments Date: 10242003

Comments: exemption was approved for removal activities.

Comments Date: 10282002

Comments: An Imminent and Substantial Endangerment Order was issued to the

Comments Date: 10282002 Comments: property owner. Comments Date: 11092001

Comments: DTSC conducted sampling at the site. Lead concentrations in

Comments Date: 11092001

Comments: surface soil were as high as 1,080 milligrams per kilogram (ppm).

Comments Date: 11092001

Comments: No volatile or semi-volatile compounds were found.

Comments Date: 12102002

Comments: The owner was found in non-compliance with the Order in December

Comments Date: 12102002 Comments: 2002. Comments Date: 12142003

Comments: The Superior Court of California, County of Alameda issued an

PROJECT WIDE Completed Area Name: Completed Sub Area Name: Not reported Completed Document Type: Land Use Restriction

Completed Date:

The land use covenant for the site was signed by DTSC on October 28, Comments:

2010 and recorded with Alameda County on October 29th. The covenant

requires notification to DTSC and a soil management plan if soil beneath the site is disturbed or brought to the surface. The covenant also prohibits the use of the site for single-family, unattached

residences.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported Completed Document Type: Site Screening Completed Date: 06/19/2006

Comments: Soil under building foundation determined to be impacted by lead,

TPH, and PCBs. Deed restriction recommended.

PROJECT WIDE Completed Area Name: Completed Sub Area Name: Not reported

Completed Document Type: Soils Management Plan

Completed Date: 11/22/2004

Comments: This soil management plan was submitted to the Oakland Fire

Department, who concurred with its implementation.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction

Completed Date: 10/29/2010

Comments: The land use covenant for the site was signed by DTSC on October 28,

2010 and recorded with Alameda County on October 29th. The covenant

requires notification to DTSC and a soil management plan if soil beneath the site is disturbed or brought to the surface. The covenant also prohibits the use of the site for single-family, unattached

residences.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/19/2006

Comments: Soil under building foundation determined to be impacted by lead,

TPH, and PCBs. Deed restriction recommended.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Soils Management Plan

Completed Date: 11/22/2004

Comments: This soil management plan was submitted to the Oakland Fire

Department, who concurred with its implementation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 12/30/2004

Comments: Data shows elevated levels of lead, chromium. copper and PCBs.

Completed Document Type: Certification
Completed Date: 11/09/2010

Comments: The first and second floors of the building at the site are used for

parking and commerical purposes. The third through eighth floors consist of for-lease condominiums. The land use covenant for the site was recorded with Alameda County on October 29, 2010. The site will be inspected annually to insure that the cap over the contaminated

soil which remains at the site is maintained.

on: The 4.259-acre site is located in Alameda County, CA within the city of Oakland. The Hotel Oakland (former Army Hospital building) has been renovated several times since Department of Defense (DoD) activity was terminated. Current owners of the associated parcels include Hotel Oakland Associates, ICH Associates, and four private owners. In 1943, the U.S. acquired 12 leases for a total of 4.259 acres. The site was used as a station hospital by the U.S. Army Medical Corps. In 1946, 1.377 acres were transferred to the Veterans Administration

(VA). In 1947, the remaining acres were transferred to the VA. No potential hazards have been identified at this site.

Alternate Address: CYPRESS CORRIDOR Alternate City, St, Zip: OAKLAND, CA 94607

Background Info: Site has been used as a railyard for approximately 90 years.

Petroleum hydrocarbons and metals have been detected along the rail lines. An Imminent or Substantial Endangerment order was issued in June 1994 to Southern Pacific. In October 1997, the Remedial Investigation Report was approved. Investigations mainly detected high boiling petroleum hydrocarbons (JB oil, motor oil or oil and grease) in the soil (fill material). Other chemicals such as lead, volatile organic compounds, polycyclic aromatic hydrocarbons, and pesticides were detected in isolated area of the Site at low concentrations. Chemicals detected in

the groundwater included cis-1,2-dichloroethene and

trichloroethene in isolated area.

SOUTHERN PACIFIC - DESERT RAILYARD (Continued)

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Land Use Restriction - Site Inspection/Visit

Completed Date: 04/26/2010

Comments: This report is intended to serve as the 2009 Annual Inspection Report

for the I-880 Realignment Corridor?s Land Use Covenants (LUC) for the Desert Rail Yard oNorthern Elevated Sectiono, West Oakland Rail Yard and Desert Rail Yard oAt Grade Sectiono, and West Oakland Rail Yard oSouthern Elevated Sectiono as well as the Annual Summary Report for the Operation and Maintenance (O&M) of the Protective Barrier System for Former Bobo?s Junkyard and West Oakland Rail Yard oSouthern

Elevated Sectiono.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction

Completed Date: 03/13/2009
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 05/28/2009

Comments: DTSC has determined that all appropriate removal actions have been

completed and that all acceptable engineering practices were implemented; however, the Site requires ongoing operation and

maintenance and monitoring.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Workplan

Completed Date: 03/20/1998

Comments: Approved RAW which required that a Deed Restriction be recorded for

the entire site and asphalt capping of the Southern Elevated portion of the site. The deed restrictions for the three sections of the Site would prohibit residential, day care schools, and hospitals on

the property.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Remedial Investigation / Feasibility Study

Completed Date: 10/10/199

Comments: Approved RIFS. Investigations mainly detected high boiling petroleum

hydrocarbons (JB oil, motor oil or oil and grease) in the soil (fill material). Other chemicals such as lead, volatile organic compounds, polycyclic aromatic hydrocarbons, and pesticides were detected in isolated of the site at low concentrations. Chemicals detected in the groundwater included cis-1,2-dichloroethene and trichloroethene in isolated area. The Site was divided into three sections (Northern Elevated, at-grade and Southern Elevated) during the investigation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 02/03/2006

Comments: DTSC receive the Fourth Quarter 2005 Summary Report as required by

the I&SE order No. 93-94-018.

