Type of Services	<b>Soil Excavation Work Plan</b>
Location	<b>Ashland Youth Center San Lorenzo, California</b>

## SECTION 1: INTRODUCTION

### 1.1 PURPOSE

This Work Plan (WP) has been prepared for the excavation of soil for the construction of the new Ashland Youth Center at 16335 East 14<sup>th</sup> Street in San Lorenzo, California (Site) (Figures 1 and 2). This work was prepared for Sandis and Alameda County General Services Agency (ACGSA) in accordance with our August 23, 2011 agreement.

### 1.2 PLANNED DEVELOPMENT

The project consists of the construction of an approximately 20,000 square foot youth center on the approximately 1 acre Site. Asphalt and concrete paved drive way and parking area, and hardscaped patio areas, and landscaping also will be constructed. A tot-lot is planned adjacent to the northeast corner of the building, adjacent to East 14<sup>th</sup> Street.

### 1.3 REMEDIAL ACTION OBJECTIVES

Removal action objectives (RAOs) are goals developed for the protection of human health and the environment and are based on chemical concentrations and potential exposure routes. Protection of human health can be achieved by reducing chemical concentrations and/or by eliminating exposure pathways.

The RAOs for the Site are to mitigate the threat to human health and the environment from the identified contaminant of concern (COC) (see Section 4.1) impacted soil in a manner consistent with unrestricted use of the Site. RAOs that are protective of human health and the environment have been established as below:

- To minimize exposure of humans to the COC in shallow soil through inhalation, dermal absorption, and ingestion;
- To minimize potential for migration of the COC from the soil to other media;
- To obtain a “No Further Action (NFA)” for unrestricted use for the Site from the Alameda County Health Care Services Agency (County Health) after implementation of the WP.

## SECTION 2: SITE BACKGROUND

### 2.1 SITE HISTORY

The Site consists of three parcels: Parcel 80C-479-6-20 (16301 East 14<sup>th</sup> Street); 80-0479-006-08 (16343 East 14<sup>th</sup> Street), and; Parcel 80C-0479-006-09 (16349 East 14<sup>th</sup> Street).

#### 2.1.1 16301 East 14<sup>th</sup> Street

Holland Oil formerly operated on the adjacent parcel (APN 80C-479-9-21) and on the northwest and southwest portion of the on-Site parcel (Figure 2). Holland Oil operated as a bulk fuel storage and

distribution facility from the 1960's to the mid-1980's. Eight underground storage tanks (USTs) were located on the Holland Oil facility and appeared to be off-Site. Three of the USTs reportedly contained gasoline, two contained diesel, two contained kerosene and one contained Stoddard solvent. The Holland Oil facility also included a warehouse and a garage used for vehicle maintenance; these structures appear to have also been located off-Site. The USTs reportedly were removed in 1998 (Ninyo & Moore, 2009), and the remaining structures were demolished during 2011. The on-Site area located along East 14<sup>th</sup> Street and outside the Holland Oil facility area reportedly was used primarily for vehicle sales. Holland Oils fuel operations reportedly were not conducted on this portion of the Site (Amicus, 2009).

#### 2.1.1 16343 East 14<sup>th</sup> Street

This parcel formerly was occupied by an approximately 2,200 square foot building that reportedly was constructed by the early 1960s and used as a retail store and Moose lodge. From approximately 1970 to until early 2011 the building was occupied by a bar. The property reportedly was purchased by the Alameda County Redevelopment Agency (ACRDA) in December 2010 (Geocon, 2011). The on-Site building was demolished during 2011.

#### 2.1.2 16349 East 14<sup>th</sup> Street

This parcel was occupied by a building constructed in approximately 1910 and used as a blacksmith shop prior to 1968. As of December 2010, the building was occupied by a window tinting business. Occupants between 1968 and the window tinting business reportedly were not determined. This property reportedly was purchased by the ACRDA in January 2011 (Geocon, 2011). The on-Site building was demolished during 2011.

### 2.2 PREVIOUS SITE INVESTIGATIONS AND REMOVAL ACTIONS

The reported analytical data were compared to the California Human Health Screening Levels (CHHSLs) (Cal/EPA, September 2010). The CHHSLs are used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. Under most circumstances, the presence of a chemical in soil or soil gas at concentrations below the corresponding CHHSLs can be assumed not to pose a significant health risk. The San Francisco Regional Water Quality Control Board (Water Board 2008) also has developed Environmental Screening Levels (ESLs). The ESLs are a compilation of screening levels for not only risk to human health but a number of other environmental concerns. Per Cal/EPA guidance (January 2005), "The ESLs are intended for use only at sites overseen by that agency". If a CHHSL doesn't exist for a detected compound, Cal/EPA recommends using the Regional Screening Levels (RSLs) developed by the EPA (Region 9, 2009). In the event there are no CHHSLs or RSLs available, such as for petroleum hydrocarbons, Cal/EPA allows the data to be compared to ESLs. In addition, naturally occurring background concentrations of metals, such as arsenic (amongst others), in soil may exceed their respective CHHSLs. Cal/EPA generally does not require cleanup of soil to below background concentrations. This issue is frequently encountered with arsenic. Thus, for the metals detected, these data also were compared to regional background levels (Bradford, 1996).

#### 2.2.1 16301 East 14<sup>th</sup> Street

A series of soil, soil vapor and ground water quality investigations have been performed on-Site in association with the investigations performed on the Holland Oil facility. A majority of the samples were collected from off-Site areas. Investigation activities performed on-Site included the drilling of six exploratory borings for the collection of soil samples, the installation and sampling of six soil vapor probes, and the installation of one ground water monitoring well (MW-9). An additional monitoring well, MW-3, was formerly located near the northwest corner of the Site (Figure 2) (Ninyo & Moore, 2009). Selected results are discussed below.

#### Soil Quality

Exploratory borings B-2, B-7, SB-11 and SB-12 were drilled during 2007 and 2008 in the southwest portion of the Site that overlapped the Holland Oil facility. Laboratory analyses of soil samples collected from the upper approximately 2 feet reportedly detected up to 15,000 parts per million (ppm) total petroleum hydrocarbons in the diesel range (TPHd) and 4,600 ppm total petroleum hydrocarbons in the kerosene range (TPHk). Concentrations generally appeared to decrease with depth; TPHd was detected at 1.2 ppm in the sample collected from a depth of approximately 6 ½ feet from boring B-2. TPHd was detected at 2,300 ppm at a depth of approximately 8 feet in boring SB-11, but was not detected at a depth of approximately 11 feet. The residential/unrestricted ESL for TPHd and TPHk is 83 ppm.

