Subject: RE: RO2967: site#1028, 5300 Broadway, Oakland: Request to Discontinue Sampling

Lia,
At this time it appears that groundwater monitoring is no longer needed. If this changes, ACEH will notify you.

Subject: RO2967: site#1028, 5300 Broadway, Oakland: Request to Discontinue Sampling

Hi Barb,

We've recently submitted the 3Q2011 Quarterly Monitoring Report for the subject case number. In this report Antea Group made the following conclusions and recommendations:

- Antea Group and subcontractors conducted a quarterly monitoring event on August 8th, 2011.
- Groundwater flow was directed to the northwest at a hydraulic gradient of 0.048 feet per foot.
- Only MTBE was reported above laboratory reporting limits, at a concentration below the ESL.
- Antea Group submitted a *Soil and Groundwater Investigation Report and Request for Case Closure* dated February 22nd, 2011. The report documented the installation of the site's three monitoring wells and recommended case closure based on the site conditions and closure criteria.

- Concentrations reported during the site's environmental case closure in 1994 are generally consistent with data associated with the well installation investigation and with the current quarter's groundwater results. Antea Group believes that elevated concentrations reported during the 2007 ATC investigation were false positives, not representative of actual groundwater conditions, and that the site meets the criteria for case closure.
- The third quarter 2011 marks four consecutive quarters of groundwater monitoring and five total groundwater sampling events since the site's wells were installed.
- Antea Group continues to recommend case closure by the ACEH.
- **Antea Group requests that monitoring and sampling is allowed to cease while the agency reviews the case for closure.**

Will you allow for the discontinuation of monitoring and sampling while the case is reviewed for closure?

Your consideration is greatly appreciated.

Lia