Comments: During the 2012 inspection, the repaired area appeared in good

condition and placing K-rails in the area have been effective for discouraging disruption of the barrier. Sparse rip-rap and minor erosion was noted in a small area near the edge of the rip-rap and asphalt barrier. During the visual inspection of the Desert Rail Yard oNorthern Elevated Sectiono, West Oakland Rail Yard and Desert Rail Yard oAt Grade Section, and West Oakland Rail Yard oSouthern Elevated

Sectiono appear to be in compliance with the prohibited uses or

activities as outlined in Article IV of the three LUCs.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 11/14/2012 Date Data Arrived at EDR: 12/11/2012 Date Made Active in Reports: 02/15/2013

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Elevation: 12 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 37122-G3 OAKLAND WEST, CA

Most Recent Revision: 1980

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

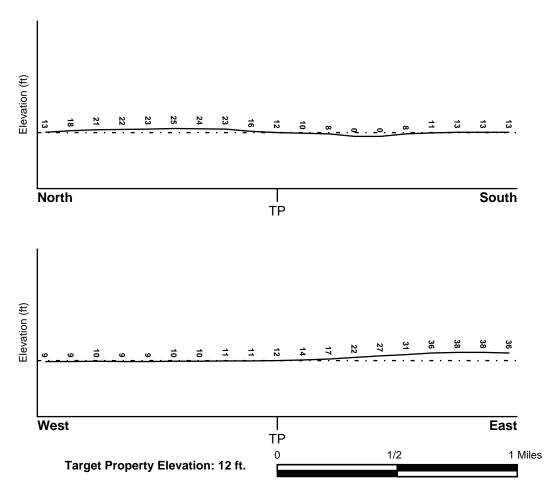

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1/2 - 1 Mile SSE

Site Name: Naval Supply Center, Alameda Annex & Facility

Site EPA ID Number: CA1170090012
Groundwater Flow Direction: Southeast
Measured Depth to Water: 5 feet.

Hydraulic Connection: Information is not available about the hydraulic connection between

aquifer(s) underlying the site.

Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information based on site-specific subsurface investigations is

documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class:

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class:

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map. USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

ENVIRONMENTAL QUESTIONNAIRE for PHASE ONES

AS REQUIRED by ASTM Standard E1527-05

То	:	From: <u>Jeff Jones</u>
At:		At:
Fa	x:	Pages:
Ph	one:	Date:
Sit	e Na	me:
Ad	dres	s:
of wo	your uld l	e Owner and Key Site Manager should provide the following information. Please fill in this form to the best ability, explaining any Yes answers on a separate sheet of paper. Without these answers, our report have to note that the Phase One is incomplete, and your Landowner Liability Protections could be at risk. and these answers before we conduct the site visit.
1.	or i	vironmental Cleanup Liens. ASTM requires the User to check for environmental liens that may be filed recorded against the subject property under federal, tribal, state or local law. Such liens might be listed in "exceptions to coverage" in the property's title insurance commitment or policy.
		Have you checked for these environmental cleanup liens? $\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$
2.	use	tivity and Use Limitations (AULs). These include engineering controls (e.g., slurry walls, caps) and land e restrictions or institutional controls (e.g., deed restrictions, covenants) that may be in place at the site or d under federal, tribal, state or local law. The title commitment or policy might also list AULs.
		Are you aware of any possible AULs involving the subject site? ☐ Yes ☐ No
3.	nea	ecialized Knowledge. This involves personal knowledge or experience related to the subject property or arby properties. For example, if you are involved in the same line of business as the current or former supants of the property or an adjoining property, you would probably know of any chemicals, oil, greasers, gasoline, or other hazardous substances commonly used in that type of business. Do you have any specialized knowledge that might indicate the past or
		present use or release of such substances on the subject or nearby properties?
4.	Ob	vious Indicators. This involves past or present spills, stains, releases, cleanups, etc. on or near the site.
_		Do you know of any obvious indicators of possible contamination on or near the site?
5.	Co a.	mmon Knowledge. Please use a separate sheet if necessary. Describe the past uses of the property: The most recent use was as the Port of Oakland Facilities
	a.	Operations and Maintenance base. Prior to that, there were industrial uses of which I have no specific knowledge.
	b.	Describe any specific chemicals that may have been present at the property: Petroleum products, paints of all types, cleaners; products typical of vehicle fueling and maintenance and property management
	C.	Describe any historical releases, leaking tanks, hazardous material responses, flooding, or fires at the subject property: <u>USTs</u> serving a fueling station were removed in about 2002. It is possible that these tanks leaked. There should be a report.
	d.	Describe any other information that may help us identify possible contamination: I know of no other releases during my time at the Port (1996) or previous to that.