Several volatile organic compounds (VOCs) were detected in the soil samples, including naphthalene detected at 2.7 ppm and 15 ppm in the soil samples collected from a depth of approximately 3 feet and 8 feet from boring SB-11. In addition, 4 ppm naphthalene reportedly was detected in the soil sample collected from a depth of approximately 2 feet from boring SB-12 (Ninyo & Moore, 2009). The residential/unrestricted ESL for naphthalene is 1.3 ppm.

Borings SB-9 and SB-10 were reportedly drilled in the central portion of the Site outside the area formerly occupied by Holland Oil. Laboratory analyses of soil samples collected from these two borings reportedly did not detect petroleum hydrocarbons or naphthalene. Acetone (up to 0.34 ppm; unrestricted ESL = 0.5 ppm), 2-Butanone (up to 0.07 ppm; no ESL established), and carbon disulfide (up to 0.0045 ppm; no ESL established) reportedly were detected in soil samples (Ninyo & Moore, 2009).

#### Soil Vapor Quality

Six soil vapor probes reportedly were installed during October 2008 in the area of the planned youth center building. Soil vapor samples reportedly were collected from a depth of approximately 5 feet. Several VOCs were detected in the soil vapor samples but at concentrations below unrestricted ESLs. VOCs detected were benzene (2 µg/m<sup>3</sup> in one sample; unrestricted ESL = 84 µg/m<sup>3</sup>), 2-Butanone (13 µg/m<sup>3</sup> maximum; no ESL established), acetone (610 µg/m<sup>3</sup> maximum; unrestricted ESL = 66,000 µg/m<sup>3</sup>), carbon disulfide (4.6 µg/m<sup>3</sup> in one sample; no ESL established), toluene (19 µg/m<sup>3</sup> maximum; unrestricted ESL = 63,000 µg/m<sup>3</sup>), and xylene (17 µg/m<sup>3</sup> maximum; unrestricted ESL = 21,000 µg/m<sup>3</sup>) (Ninyo & Moore, 2008).

#### Ground Water Quality

Ground water reportedly is present at a depth of approximately 8 feet below the original ground surface and flows toward the northwest. Ground water monitoring well MW-9 formerly was located on the central portion of the Site, and ground water monitoring well MW-3 formerly was located within approximately 25 feet of the northwest corner of the Site. Laboratory analyses of ground water samples collected from well MW-9 during October 2008 reportedly did not detect TPHd, TPHg, or VOCs. Laboratory analyses of ground water samples collected from well MW-3 during July 2007 reportedly detected 62 parts per billion (ppb) TPHd. TPHg and VOCs reportedly were not detected. In addition, laboratory analyses of ground water samples collected from well MW-3 during October 2008 did not detect TPHd, TPHg or VOCs (Ninyo & Moore, 2009).

#### 2.2.2 16343 and 16349 East 14<sup>th</sup> Street

To evaluate potential impacts to these two parcels from the former Holland Oil facility, two ground water grab samples (SB-1 and SB-2) were reportedly collected from the Site during December 2010. Ground water reportedly was encountered at depths of approximately 7 ½ feet to 8 ½ feet. Laboratory analyses of the ground water grab samples reportedly did not detect TPHg, TPHg, Total Petroleum Hydrocarbons in the motor oil range (TPHmo), Total Petroleum Hydrocarbons in the kerosene range (TPHk), Total Petroleum Hydrocarbons in the Stoddard solvent range (TPHss), or VOCs (Geocon, 2011).

Laboratory analyses of soil samples collected from a depth of approximately 5 feet from each boring did not detect petroleum hydrocarbons or VOCs, with the exception of 5.8 ppm TPHd and 20 ppm TPHmo detected in one of the two soil samples (Geocon, 2011).

### 2.2.3 September 2009 Removal Action

A Corrective Action Plan (CAP) was prepared for the over-excavation and removal of petroleum impacted soil identified on the Holland Oil facility. The CAP was approved by County Health. Planned excavations included two areas (B1 and B2) within the area where the oil facility operations extended onto the southwest portion of the Site (Figure 2). Excavations B1 and B2 were to be excavated to a depth of approximately 6 feet and were located in the areas where prior borings encountered soil with petroleum hydrocarbon and naphthalene concentrations above ESLs. In addition, the CAP also included the excavation of soil to a depth of approximately 1 foot over the remainder of the Holland Oil facility (designated as Area C), including the portion that extended onto the Site (Amicus, 2009).

Soil removal activities were performed during September 2009. Approximately 200 cubic yards of soil were removed from each of the B1 and B2 excavations to a depth of approximately 6 feet. Four sidewall samples were collected from a depth of approximately 3 feet from each location and one bottom sample was collected. The verification soil samples were analyzed for TPHg and TPHd. Laboratory analyses reportedly did not detect TPHd or TPHg above the residential/unrestricted ESL of 83 ppm, with the exception of 210 ppm TPHd detected in the bottom soil sample from excavation B2. This soil sample location reportedly was re-sampled, and laboratory analysis of the second sample reportedly detected 9.1 ppm TPHd. The ACDEH approved leaving this soil in-place. Verification sampling reportedly was not performed in the area of the Site excavated to a depth of approximately 1 foot (Ninyo & Moore, 2009).

The lower portion of excavations B1 and B2 were backfilled with the soil excavated and stockpiled from Area C that contained up to 220 ppm TPHd and 0.15 ppm polychlorinated biphenyls (PCBs). The remainder of the excavation reportedly originated from the northeast corner of 16301 East 14<sup>th</sup> Street (off-Site) in an area reportedly used as a car dealership. Because historical documentation reportedly did not indicate any environmental concerns associated with the northeast portion of the parcel, no samples of the material reportedly were collected for laboratory analyses (Ninyo & Moore, 2009).

### 2.3 GEOTECHNICAL INVESTIGATION

Based on a geotechnical investigation performed during September 2009, subsurface materials reportedly observed on-Site consisted of stiff clay and clayey sand fill to a depth of approximately 2 ½ to 3 feet. Alluvial soil consisting of lean clay, fat clay, clayey sand and silty sand reportedly was observed beneath the fill the maximum depth explored of approximately 50 feet (Ninyo & Moore, 2011).

Remedial grading consisting of the excavation of the undocumented fill was recommended. Use of the excavated fill as backfill was acceptable provided the material meets the project geotechnical requirements (Ninyo & Moore, 2011).

### 2.4 AUGUST 2011 CONSTRUCTION ACTIVITIES

Grading activities began on-Site on August 16, 2011. The deeper (6 feet deep) excavations previously backfilled (excavations B1 and B2) were initially over-excavated and the material stockpiled on-Site. The remainder of the Site was to be over-excavated to a depth of approximately 3 feet for re-compaction as engineered fill as discussed above. During this initial excavation process, soil with significant petroleum odors reportedly were encountered. The excavation was stopped pending additional soil quality evaluation, discussed below in Section 3. Approximately 1,000 cubic yards of excavated soil were stockpiled on-Site.