6.	Previous Owners/Occupants of the Property. Please list previous owners, operators, a their contact information, if available. Don't know	nd/or occupa	ants and
7.	Historical USTs at the Property.		
	Have there been any USTs at the property in the past?		☐ No
8.	Historical Water Use Wells at the Property.		
	Have there been groundwater monitoring wells or water use wells at the Property?	☐ Yes	☐ No
9.	Artificial fill or dumping at the Property.		
	Has artificial fill or dumping taken place at the property?	☐ Yes	☐ No
10	. Historical Utilities at the Property.		
	Have utilities changed at the property (i.e. septic system or private well)?	☐ Yes	☐ No
	# of separate sheets		
Yo	tur Signature Date Explain Yes answers	on a separat	e sheet.

Explain Yes answers on a separate sheet.

Appendix E Professional Profiles

James B. Warner, P.G.

Partner

Mr. James Warner has 25 years of professional experience related to hazardous waste site investigation and remediation, legal services, environmental due diligence, water supply assessment and development, compliance, and strategic consulting. This experience includes projects in North America, South America, Asia, and Europe.

Mr. Warner has managed diverse hazardous waste site investigation and remediation projects under CERCLA, RCRA, State, and local regulatory programs. Sites include transportation facilities, industrial operations, refineries, chemical plants, mining operations, and military facilities. He specializes in state-of-the-art environmental investigation techniques, fate and transport evaluations, modeling, and data visualization focused on efficient and meaningful characterization to support effective risk-based closure, remedial strategy development, and regulatory negotiations. He has developed, implemented, operated, and optimized a wide range of remediation programs, including in situ and ex situ methods for different contaminants in diverse settings ranging from shallow fill material to deep fractured bedrock.

Mr. Warner has provided legal support for litigation and mediation involving industrial facilities and mining operations. He has developed legal strategies, written expert reports and submittals, given depositions, participated in cost recovery actions, and been involved with multiparty mediated settlements. He has a proven record of effective advocacy on behalf of parties he has represented. He has worked on several high profile sites involving PRP groups.

Mr. Warner has directed environmental due diligence evaluations for property and company acquisitions, water supply development projects, and compliance assurance programs for a wide range of clients, leading to successful business decisions, liability management, and resource management.

Key Projects

Represented major airline in lawsuits related to subsurface contamination at airports (SEA, PDX, SFO, OAK, LAX). Other parties included Ports, airlines, and oil companies. Performed cost allocation evaluations and negotiations to settle disputes and assist client in successful resolution of liabilities with numerous parties.

Provided litigation support to mining company for suit related to groundwater and surface water impacts by arsenic and other inorganic contaminants at mine in Sierra Nevada Mother Lode District. Evaluated site conditions, mine history, reclamation requirements, and lawsuit to assist client in equitable settlement. Participated in mediated settlement.

Expert for aggregate/gold mining operation for lawsuit (California Water Code, Clean Water Act, and Proposition 65) by citizens group concerned about metals, TDS, and sediment impacts to Yuba River in Northern California. Developed effective defense strategy. Directed technical evaluations and fieldwork to address potential contaminant sources, groundwater-surface water impacts, mining operational history, and water use in area. Produced expert documents and rebuttals. Successfully addressed concerns and the lawsuit was dropped.

Expert for lawsuit between two major Silicon Valley chip manufacturers concerning responsibility for extensively commingled chlorinated VOC plumes. Directed fieldwork and evaluations to develop technically defensible past and future allocations based on observational data, groundwater flow and solute transport modeling, remediation costing, and operational histories. Generated expert reports and rebuttals. Reached favorable settlement on behalf of client.

Assisted airline in lawsuit concerning jet fuel plume at San Francisco International Airport involving other airlines and an oil company. Developed strategy, directed investigations, performed evaluations (history, sources, fate and transport, fuel forensics, remedial costing), and generated expert documents to define allocation position. Reached favorable mediated settlement that led to remediation as chosen consultant for cooperative PRP group. Remediation involves multiphase hydrocarbon recovery to restore groundwater, prevent worker exposure, and protect San Francisco Bay.

Provided litigation support to Southern California aerospace manufacturer for lawsuit involving insurer. Developed strategy and generated expert documents related to chlorinated VOC plumes. Conducted extensive investigations and modeling as part of team (including fate and transport researcher from UC Berkeley and other consultants) to support cost recovery from insurer. Case was successfully resolved with client receiving significant monetary settlement.

Represented Santa Barbara County as expert for citizen's lawsuit by homeowners near County landfill with chlorinated VOC plume in overburden and fractured bedrock. Homeowner's suit was based on water supply impacts, gas migration, and home value complaints. Project involved groundwater, outdoor air, and indoor air investigation, as well as risk assessment. Developed strategy and generated expert reports and rebuttals. Case was settled by County purchasing selected properties.

Provided litigation support for chemical manufacturer in California's Central Valley involving commingled chlorinated VOC, pesticide, and metals plumes with adjacent manufacturer. Supported strategy development based on previous RI/FS experience at site. Served as fact witness for depositions.

Developed financial reserve estimates for multiple remediation sites across the US for major airline in compliance with Sarbanes-Oxley protocols.

Managed environmental due diligence and remedial evaluations for Chevron in Southeast Asia and Latin America. Projects included Phase I ESAs for several shore-based logistics facilities that support off-shore oil platforms, as well as onshore exploration and production assets.

Managed third party review of a large scale remediation project for Chevron in the Middle East. Participated in expert team to evaluate investigation, risk assessment, and remedial planning and recommend future work.

Represented a utility on a South Pacific island responding to USEPA RFI and response actions for discharges of oil to the ocean. Conducted investigation to identify PRPs and respond to RFI. Managed SPCC and NPDES compliance projects for power generation facilities.

Directed ongoing investigation, risk assessment, and remediation project for a site in Hollister, California involving significant on-site and off-site TCE and perchlorate plumes. Project includes extensive investigation, remedial planning, source area remediation, groundwater containment system implementation, and replacement of water supplies for third party wells that have been impacted.

Investigated chlorinated VOCs in groundwater at Palo Alto, California Superfund Site. Investigated groundwater flow, conducted aquifer testing, and evaluated extraction well performance to assess contaminant migration and remediation effectiveness. Identified other responsible party and negotiated cost-sharing agreement. Negotiated remedial strategy with RWQCB and DTSC and implemented excavation/pump and treat remedy.

Performed investigations of 70 underground storage tank and fuel pipeline sites at U.S. Naval Air Stations in Northern California under RWQCB oversight, including Mare Island, Alameda, Crows Landing, and Skaggs Island. Investigated PCBs in soil and their potential to migrate to SF Bay.

Managed investigation, risk assessment, and remediation project for chlorinated VOC plume in fractured bedrock at maintenance center at San Francisco International Airport on behalf of airline under RWQCB oversight. Project involved extensive drilling, borehole geophysics, seismic reflection survey, aquifer testing, well survey, monitoring, modeling, risk assessment, in situ remediation microcosm testing, and DNAPL recovery. Primary concerns are potential impacts to water supply wells, vapor intrusion, and ecological receptors in San Francisco Bay. Negotiated MNA closure with RWQCB.

Directed investigation, risk assessment, and feasibility study for a chlorinated VOC plume under RWQCB oversight in Pleasant Hill, California for PRP group. Concerns include drinking water, indoor air, and ecological receptors. Project involves exterior investigation and modeling, complex potentially responsible party (PRP) negotiations, and high-profile public involvement. Negotiated final remedy involving SVE, chemical oxidation, and in situ permeable reactive barrier with zero valent iron.

Managed extensive investigation, risk assessment, and remediation of free phase and dissolved phase jet fuel in several active boarding areas at San Francisco International Airport for PRP group (oil company and airlines) under RWQCB oversight. Investigations involved drilling, geophysical surveys, extensive groundwater flow evaluations and aquifer testing, monitored natural attenuation assessments, and LNAPL and dissolved jet fuel monitoring. Remediation involved long-term pilot testing of free product recovery by skimming and high-vacuum extraction (HVE). Final remediation by mobile and fixed system HVE is underway.

Managed investigation and remediation of chlorinated solvents and Stoddard solvent (LNAPL and dissolved) in shallow aquifer at maintenance facility at San Francisco International Airport for airline under RWQCB oversight. Remediation includes LNAPL recovery by HVE and in situ dissolved cleanup by enhanced aerobic degradation and chemical oxidation.

Managed human health and ecological risk assessment for fill material containing lead along a Steelhead habitat stream and adjacent residential area for Sonoma County Water Agency. Developed closure plan and negotiated innovative capping remedy with the RWQCB, which incorporates bike path design as protective barrier to exposure and mobilization.

Performed large scale hydrogeologic/surface water evaluation for 90 MGD radial collector wellfield adjacent to river with endangered species on behalf of Sonoma County Water Agency. Conducted long term aquifer tests to evaluate production well capacities and optimize water use in light of site conditions, projected future demand, and other system constraints.

Managed Phase I/II ESAs related to water supply and storm water system upgrades in Sonoma and Marin Counties, on behalf of Sonoma County Water Agency.

Served as Principal-in-Charge for 5-year, on-call contract for BART light-commuter rail system, consisting of six task orders related to construction of transportation facilities in areas containing impacted soil and groundwater. Oversaw initial site assessment related to property acquisition, Phase II site investigations to determine material management and worker health and safety options, and procurement support.

Evaluated basin-wide effects of long term pumping from multiple municipal supply wells on the San Francisco Peninsula to assess sustainable water supply, potential for sea water intrusion, and potential for regional groundwater plumes to impact supply wells.

Evaluated sustainability of groundwater supplies in a large basin in Central Asia in support of the approval for a bottled water plant. Project was successful in receiving clearance and was constructed.

Managed investigation and risk assessment for shallow fuel hydrocarbon impacts at maintenance facility at San Francisco International Airport for airline under RWQCB oversight. Negotiated No Further Action for site.

Managed investigation, risk assessment, and site decommissioning for major maintenance facility at Oakland International Airport for airline under RWQCB and Alameda County oversight. Performed extensive drilling, aquifer testing, groundwater flow evaluations, fate and transport modeling, human health-ecological risk assessments, and waste disposal to assist with facility closure.