To help evaluate re-use or disposal alternatives of the excavated soil, three composite soil samples were collected by Rockridge Geotechnical from the excavated and stockpiled soil. Laboratory analyses of the composite soil samples detected TPHd and TPHo at concentrations of up to 220 parts per million (ppm) and 970 ppm, respectively. Laboratory analyses also detected total polychlorinated biphenyls (PCBs) ranging from 0.089 ppm to 0.162 ppm. Concentrations of metals detected generally appeared to be consistent with typical background levels, with the exception of lead detected from 92 ppm to 120

ppm. Lead concentrations in California soils typically ranges from approximately 12 ppm to 97 ppm (Bradford, 1996). The residential/unrestricted CHHSL for lead is 80 ppm.

The composite soil samples were additionally analyzed for soluble lead (Soluble Threshold Limit Concentration [STLC]) to help evaluate disposal alternatives. Laboratory analyses detected soluble lead at concentrations ranging from 0.11 ppm to 0.2 ppm. The California hazardous waste limit for soluble lead is 5 ppm.

### **SECTION 3: AUGUST 2011 SOIL QUALITY INVESTIGATION**

#### **3.1 SOIL SAMPLE COLLECTION**

An informal sampling and analyses plan prepared by Cornerstone was approved by County Health prior to the fieldwork.

To help evaluate the lateral and vertical extent of petroleum impacted soil encountered during the initial grading activities, twenty-one exploratory test pits were excavated on August 30, 2011 to a depth of approximately 5 feet below original ground surface. Test pit locations were selected using a 50 foot grid. Some of the test pits (TP-14 through TP-19, TP-21 and TP-22) were excavated in the area that already had been excavated to a depth of approximately 3 feet. Therefore, these pits were excavated an additional 2 feet for a total of 5 feet below original grade. In addition, test pit TP-20 was located in the former B2 excavation area that had already been excavated to approximately 6 feet below original grade. This test pit was excavated an additional approximately 2 feet deeper, to a depth of approximately 8 feet below original grade, to collect soil samples from the depth where prior sampling had detected TPHd and naphthalene above residential/unrestricted ESLs.

Soil samples were collected from test pits TP-1 to TP-13 from depths of approximately  $\frac{1}{2}$  to 1 foot, 2 to 2  $\frac{1}{2}$  foot, 3 to 3  $\frac{1}{2}$  feet, and 4  $\frac{1}{2}$  to 5 feet. From test pits TP-14 to TP-19, TP-21 and TP-22 soil samples were collected from the upper  $\frac{1}{2}$  of soil and from the base of the test pits (approximately 3 to 3  $\frac{1}{2}$  feet and 4  $\frac{1}{2}$  to 5 feet below original grade). In addition, a soil sample was collected from the base of test pit TP-20 (approximately 8 to 8  $\frac{1}{2}$  feet below original grade) in the general area of previous boring SB-11 (see Section 2.2.1).

Soil samples were collected in pre-cleaned stainless steel liners, the ends of the liners were covered in Teflon film, fitted with plastic end caps, taped, and labeled with a unique identification number. According to EPA protocol, samples collected for VOCs analyses were collected in 5-gram Core-N-1 capsules in triplicate.

Soils observed in the test pits generally consisted of gravelly clay fill to a depth of approximately 2 to 3 feet below the ground surface. A layer of dark grey sandy material was observed at a depth of approximately 1 to 2 feet in test pit TP-7. In addition, asphalt, glass fragments and possible charcoal fragments were observed in the fill in test pit TP-9 between approximately 2 to 3 feet below the ground surface. Native clay was observed beneath the fill to a depth of approximately 4 feet below the ground surface, and was underlain by sandy clay to the maximum depth explored of approximately 8 feet below the ground surface.

#### **3.2 LABORATORY ANALYSES**

To help evaluate the lateral and vertical extent of impacted soil encountered during the initial grading activities, soil samples collected from depths of approximately  $\frac{1}{2}$  to 1 feet, 2 to 2  $\frac{1}{2}$  feet, 3 to 3  $\frac{1}{2}$  feet and 4  $\frac{1}{2}$  to 5 feet below the ground surface were analyzed for TPHg and volatile organic compounds (VOCs) (EPA Test Method 8260), TPHd and TPHmo (EPA Test Method 8015M) with a silica gel cleanup. In addition, due to the presence of undocumented fill on-Site, the soil samples were additionally analyzed for organochlorine pesticides (OCP) and PCBs (EPA Test Method 8081/8082), 17 California Assessment Manual (CAM) metals (EPA Test Method 6000/7000) and polynuclear aromatic hydrocarbons (PAHs)

(EPA Test Method 8270SIM). The soil sample collected from a depth of approximately 8 to 8 ½ feet from test pit TP-20 was analyzed for TPHg, VOCs, TPHd and TPHmo to evaluate current soil quality in the general area of previous boring SB-11.

To help evaluate disposal alternatives of the soil, samples exceeding 50 ppm lead were additionally analyzed for soluble lead using the Waste Extraction Test (WET) (Soluble Threshold Limit Concentration [STLC]). Samples exceeding 1,000 ppm total lead were analyzed for soluble lead using the federal Toxicity Characteristic Leaching Procedure (TCLP).

Laboratory analytical results are summarized in Tables 1, 2, 3 and 4 in the Data Summary Tables section of this report. Laboratory analytical reports are presented in Appendix A.

### **3.3 DISCUSSION OF RESULTS**

Laboratory analyses of the soil samples did not detect TPHg, VOCs or OCPs above regulatory agency screening levels.

Laboratory analyses of soil samples detected TPHd and TPHmo above the residential/unrestricted ESLs of 83 ppm and 370 ppm, respectively, in soil samples collected from test pits TP-1 (110 ppm TPHd at ½ to 1 foot), TP-8 (2,100 ppm TPHd at ½ to 1 foot; 4,200 ppm TPHmo at ½ to 1 foot), TP-11 (150 ppm TPHd at ½ to 1 foot; 660 ppm TPHmo at ½ to 1 foot), TP-14 (180 ppm TPHd at 3 to 3 ½ feet; 670 ppm TPHd at 4 ½ to 5 feet), and TP-18 (2,700 ppm TPHd at 3 to 3 ½ feet; 4,900 ppm TPHmo at 3 to 3 ½ feet). Concentrations detected decreased with depth; the vertical extent of the petroleum impacted soil is not defined at TP-14 and TP-18. Test pits TP-8, TP-14 and TP-18 were located in the northwest portion of the Site that formerly overlapped the Holland Oil facility.

Lead was detected in 7 of 67 soil samples above the residential/unrestricted CHHSL of 80 ppm. Concentrations in these 7 soil samples ranged from 140 ppm (TP-19, 3-3 ½ feet) to 1,700 ppm (TP-13, 2-2 ½ feet); 1,500 ppm lead was detected in the soil sample collected from a depth of approximately 2 to 2 ½ feet from TP-9. The California hazardous waste limit for total lead is 1,000 ppm. The elevated lead concentrations generally appeared to be detected in soil samples collected from the fill within the upper approximately 2 to 3 ½ feet. Based on the soluble lead STLC results that exceeded 5 ppm, soil exceeding the residential/unrestricted CHHSL may require off-Site disposal as a California hazardous waste. In addition, 11 ppm soluble lead was detected in sample TP-8 (1 – 1 ½), which had a detected total lead concentration of 57 ppm. Sample TP-10 (2 – 2 ½) was inadvertently analyzed for soluble lead, which was detected at 110 ppm. Because total lead was detected at 39 ppm in this sample, the soluble lead result may be anomalous.

PCBs were detected exceeding the residential/unrestricted CHHSL of 0.089 ppm in two out of 67 soil samples: TP-8 (½ to 1 foot) (0.22 ppm total PCBs), and; TP-11 (½ to 1 foot) (0.19 ppm total PCBs).

PAHs were detected above residential CHHSLs and RSLs in two of 69 samples analyzed (TP-7 [1 – 1 ½ foot and TP-8 [½ to 1 foot]). Soil sample TP-7 (1 to 1 ½ foot) was collected from a layer of black sand-like material observed in the test pit between depths of approximately 1 to 2 feet. As noted above, the building that formerly occupied the area of the Site where TP-7 was excavated reportedly was used as a blacksmith shop.

### **SECTION 4: CLEANUP GOALS**

As noted in Section 1.3, ACGSA desires to obtain a no-further-action determination from ACDEH for unrestricted Site use. Therefore, residential/unrestricted ESLs, CHHSLs and RSLs are proposed for the Site cleanup goals. For zinc, the California hazardous waste limit is lower than the residential/unrestricted CHHSL and is proposed as the cleanup goal for the Site. Contaminants of concern (COC) identified for the Site (constituents detected above residential/unrestricted screening levels) and the corresponding cleanup goals are presented in Table 5.

Based on analytical results of previous ground water quality investigations (see Section 2.2.1), ground water beneath the Site does not appear significantly impacted by diesel or oil range petroleum hydrocarbons. Therefore, the direct exposure ESL for TPHd and TPHmo are proposed as the cleanup goals. In the deeper (6 feet deep) excavation area, if TPHd and/or TPHo are detected above the cleanup goals, we will discuss with County Health whether a health risk assessment could be performed to evaluate whether the soil may remain in-place or whether additional excavation is required.

**Table 5. Cleanup Goals**

Contaminant	Residential/Unrestricted Site Use Cleanup Goal (ppm)	Basis
Arsenic	11	Background*
Cadmium	1.7	CHHSL
Lead	80	CHHSL
Zinc	5,000	TTLC
PCBs (total)	0.089	CHHSL
Benzo[a]anthracene	0.15	RSL
Benzo[b]flouranthene	1.5	RSL
Benzo[a]pyrene	0.038	CHHSL
Indeno[1,2,3-cd]pyrene	0.15	RSL
Dibenzo[a,h]anthracene	0.015	RSL
TPHd	110	ESL (direct contact)
TPHo	370	ESL (direct contact)

\*Bradford, et.a., 1996.

## SECTION 6: SOIL EXCAVATION

### 6.1 SUMMARY OF APPROACH

As a conservative approach, the soil remedial approach selected by the ACGSA is the over-excavation and off-Site disposal of the surficial fill to a depth of approximately 3 feet. In addition, soil will be excavated to a depth of approximately 6 feet in the northwest portion of the Site, including the area of test pits TP-14 and TP-18 (Figure 2).

### 6.2 INITIAL SOIL SEGREGATION AND DISPOSAL

Based on the analytical data, some of the soil may require disposal as a California hazardous waste at a Class I disposal facility. Soil samples collected from test pits TP-3, TP-5, TP-7, TP-8, TP-9, TP-10, TP-13, TP-14 and TP-19 contained lead that exceeded California hazardous waste limits. To segregate soil at these locations from remaining soil and to help evaluate disposal alternatives, soil at these locations will be initially excavated to a depth of approximately 3 feet and stockpiled on-Site adjacent to the excavations. The stockpiles will be placed on plastic sheeting. Verification soil samples will be collected from the sidewalls of the excavations and analyzed for total lead at a state certified laboratory. If lead concentrations do not exceed 50 ppm lead (ten times the STLC limit), additional excavation will not be performed. In addition, one 4-point composite sample will be collected from the excavated/stockpiled soil at each of these locations. Each composite soil sample will be analyzed for total lead and soluble lead (STLC and TCLP) to evaluate disposal alternatives.

Stockpiled soil that exceeds hazardous waste limits will be removed for off-Site disposal at a Class I facility. Soil that is accepted for disposal as a non-hazardous waste will be removed for disposal during the subsequent excavation discussed below.

Because the verification soil sampling performed during this phase is for waste segregation purposes and not for determining the extent of cleanup, these results will not be submitted to the County Health for review until submission of the completion report discussed below.

### **6.3 EXCAVATION AND OFF-SITE DISPOSAL OF SURFICIAL FILL**

After removal of soil for Class I disposal, the remainder of the Site will be excavated to a depth of approximately 3 feet. The intent of the 3 foot deep excavation is to remove the surficial fill material. An environmental professional will be present on-Site part time during the excavation to observe the fill removal and guide the contractor in additional excavation if pockets of deeper fill are observed. The extent of the approximately 3 feet deep excavation is shown on Figure 3. Excavation depths will be surveyed by a licensed surveyor to document that the soils were excavated to a depth of 3 feet.

Analytical results of soil samples collected from the exploratory test pits excavated August 30, 2011 from the 3 feet excavation area will be used as verification points for the vertical excavation (test pits TP-1 to TP-13, TP-15, TP-16, TP-17, TP-19, TP-21 and TP-22). Laboratory analyses of soil samples collected from depths of 3 feet and below from these test pits did not detect COCs above the proposed cleanup goals. As approved by County Health during a meeting on September 22, 2011, no additional verification samples will be collected from the area of the Site excavated for the removal of the surficial fill.

The soil will be excavated and directly loaded onto trucks for transportation to a Class II disposal facility.