Managed investigation and risk assessment of jet fuel releases associated with fuel hydrant system and tank farm at Seattle-Tacoma International Airport for airline under Washington Department of Ecology oversight. Negotiated fuel system in-place closure and *No Further Action* for jet fuel in vadose zone.

Performed investigation of jet fuel releases at several active boarding areas at Los Angeles International Airport for ensure compliance with RWQCB requirements. Investigations involved subsurface evaluations and hydrostatic pressure testing of fuel hydrant systems. Performed risk evaluations and feasibility studies of remedial alternatives. Negotiated compliance with airport authority and RWQCB.

Investigated jet fuel release and impacts to subsurface pedestrian tunnel in active boarding area at Los Angeles International Airport. Performed extensive air monitoring and risk assessment to ensure worker and passenger safety. Negotiated with airport authority and responsible parties to facilitate mitigation of air quality impacts to tunnel to reduce risks related to jet fuel impacts.

Investigated fuel hydrocarbon and chlorinated solvent impacts to soil and groundwater at a large maintenance facility at Los Angeles International Airport. Project involves LNAPL recovery with skimmers and ongoing multiphase investigation.

Performed technical oversight of other consultants and represented client in PRP groups for investigation and remediation projects on behalf of airline for projects at Seattle-Tacoma International Airport, San Francisco International Airport, and Phoenix Sky Harbor International Airport.

Provided technical oversight for soil and groundwater investigations (fuel and solvent sites), aquifer testing, natural attenuation evaluations, groundwater modeling, pilot testing, and interim remedial actions at Portland Air National Guard Base, Portland International Airport, OR. Negotiated with Oregon DEQ.

Performed surface and groundwater impact study of a former dolomite mine near Sonora, CA. The mine includes surface and underground operations, and the primary concern was impacts to streams and groundwater. Generated report on liabilities that need to be addressed in reclamation.

Evaluated groundwater resources and environmental impacts for due diligence evaluation of water supply development projects in Republic of Tajikistan, Poland, Israel, Switzerland, Russia, Ukraine, India, Mexico, Guatemala, Argentina, Peru, Brazil, and Chile. Negotiated environmental requirements and financial terms with funding sources and governmental agencies involved in investments.

Provided technical direction in developing and implementing efficient subsurface investigation based on borehole geophysics to map fractures as preferential flow paths and to delineate plume for PRP group in Benicia, CA. Project involves investigation and remediation of chlorinated VOC plume.

Directed development and implementation of efficient subsurface investigation based on borehole geophysics to map fractures as preferential flow paths at transportation facility maintenance station in the Sierra Nevada. Used results to delineate plume and demonstrate that receptors (stream and private wells) were not at risk.

Investigated hydrogeologic conditions and occurrence of DNAPL and dissolved phase VOCs at rail yard in Sacramento, CA. Evaluated site stratigraphy, groundwater flow, and migration of VOCs via extensive drilling, geophysical surveys, aquifer testing, and monitoring. Implemented focused source and plume margin interim remedial measures to prevent further migration of VOCs in groundwater. Quantified natural attenuation of VOCs and developed coupled groundwater flow and solute transport model for Feasibility Study evaluations. Site involves extensive impacts and complex transient groundwater flow system connected to major rivers. Developed and negotiated cost-effective final remedy optimizing natural attenuation and active remediation with DTSC and RWQCB. Investigated and remediated multisource shallow hydrocarbon and metals (lead) contamination in soil. Environmental cleanup has led to large Brownfields redevelopment.

Investigated several leaking underground storage tank sites in Sierra Nevada region, CA. Sites characterized by gasoline constituents in fractured granite aquifer. Designed and implemented comprehensive approaches using outcrop fracture mapping, drilling, geophysical logging, and aquifer testing. Installed and operated combined soil vapor extraction and groundwater extraction remediation systems to attain site closure and *No Further Action* determinations under RWQCB oversight.

Provided investigation, hydrogeologic analysis, remediation, and strategic planning for major refinery involving several MTBE sources and pipeline leak of over 3 million gallons of gasoline in Bakersfield, CA. Conducted extensive investigation, geophysical surveys, well surveys, water well replacement, aquifer testing, pilot studies, and groundwater modeling. Prioritized resources and activities to focus on risk-based remediation and developed related \$24-million environmental reserve budget. Optimized soil vapor extraction, LNAPL recovery, groundwater infiltration, and groundwater extraction to cost-effectively manage risks. Prioritized 37 sites at refinery to sequence remediation and closure as necessary. Completed due diligence and compliance projects as well. Facility under RWQCB oversight.

Performed investigation and interim and final remediation at Fresno-Yosemite International Airport, CA for PRP group. Concern was widespread TCE impacts to sole source aquifer in area of numerous public and private water supply wells. Oversight performed by RWQCB, DTSC, and DHS-ODW. Conducted expedited groundwater investigation to define extent of TCE to depth of 300 feet over several square miles. Conducted borehole geophysical surveys to define site conditions, extensive monitoring, natural attenuation evaluations, well surveys to locate numerous impacted and at-risk wells, water well replacement, and PRP searches. Participated in public meetings to address community concerns. Performed aquifer testing and developed groundwater modeling as input to engineering evaluation/cost analysis to optimize plume capture and replacement of lost water supply with 2,000-gpm wellhead treatment system for use in Fresno water supply system. Performed in situ chemical oxidation pilot study. Completed remedial investigation and feasibility study to define long-term plume management remedy, as well as developed Contingency Plan for monitoring and replacing at-risk water supply wells near the plume, as necessary.