### **6.4 EXCAVATION AND OFF-SITE DISPOSAL OF SOIL FROM NORTHWEST AREA OF SITE**

Soil in the northwest portion of the Site (Figure 3) will be excavated to a depth of approximately 6 feet. This soil will be direct loaded onto trucks for transportation to a Class II non-hazardous waste disposal facility.

To confirm soil quality, verification soil samples will be collected from the base of the excavation, at a depth of approximately 6 feet, from the areas of test pits TP-14 and TP-18. The verification soil samples will be submitted to a State certified laboratory and analyzed for TPHd and TPHmo (EPA Test Method 8015M) with a silica gel cleanup and VOCs (EPA Test Method 8260).

Soil samples will be collected in pre-cleaned stainless steel liners, the ends of the liners will be covered in Teflon film, fitted with plastic end caps, taped, and labeled with a unique identification number. According to EPA protocol, samples collected for VOCs analyses will be collected in 5-gram Core-N-1 capsules in triplicate.

Analytical results will be compared to Site cleanup goals summarized in Section 4. If one or more COC is detected above the Site cleanup goals, results will be discussed with County Health staff to determine whether additional excavation will be required.

## **6.5 IMPLEMENTATION**

### **6.5.1 Contractor Qualification**

Soil excavation activities will be performed by a licensed hazardous materials contractor (Contractor), and personnel with training in hazardous waste operations (40-hour OSHA Training).

### **6.5.2 Permitting**

A grading permit already has been obtained for the work by ACGSA. The Contractor will notify the Bay Area Air Quality Management District (BAAQMD) and Occupational Safety and Health Association (OSHA) of the work. Permits are not anticipated from these agencies.

### **6.5.3 Utility Clearance**

To attempt to locate public underground utilities, and as required by law, the soil excavation contractor shall mark the work area with white spray paint and contact Underground Service Alert (USA) at least 48 hours prior to the initiation of earthwork activities.

### **6.5.4 Health and Safety Plan**

The Contractor performing the excavation, loading and transportation will be responsible for operating in accordance with the most current requirements of Title 8, California Code of Regulations, section 5192 (8 CCR 5192) and Title 29, Code of Federal Regulations, section 1910.120 (29 CFR 1910.120), Standards for Hazardous Waste Operations and Emergency Response (HAZWOPER). On-Site personnel are responsible for operating in accordance with all applicable regulations of the Occupational Safety and Health Administration (OSHA) outlined in 8 CCR General Industry and Construction Safety Orders and 29 CFR 1910 and 29 CFR 1926, Construction Industry Standards, as well as other applicable federal, state and local laws and regulations. All personnel shall operate in compliance with all California OSHA requirements.

A Site-specific health and safety plan (HASP) will be prepared by the excavation contractor to establish health and safety protocols for personnel working in the impacted areas. This HASP meets federal and State of California (OSHA) standards for hazardous waste operations (29 CFR 1910.120 and 8 CCR 5192).

The Contractor will be responsible for the health and safety of their own workers, including but not limited to preparation of their own HASP and injury and illness prevention plan (IIPP). The Contractor's HSP will establish health and safety protocols for Contractor personnel in accordance with federal and State of California OSHA standards. The HASP shall contain provisions for limiting chemical exposure to construction workers, chemical and non-chemical hazards, emergency procedures, and standard safety protocols. Employees conducting earthwork activities at the Site shall complete a 40-hour HAZWOPER training course (29 CFR 1910.120 (e)), including respirator and personal protective equipment training.

### **6.5.5 Site Security**

The entire property is fenced. Access and egress will be controlled via a gate on East 14<sup>th</sup> Street. The gate will be locked after working hours. Access to the Site will be limited to authorized personnel.

### **6.5.6 Decontamination Procedures**

Decontamination procedures of equipment that comes into contact with Site soil may include both dry and/or wet methods. Dry methods are the primary means of decontamination and consist of brushing and scraping of equipment to remove soil. If dry methods are not effective, wet methods may be used such as steam cleaning or pressure washing without detergent. The Contractor shall provide washtubs with soap and water and rinse tubs for the cleaning of reusable equipment.

Water used for on-Site decontamination will be collected and applied to the bioremediation area as part of the moisture conditioning of the soil.

### **6.5.7 Dust and Erosion Control**

The Contractor will utilize effective means of dust and erosion control to minimize the generation of dust and erosion associated with excavation activities, truck and vehicle traffic onto and off the Site, and the effects of ambient wind traversing exposed soil. Total dust levels and erosion shall be mitigated during Site activities, as necessary, using a combination of engineering controls that may include:

- Misting or spraying water during soil excavation and loading of soil transportation vehicles

- Minimizing drop heights of soil during loading/unloading activities
- Minimizing (as appropriate) water used in dust control
- Rapid cleanup of soil dropped or tracked onto paved roadways
- Temporary gravel surfacing placed along site entrances/exits

If visible dust is observed by Site personnel, dust control measures will be increased.

#### **6.5.8 Storm Water Pollution Controls**

A Storm Water Pollution Prevention Plan (SWPPP) already has been prepared for the Site. The Contractor is required to follow the storm water pollution controls presented in the SWPPP.

#### **6.6 BACKFILLING**

Soil will be imported to backfill the Site to the final design elevations. The grading contractor is required to place and compact backfill in accordance with the project geotechnical engineer's specifications.

The grading contractor will be required to provide adequate documentation so it can be verified that the fill source is appropriate for unrestricted use at the Site. The documentation should include detailed information on previous land use of the fill source, any environmental site assessments performed and the findings, and the results of any analytical testing performed. If no documentation is available or the documentation is inadequate, or if no analytical testing has been performed, samples of the potential fill material should be collected and analyzed. The analyses performed should be based on the fill source and knowledge of the previous land use. The sample frequency for potential fill material should be in accordance with that outlined in the technical document titled, "*Information Advisory on Clean Imported Fill Material*" (DTSC, October 2001). A copy of this guidance is included in Appendix C. Documentation of the quality/source of the imported soil will be presented in the completion report (Section 7.5), if provided to Cornerstone Earth Group.

#### **6.7 SOIL EXCAVATION COMPLETION REPORT**

The results of the confirmation soil sampling, disposal documentation, and documentation provided regarding the quality of the imported soil will be presented in a Soil Removal Completion Report.

### **SECTION 7.0 VAPOR INTRUSION CONTROL MEASURES**

Although significant concentrations of VOCs have not been reported in soil vapor or ground water beneath the Site, as a conservative measure, ACGSA plans to install a spray-applied (minimum of 80 mil thickness) vapor membrane beneath the floor of the new building. Details of the membrane design are not yet available but will be submitted to County Health for review prior to construction.

### **SECTION 8.0: SCHEDULE**

It is anticipated that the soil removal will begin within approximately 1 week of receiving approval of this work plan by County Health. Performance of the work is anticipated to take approximately two to three weeks to complete. Analytical results will be forwarded to County Health for their review when received from the laboratory. Preparation of the Soil Removal Completion Report will take approximately one additional week to complete after receiving the analytical results and disposal documentation.

## SECTION 9.0: LIMITATIONS

This work plan was prepared for the sole use of Sandis, ACGSA and County Health in evaluating the proposed soil removal at the Site. This work plan, an instrument of professional service, may not be reproduced or distributed without written authorization from Cornerstone.

Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.

## CASE NARRATIVE

Laboratory number: **230932**  
Client: **Rockridge Geotechnical**  
Project: **11-319**  
Location: **Ashland Youth Center**  
Request Date: **09/09/11**  
Samples Received: **08/30/11**

This data package contains sample and QC results for eleven soil samples, requested for the above referenced project on 09/09/11. The samples were received cold and intact.

**Metals (EPA 6010B) TCLP Leachate:**

No analytical problems were encountered.

**Metals (EPA 6010B) WET Leachate:**

No analytical problems were encountered.

## COOLER RECEIPT CHECKLIST

Curtis &amp; Tompkins, Ltd.

Login # 230661 Date Received 8/30/11 Number of coolers 2  
 Client Rockridge Geotechnical Project Ashland Youth Center

Date Opened 8/30/11 By (print) Isabelle (sign) I.S.  
 Date Logged in L By (print) V. Darski (sign) V.D.

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES  NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler  on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES  NO  N/A

3. Were custody papers dry and intact when received?  YES  NO

4. Were custody papers filled out properly (ink, signed, etc)?  YES  NO

5. Is the project identifiable from custody papers? (If so fill out top of form)  YES  NO

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) \_\_\_\_\_

Samples Received on ice & cold without a temperature blank

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES  NO

If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened?  YES  NO

10. Are samples in the appropriate containers for indicated tests?  YES  NO

11. Are sample labels present, in good condition and complete?  YES  NO

12. Do the sample labels agree with custody papers?  YES  NO

13. Was sufficient amount of sample sent for tests requested?  YES  NO

14. Are the samples appropriately preserved?  YES  NO  N/A

15. Did you check preservatives for all bottles for each sample?  YES  NO  N/A

16. Did you document your preservative check?  YES  NO  N/A

17. Did you change the hold time in LIMS for unpreserved VOAs?  YES  NO  N/A

18. Are bubbles > 6mm absent in VOA samples?  YES  NO  N/A

19. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES  NO

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

## CASE NARRATIVE

Laboratory number: **230931**  
Client: **Rockridge Geotechnical**  
Project: **11-319**  
Location: **Ashland Youth Center**  
Request Date: **09/09/11**  
Samples Received: **08/30/11**

This data package contains sample and QC results for five soil samples, requested for the above referenced project on 09/09/11. The samples were received cold and intact.

**TPH-Extractables by GC (EPA 8015B):**

TP-8 (3-3 1/2) (lab # 230931-001) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

**Metals (EPA 6010B):**

No analytical problems were encountered.

## COOLER RECEIPT CHECKLIST

Login # 230661 Date Received 8/30/11 Number of coolers 2  
 Client Rockridge Geotechnical Project Ashland Youth Center

Date Opened 8/30/11 By (print) Isabelle (sign) I.S.  
 Date Logged in 1 By (print) V. Darski (sign) V.D.

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES  NO  
 Shipping info \_\_\_\_\_
- 2A. Were custody seals present? ....  YES (circle) on cooler  on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_
- 2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES  NO  N/A
3. Were custody papers dry and intact when received? \_\_\_\_\_ YES  NO
4. Were custody papers filled out properly (ink, signed, etc)? \_\_\_\_\_ YES  NO
5. Is the project identifiable from custody papers? (If so fill out top of form)  YES NO
6. Indicate the packing in cooler: (if other, describe)  
 Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels
7. Temperature documentation: \* Notify PM if temperature exceeds 6°C  
 Type of ice used:  Wet  Blue/Gel  None Temp(°C) \_\_\_\_\_  
 Samples Received on ice & cold without a temperature blank  
 Samples received on ice directly from the field. Cooling process had begun
8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES  NO  
 If YES, what time were they transferred to freezer? \_\_\_\_\_
9. Did all bottles arrive unbroken/unopened?  YES NO
10. Are samples in the appropriate containers for indicated tests?  YES NO
11. Are sample labels present, in good condition and complete?  YES NO
12. Do the sample labels agree with custody papers?  YES NO
13. Was sufficient amount of sample sent for tests requested?  YES NO
14. Are the samples appropriately preserved? \_\_\_\_\_ YES  NO  N/A
15. Did you check preservatives for all bottles for each sample? \_\_\_\_\_ YES  NO  N/A
16. Did you document your preservative check? \_\_\_\_\_ YES  NO  N/A
17. Did you change the hold time in LIMS for unpreserved VOAs? \_\_\_\_\_ YES  NO  N/A
18. Are bubbles > 6mm absent in VOA samples? \_\_\_\_\_ YES  NO  N/A
19. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES  NO  
 If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

## CASE NARRATIVE

Laboratory number: 230661  
Client: Rockridge Geotechnical  
Project: 11-319  
Location: Ashland Youth Center  
Request Date: 08/30/11  
Samples Received: 08/30/11

This data package contains sample and QC results for forty one soil samples, requested for the above referenced project on 08/30/11. The samples were received cold and intact.

### **TPH-Purgeables and/or BTXE by GC (EPA 8015B):**

Matrix spikes were not performed for this analysis in batch 178597 due to insufficient sample amount. Matrix spikes were not performed for this analysis in batch 178599 due to insufficient sample amount. No other analytical problems were encountered.

### **TPH-Extractables by GC (EPA 8015B):**

Many samples were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

### **Volatile Organics by GC/MS (EPA 8260B):**

Matrix spikes were not performed for this analysis in batch 178562 due to insufficient sample amount. Matrix spikes were not performed for this analysis in batch 178560 due to insufficient sample amount. High surrogate recoveries were observed for bromofluorobenzene in TP-18 (0-1/2) (lab # 230661-010) and TP-20 (2-2 1/2) (lab # 230661-066); no target analytes were detected in these samples. No other analytical problems were encountered.

### **Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):**

High surrogate recoveries were observed for nitrobenzene-d5 in TP-14 (0-1/2) (lab # 230661-008), TP-14 (1 1/2-2) (lab # 230661-009), and TP-18 (1 1/2-2) (lab # 230661-011). Many samples were diluted due to the dark and viscous nature of the sample extracts. TP-18 (0-1/2) (lab # 230661-010) and TP-18 (1 1/2-2) (lab # 230661-011) were diluted due to high non-target analytes. No other analytical problems were encountered.