Investigated soil, surface water, and groundwater degradation resulting from 180 tons of buried elemental phosphorus in wetlands. Assessed groundwater-surface water interactions and chemical fate and transport, including plant uptake. Prepared Removal Action Workplan to evaluate feasibility of remedial options. Negotiated in-place closure based on fate and transport analysis documenting immobility of phosphorus, saving client \$6 million relative to excavation program originally proposed by DTSC.

Performed integrated hydrogeologic study of multilayer, coastal aquifer system at industrial landfill at Mare Island Naval Shipyard in Vallejo, CA. Used aquifer monitoring and testing to evaluate groundwater flow, tidal influences, and contaminant transport.

Performed and managed many Phase I/II ESA, due diligence projects for a wide range of properties and clients to document liabilities and facilitate property transfers.

Determined distributions and possible sources of hazardous organic and inorganic substances in soil and groundwater at chemical storage and transfer facility to assess real estate transaction liability.

Investigated metals, organic compounds, and naturally occurring chrysotile asbestos at proposed sewer construction site in San Francisco, CA. Determined potential human health risks and hazardous waste disposal requirements.

Geologist for U.S. Nuclear Regulatory Commission, providing evaluations of potential high-level radioactive waste repository sites throughout the US and in Germany. Used geologic, geophysical, and hydrologic data from Basalt Waste Isolation Project, Deaf Smith County bedded salt, and Yucca Mountain volcanic highlevel radioactive waste repository sites to evaluate site licensing. Evaluated uranium mine tailings under UMTRA program for sites in the western US in light of reclamation requirements.

Intern geologist with USGS Eastern Minerals Division assessing disseminated gold deposits in the southern Appalachians.

Used stratigraphic and seismic reflection data to complete seismic modeling project and evaluate petroleum-producing potential of paleozoic carbonates in area of Midland Basin for major oil company.

Integrated lithologic/structural field data and petrographic analysis to characterize geology of area in southern New Brunswick, Canada for master's thesis.

Deborah Scanlon Wall

Ms. Deborah Scanlon Wall is a Senior Project Manager located in ERM's Walnut Creek, California office and has more than 16 years experience in the field of environmental consulting. Ms Scanlon Wall has conducted Phase I environmental assessments, compliance assessments, and asbestos services, and project management for industrial, commercial, and multi-family residential facilities located throughout the Unites States and areas of Mexico and Spain.

Ms. Scanlon Wall has conducted over 500 Phase I environmental assessments which are compiled from site visits, personnel interviews, research of various agency records, and historical documents. She has expertise in review of aerial photographs, topographic maps, Sanborn Fire Insurance Maps, and agency record search reports that have allowed her to complete Phase I reports for each site. Ms. Scanlon Wall has also managed environmental assessment portfolios ranging from 5 to 25 sites throughout the United States. Clients include industry, attorneys, healthcare providers, educational facilities, brokers, and developers.

Ms. Scanlon Wall has conducted and managed hazardous materials surveys at various facility types across the United States and in various areas of Mexico and Spain. Surveys included assessments for asbestos, lead-based paint, and other hazardous materials. Asbestos services conducted include demolition level and pre-acquisition surveys, abatement cost estimating, abatement management, preparation of Operations & Maintenance Programs, and General Awareness Training.

Ms. Scanlon Wall has conducted medical waste compliance assessments at numerous hospitals throughout California, assisting healthcare facilities with assessing current medical waste handling practices, compliance with the California Medical Waste Management Act, and assisting with pharmaceutical waste programs.

Ms. Scanlon Wall has conducted exit audits of biotechnology facilities, assisting facility tenants with site closure, including interaction with regulatory agencies, removal of hazardous materials, and overseeing required cleaning and permit closures.

Key Projects

Environmental Site Assessments

Commercial Nurseries, Northern California

Conducted Phase I and limited compliance assessments at several commercial nursery facilities in northern California. Conducted site visits, reviewed historical documents, analytical data, and regulatory agency records and prepared detailed reports, including compliance needs for each site.

Golf Courses, United States and Britain

Project Manager for a large multi-site Phase I assessment project during a merger of two golf course entities. Conducted and managed numerous Phase I assessments at various sites throughout the United States and Britain. Conducted site visits, reviewed historical documents, analytical data, and regulatory agency records and prepared detailed reports, including the need for Phase II subsurface investigations. Also assisted with management of the Phase I investigations.

Marine Terminals, Southern California

Conducted Phase I and limited compliance assessments at marine terminals in the San Pedro and Long Beach areas of southern California. Conducted site visits, reviewed historical documents, analytical data, and regulatory agency records and prepared detailed reports, including compliance needs for each site.

Steelscape, Richmond, CA

Conducted a Phase I assessment at a steel manufacturing facility in Richmond, California. Conducted site visits, reviewed historical documents, analytical data, and regulatory agency records and a prepared a detailed report, including information on known and potential soil and groundwater impacts.

Hospitals, United States

Project Manager for a major healthcare entity, conducted Phase I assessments at numerous hospital complexes throughout California, Louisiana, Missouri, Florida and other states during purchases and sales of facilities. Also conducted site visits at many of the facilities, and prepared detailed reports, including the need for Phase II subsurface investigations.