### **Pesticides (EPA 8081A):**

All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. All samples underwent florisil cleanup using EPA Method 3620C. High response was observed for endrin in the CCV analyzed 09/04/11 00:54; affected data was qualified with "b". High response was observed for endrin in the CCV analyzed 09/04/11 02:44; affected data was qualified with "b". Low surrogate recoveries were observed for decachlorobiphenyl in TP-18 (0-1/2) (lab # 230661-010) and TP-18 (1 1/2-2) (lab # 230661-011); the corresponding TCMX surrogate recoveries were within limits. Many samples were diluted due to the color of the sample extracts. No other analytical problems were encountered.

## CASE NARRATIVE

Laboratory number: **230661**  
Client: **Rockridge Geotechnical**  
Project: **11-319**  
Location: **Ashland Youth Center**  
Request Date: **08/30/11**  
Samples Received: **08/30/11**

### **PCBs (EPA 8082):**

All samples underwent sulfuric acid cleanup using EPA Method 3665A. All samples underwent sulfur cleanup using the copper option in EPA Method 3660B. Low surrogate recovery was observed for decachlorobiphenyl in TP-18 (0-1/2) (lab # 230661-010); the corresponding TCMX surrogate recovery was within limits. No other analytical problems were encountered.

### **Metals (EPA 6010B and EPA 7471A):**

Low recoveries were observed for cobalt and chromium in the MS/MSD of TP-1 (1/2-1) (lab # 230661-001); the BS/BSD were within limits. High RPD was observed for chromium and nickel; the RPD was acceptable in the BS/BSD. No other analytical problems were encountered.

## COOLER RECEIPT CHECKLIST

Curtis &amp; Tompkins, Ltd.

Login # 230661 Date Received 8/30/11 Number of coolers 2  
 Client Rockridge Geotechnical Project Ashland Youth Center

Date Opened 8/30/11 By (print) SABELLE (sign) SABELLE  
 Date Logged in + By (print) V. Darski (sign) V. Darski

1. Did cooler come with a shipping slip (airbill, etc) \_\_\_\_\_ YES  NO  
 Shipping info \_\_\_\_\_

2A. Were custody seals present? ....  YES (circle) on cooler on samples  NO  
 How many \_\_\_\_\_ Name \_\_\_\_\_ Date \_\_\_\_\_

2B. Were custody seals intact upon arrival? \_\_\_\_\_ YES  NO  N/A

3. Were custody papers dry and intact when received?  YES  NO

4. Were custody papers filled out properly (ink, signed, etc)?  YES  NO

5. Is the project identifiable from custody papers? (If so fill out top of form)  YES  NO

6. Indicate the packing in cooler: (if other, describe) \_\_\_\_\_

Bubble Wrap  Foam blocks  Bags  None  
 Cloth material  Cardboard  Styrofoam  Paper towels

7. Temperature documentation: \* Notify PM if temperature exceeds 6°C

Type of ice used:  Wet  Blue/Gel  None Temp(°C) \_\_\_\_\_

Samples Received on ice & cold without a temperature blank

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? \_\_\_\_\_ YES  NO  
 If YES, what time were they transferred to freezer? \_\_\_\_\_

9. Did all bottles arrive unbroken/unopened?  YES  NO

10. Are samples in the appropriate containers for indicated tests?  YES  NO

11. Are sample labels present, in good condition and complete?  YES  NO

12. Do the sample labels agree with custody papers?  YES  NO

13. Was sufficient amount of sample sent for tests requested?  YES  NO

14. Are the samples appropriately preserved?  YES  NO  N/A

15. Did you check preservatives for all bottles for each sample?  YES  NO  N/A

16. Did you document your preservative check?  YES  NO  N/A

17. Did you change the hold time in LIMS for unpreserved VOAs?  YES  NO  N/A

18. Are bubbles > 6mm absent in VOA samples?  YES  NO  N/A

19. Was the client contacted concerning this sample delivery? \_\_\_\_\_ YES  NO  N/A

If YES, Who was called? \_\_\_\_\_ By \_\_\_\_\_ Date: \_\_\_\_\_

**APPENDIX B**  
**DTSC CLEAN FILL ADVISORY**

# Information Advisory Clean Imported Fill Material

**DEPARTMENT OF TOXIC SUBSTANCES CONTROL**

## Executive Summary

*This fact sheet has been prepared to ensure that inappropriate fill material is not introduced onto sensitive land use properties under the oversight of the DTSC or applicable regulatory authorities. Sensitive land use properties include those that contain facilities such as hospitals, homes, day care centers, and schools. This document only focuses on human health concerns and ecological issues are not addressed. It identifies those types of land use activities that may be appropriate when determining whether a site may be used as a fill material source area. It also provides guidelines for the appropriate types of analyses that should be performed relative to the former land use, and for the number of samples that should be collected and analyzed based on the estimated volume of fill material that will need to be used. The information provided in this fact sheet is not regulatory in nature, rather is to be used as a guide, and in most situations the final decision as to the acceptability of fill material for a sensitive land use property is made on a case-by-case basis by the appropriate regulatory agency.*

## Introduction

The use of imported fill material has recently come under scrutiny because of the instances where contaminated soil has been brought onto an otherwise clean site. However, there are currently no established standards in the statutes or regulations that address environmental requirements for imported fill material. Therefore, the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) has prepared this fact sheet to identify procedures that can be used to minimize the possibility of introducing contaminated soil onto a site that requires imported fill material. Such sites include those that are undergoing site remediation, corrective action, and closure activities overseen by DTSC or the appropriate regulatory agency. These procedures may also apply to construction projects that will result in sensitive land uses. The intent of this fact sheet is to protect people who live on or otherwise use a sensitive land use property. By using this fact sheet as a guide, the reader will minimize the chance of introducing fill material that may result in potential risk to human health or the environment at some future time.

*The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our website at [www.dtsc.ca.gov](http://www.dtsc.ca.gov).*

## Overview

Both natural and manmade fill materials are used for a variety of purposes. Fill material properties are commonly controlled to meet the necessary site specific engineering specifications. Because most sites requiring fill material are located in or near urban areas, the fill materials are often obtained from construction projects that generate an excess of soil, and from demolition debris (asphalt, broken concrete, etc.). However, materials from those types of sites may or may not be appropriate, depending on the proposed use of the fill, and the quality of the assessment and/or mitigation measures, if necessary. Therefore, unless material from construction projects can be demonstrated to be free of contami-

nation and/or appropriate for the proposed use, the use of that material as fill should be avoided.