Steel Mill, Colorado

Conducted a Phase I assessment of a large steel mill in Colorado. The assessment included a site visit, review of historical documents, analytical data, and regulatory agency records and preparation of a detailed report. The Phase I included a review and assessment of numerous Solid Waste Management Units on-site, identified by the local regulatory agencies.

Western Digital, Northern California

Conducted Phase I assessments at various semiconductor facilities in northern California. Conducted site visits, reviewed historical documents, analytical data, and regulatory agency records and prepared detailed reports.

Asbestos Services

Biotechnology Facilities, Western and Eastern United States

Project Manager for a biotechnology property owner with sites located along the western and eastern coasts of the United States. Managed and conducted asbestos surveys and asbestos regulation compliance during property purchases and renovations. Prepared Operations & Maintenance Programs, and managed asbestos abatement projects. Developed and conducted internal and external asbestos training programs, including asbestos awareness training for property managers that focused on compliance with applicable state and federal regulations.

Multi-Family Residential Complex, Northern California

Project Manager for asbestos surveys and abatement oversight at a 3,000-unit apartment complex, with activities conducted over a 2 ½ year time period. Services provided included conducting surveys prior to renovations, coordinating daily schedules of the abatement contractor and air monitoring staff for abatement in up to 80 apartment units per month.

El Arbol, Spain

Conducted asbestos surveys at grocery stores throughout Spain. Surveys were conducted during regular operating hours. Also conducted co-worker training during survey activities. Prepared reports detailing survey findings.

1/14/2013 DEBORAH SCANLON WALL

Steelscape, Richmond, CA

Managed asbestos surveys and abatement oversight at a steel manufacturing facility in Richmond, California. Surveys and abatement were conducted during site occupation and once the facility had been vacated.

University of Southern California, Los Angeles, CA

Project Manager for a campus-wide asbestos assessment program. Managed and conducted asbestos surveys of classroom, laboratory, administration, and support buildings throughout the main and medical school campuses, and provided reports detailing survey results.

Western Digital, Northern California

Managed and conducted asbestos surveys of various semi-conductor facilities in northern California, and prepared reports detailing survey findings.

Medical Waste Compliance

Hospital Complexes, San Francisco, CA

Managed and assisted with hazardous materials, hazardous waste, and medical waste portions of an environmental impact report for a proposed hospital, which included assessment of various departments to be re-located from three current hospital campuses.

Hospital Complexes, Southern California

Conducted medical waste compliance projects on two major southern California hospitals, including assessing current medical waste handling practices, assisting with California Medical Waste Management Act compliance, assisting with a pharmaceutical waste program, and assisting legal counsel with threatened criminal enforcement.

1/14/2013 DEBORAH SCANLON WALL

Bailey Blosser

Ms. Bailey Blosser is a Staff III Scientist with over three years of experience in the environmental consulting industry. Ms. Blosser works closely with the Mergers and Acquisitions (M&A) and Contaminated Site Management (CSM) practices within ERM. Her experience includes conducting Phase I and Phase II Environmental Site Assessments, groundwater sampling and monitoring programs, and soil, soil vapor, and groundwater investigations for transportation, manufacturing, and other industrial clients. She has planned and conducted investigation activities at ANG sites, airports, and distribution and manufacturing sites in Northern California.

Ms. Blosser has conducted numerous Phase I environmental assessments which are complied from site visits, personnel interviews, research of various agency records and historical documents. She has expertise in review of aerial photos, topographic maps, Sanborn Fire Insurance Maps, and agency record search reports that have allowed her to complete Phase I reports for each site. Clients include industry, consultants, attorneys, brokers, developers, and governmental agencies.

Ms. Blosser has also participated in sample collection and testing of drinking water for major airlines at San Francisco International Airport and Oakland International Airport. Ms. Blosser has provided construction oversight and conducted other miscellaneous field work. Additional experience includes participation in an impact site assessment study for the California High-Speed Train project and participation in an Environmental Impact Report for the Central California Coastal Seismic Imaging Project.

Fields of Competence

- Phase I and Phase II Environmental Site Assessments
- Regulatory compliance
- Hazardous waste, soil, and groundwater investigations
- Groundwater monitoring and remediation programs
- Drilling and sampling technologies
- · Active and passive soil vapor sampling
- Data analysis
- Soil logging
- Construction oversight

Education

Key Projects

Company Confidential, Pleasant Hill, California

Assisted with site investigation activities involving a regional VOC groundwater plume in Pleasant Hill, CA. Multiple parties have contributed to the VOC groundwater plume, which extends beneath a residential neighborhood. Soil vapor and indoor air impacts have resulted in the residential neighborhood from the commingled VOC plume. Conducted soil vapor, indoor air, and groundwater sampling using helium shroud method for soil vapor, Summa canisters for indoor air, and passive diffusion samplers, low flow, and traditional techniques for groundwater.

California Air National Guard, Hayward, California

Participated in site investigation activities involving soil impacted by TPH, VOCs, Lead, and PAHs for Air National Guard property. Responsibilities included the oversight of direct push drilling activities and the logging and collection of soil for lab analyses. Coordinated and conducted large-scale quarterly groundwater monitoring events. Organized sampling schedules and field activities. Trained new personnel to perform sampling. Groundwater sampling techniques included using bailers and peristaltic pumps. Assisted in the preparation of quarterly groundwater monitoring reports.