## Selecting Fill Material

In general, the fill source area should be located in nonindustrial areas, and not from sites undergoing an environmental cleanup. Nonindustrial sites include those that were previously undeveloped, or used solely for residential or agricultural purposes. If the source is from an agricultural area, care should be taken to insure that the fill does not include former agricultural waste process byproducts such as manure or other decomposed organic material. Undesirable sources of fill material include industrial and/or commercial sites where hazardous ma-

## Potential Contaminants Based on the Fill Source Area

### Fill Source:

Land near to an existing freeway

### Target Compounds

Lead (EPA methods 6010B or 7471A), PAHs (EPA method 8310)

Land near a mining area or rock quarry

Heavy Metals (EPA methods 6010B and 7471A), asbestos (polarized light microscopy), pH

Agricultural land

Pesticides (Organochlorine Pesticides: EPA method 8081A or 8080A; Organophosphorus Pesticides: EPA method 8141A; Chlorinated Herbicides: EPA method 8151A), heavy metals (EPA methods 6010B and 7471A)

Residential/acceptable commercial land

VOCs (EPA method 8021 or 8260B, as appropriate and combined with collection by EPA Method 5035), semi-VOCs (EPA method 8270C), TPH (modified EPA method 8015), PCBs (EPA method 8082 or 8080A), heavy metals including lead (EPA methods 6010B and 7471A), asbestos (OSHA Method ID-191)

\*The recommended analyses should be performed in accordance with USEPA SW-846 methods (1996). Other possible analyses include Hexavalent Chromium: EPA method 7199

## Recommended Fill Material Sampling Schedule

Area of Individual Borrow Area	Sampling Requirements
2 acres or less	Minimum of 4 samples
2 to 4 acres	Minimum of 1 sample every 1/2 acre
4 to 10 acres	Minimum of 8 samples
Greater than 10 acres	Minimum of 8 locations with 4 subsamples per location
Volume of Borrow Area Stockpile	Samples per Volume
Up to 1,000 cubic yards	1 sample per 250 cubic yards
1,000 to 5,000 cubic yards	4 samples for first 1000 cubic yards + 1 sample per each additional 500 cubic yards
Greater than 5,000 cubic yards	12 samples for first 5,000 cubic yards + 1 sample per each additional 1,000 cubic yards

aterials were used, handled or stored as part of the business operations, or unpaved parking areas where petroleum hydrocarbons could have been spilled or leaked into the soil. Undesirable commercial sites include former gasoline service stations, retail strip malls that contained dry cleaners or photographic processing facilities, paint stores, auto repair and/or painting facilities. Undesirable industrial facilities include metal processing shops, manufacturing facilities, aerospace facilities, oil refineries, waste treatment plants, etc. Alternatives to using fill from construction sites include the use of fill material obtained from a commercial supplier of fill material or from soil pits in rural or suburban areas. However, care should be taken to ensure that those materials are also uncontaminated.

### Documentation and Analysis

In order to minimize the potential of introducing contaminated fill material onto a site, it is necessary

to verify through documentation that the fill source is appropriate and/or to have the fill material analyzed for potential contaminants based on the location and history of the source area. Fill documentation should include detailed information on the previous use of the land from where the fill is taken, whether an environmental site assessment was performed and its findings, and the results of any testing performed. It is recommended that any such documentation should be signed by an appropriately licensed (CA-registered) individual. If such documentation is not available or is inadequate, samples of the fill material should be chemically analyzed. Analysis of the fill material should be based on the source of the fill and knowledge of the prior land use.

Detectable amounts of compounds of concern within the fill material should be evaluated for risk in accordance with the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual. If

---

metal analyses are performed, only those metals (CAM 17 / Title 22) to which risk levels have been assigned need to be evaluated. At present, the DTSC is working to establish California Screening Levels (CSL) to determine whether some compounds of concern pose a risk. Until such time as these CSL values are established, DTSC recommends that the DTSC PEA Guidance Manual or an equivalent process be referenced. This guidance may include the Regional Water Quality Control Board's (RWQCB) guidelines for reuse of non-hazardous petroleum hydrocarbon contaminated soil as applied to Total Petroleum Hydrocarbons (TPH) only. The RWQCB guidelines should not be used for volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCS). In addition, a standard laboratory data package, including a summary of the QA/QC (Quality Assurance/Quality Control) sample results should also accompany all analytical reports.

When possible, representative samples should be collected at the borrow area while the potential fill material is still in place, and analyzed prior to removal from the borrow area. In addition to performing the appropriate analyses of the fill material, an appropriate number of samples should also be determined based on the approximate volume or area of soil to be used as fill material. The table above can be used as a guide to determine the number of samples needed to adequately characterize the fill material when sampled at the borrow site.

## Alternative Sampling

A Phase I or PEA may be conducted prior to sampling to determine whether the borrow area may have been impacted by previous activities on the property. After the property has been evaluated, any sampling that may be required can be determined during a meeting with DTSC or appropriate regulatory agency. However, if it is not possible to analyze the fill material at the borrow area or determine that it is appropriate for use via a Phase I or PEA, it is recommended that one (1) sample per truckload be collected and analyzed for all com-

pounds of concern to ensure that the imported soil is uncontaminated and acceptable. (See chart on Potential Contaminants Based on the Fill Source Area for appropriate analyses). This sampling frequency may be modified upon consultation with the DTSC or appropriate regulatory agency if all of the fill material is derived from a common borrow area. However, fill material that is not characterized at the borrow area will need to be stockpiled either on or off-site until the analyses have been completed. In addition, should contaminants exceeding acceptance criteria be identified in the stockpiled fill material, that material will be deemed unacceptable and new fill material will need to be obtained, sampled and analyzed. Therefore, the DTSC recommends that all sampling and analyses should be completed prior to delivery to the site to ensure the soil is free of contamination, and to eliminate unnecessary transportation charges for unacceptable fill material.

Composite sampling for fill material characterization may or may not be appropriate, depending on quality and homogeneity of source/borrow area, and compounds of concern. Compositing samples for volatile and semivolatile constituents is not acceptable. Composite sampling for heavy metals, pesticides, herbicides or PAH's from unanalyzed stockpiled soil is also unacceptable, unless it is stockpiled at the borrow area and originates from the same source area. In addition, if samples are composited, they should be from the same soil layer, and not from different soil layers.

When very large volumes of fill material are anticipated, or when larger areas are being considered as borrow areas, the DTSC recommends that a Phase I or PEA be conducted on the area to ensure that the borrow area has not been impacted by previous activities on the property. After the property has been evaluated, any sampling that may be required can be determined during a meeting with the DTSC.

*For further information, call Richard Coffman, Ph.D., R.G., at (818) 551-2175.*