KB Homes, Northern California

Conducted Phase I Environmental Site Assessments (ESAs) on developed and undeveloped properties throughout Northern California.

California High Speed Train - San Francisco to San Jose Section and San Jose to Merced Section, California

Conducted hazardous materials and environmental site assessments of a 50-mile north-south trending corridor proposed to be constructed in San Francisco, San Mateo, and Santa Clara Counties and a 125-mile east-west trending corridor proposed to be constructed in Santa Clara, Merced, and Madera Counties as part of the California High Speed Train Project. The project involved review, analysis and compilation of environmental information and multiple-day site reconnaissance's along the proposed corridor to observe site and surrounding areas. Managed staff, assigned project work, identified properties of potential environmental concern along the proposed corridor, and provided recommendations for additional investigation. Produced a comprehensive environmental report that identified areas of potential hazardous impact and provided recommendations for mitigation.

Benicia, California

Participated in site investigation activities involving TCE in groundwater at a warehouse facility in Benicia, California. Conducted groundwater sampling using bailers and passive diffusion bags for groundwater.

San Francisco International Airport, San Francisco, California

Oversaw field operation of mobile high-vacuum extraction system to recover LNAPL at active boarding areas of San Francisco International Airport for both the Airport Common and a major airline. Documented recovered LNAPL for reporting.

United Airlines Potable Water Testing, San Francisco, California

Participated in sample collection and testing of drinking water for a major airline at San Francisco International Airport.

Southwest Airlines Potable Water Testing, Oakland, California

Participated in sample collection and testing of drinking water for a major airline at Oakland International Airport.

Biotechnology Facilities, Northern California

Conducted Phase I ESAs on numerous biotech facilities throughout Northern California including Cisco and Ethicon-Endo, a subsidiary of Johnson & Johnson.

Pasadera Golf and Country Clubs, Monterey, California Conducted a Phase I ESA for a 200-acre golf and country

Conducted a Phase I ESA for a 200-acre golf and country club in Monterey, California.

Gary Farrell Winery, Sonoma County, California

Conducted a Phase I ESA and limited regulatory compliance review of the Gary Farrell Winery in Healdsburg, California.

BlackRidge Real Estate Group, Southern California

Conducted multiple Phase I ESAs on developed properties throughout Southern California.

Baxa, Denver, Colorado

Conducted a Phase I ESA and limited regulatory compliance review of a medical device manufacturing facility located in Denver, Colorado. Conducted extensive site history research and communications with regulatory personnel.

1/14/2013 BAILEY BLOSSER

Burke Industries, San Jose, California

Conducted a Phase I ESA for a company that manufactures rubber flooring and rubber wall boards. The Phase I involved extensive historical land use research, regulatory agency review, and review and summarization of site investigation reports, feasibility studies, monitoring reports, and human health risk assessments due to known soil and groundwater contamination on site from a neighboring facility.

MASCO Corporation, Northern California

Conducted Phase I ESAs, tenant exit reviews, and limited regulatory compliance reviews of various building products storage warehouses, commercial buildings, and facilities throughout the Bay Area.

Company Confidential, Northern California

Conducted numerous Phase I ESAs on developed and undeveloped properties including China Basin, commercial properties, and agricultural land throughout Northern California.

Centennial Corridor, California Department of Transportation, Bakersfield & Kern County, California

Conducted a hazardous materials and environmental site assessment for a 12-mile east-west trending corridor proposed to be constructed in Kern County to connect Interstate 5 with Highway 99 through the City of Bakersfield. Identified areas of potential hazardous material impact and provided recommendations for mitigation.

Turret Steel Industries, Northern California

Conducted Phase I ESA and limited regulatory compliance review of a steel bar storage and cutting warehouse in Dos Palos, California.

Sonoma County Water Agency and Sonoma Valley County Sanitation District, Northern California

Conducted hazardous materials and environmental site assessments as part of the Sonoma County wide effort to replace existing sewer lines and sewer trunk lines throughout Sonoma, California. The project involved review, analysis and compilation of environmental information, interview with site personnel, and multipleday site reconnaissance's along the propose sewer replacement lines to observe site and surrounding areas. Identified properties of potential environmental concern along the existing sewer lines and produced a comprehensive environmental report that identified areas of potential hazardous impact and provided recommendations for mitigation. Follow-up work

included preparing the proposals, scopes of works, and budget estimates to the client for Phase II ESAs.

PG&E, Northern California

Conducted numerous Phase I and Limited Phase II ESAs on undeveloped properties throughout Northern California.

Central California Coastal Seismic Imaging Project, San Luis Obispo, California

Assisted in the preparation of an Environmental Impact Report (EIR) on behalf of PG&E for the California State Lands Commission. Responsibilities included preparing the existing conditions and regulatory settings in the EIR, using CEQA guidelines. Other tasks included preparing the Aesthetics, Hazards and Hazardous Materials, and Traffic and Transportation sections in the EIR.

Sirna, San Francisco, California

Performed decontamination oversight work for a biotech facility in San Francisco, California.

1/14/2013 BAILEY BLOSSER
