GEOSCIENCE & ENGINEERING CONSULTING

October 18, 2017

RECEIVED

By Alameda County Environmental Health 5:23 pm, Nov 15, 2017

Mr. Mark Detterman
Alameda County Health Care Services
Local Oversight Program
1131 Harbor Bay Parkway, Suite 250
Alameda, California 94502

Subject: Data Package for the Sump, Soil-Gas and Soil Bores related to a Former Residential Underground Heating Oil Tank located at 811 Paramount Road, Oakland, CA.
(Alameda County Fuel Leak Case No. RO0003143 and CA GeoTracker Global ID T10000006106)

Dear Mr. Detterman:

Stellar Environmental Solutions, Inc. (Stellar Environmental), on behalf of the property owners, presents Alameda County Health Care Services (ACHCS) with the attached updated analytical summary tables, figures, boring logs and analytical laboratory reports of the findings of the recent soil bore, sump water, and soil-gas sampling requested by ACHCS.

The boring and sampling investigation was conducted on October 4; the soil-gas well SG5.5 sampling was conducted on October 10, 2017 and the underground utility survey was conducted on October 12, 2017 in accordance with our September 26, 2017 Workplan with inclusion of the scope of work discussed in the meeting at ACHCS's office on September 18, 2017. ACHCS's provided a conditional approval of the workplan in their letter dated September 28, 2017. A site meeting is planned for October 19, 2017 to review the data and identify the next steps toward closure.

The investigation was advanced to evaluate residual site soil contaminant source of indoor air vapor intrusion related to the former 350-gallon residential underground heating fuel storage tank (UST) that was removed on December 16, 2013. The objective of the current fieldwork focused on delineating the vertical and lateral extent of the elevated (hotspot) zone of total petroleum hydrocarbons (TPH) detected in soil at bore location SB7 that contained 4,700 - 20,000 mg/kg TPH-diesel; 860 - 2,000 mg/kg TPH-gasoline; and 38 mg/kg naphthalene that was concentrated between 8-14 feet below ground surface (bgs) and reported in the August 3, 2017 data package. This document report includes the results of investigative drilling and sampling of four

Mr. Mark Detterman

Alameda County Health Care Services Agency

Page 2 of 6

additional borings (SB8, SB9, SB10 and SB11) surrounding bore SB7, grab-water sampling of the site perimeter drain sump and sampling of soil-gas well SG5.5.

SOIL BORING, SAMPLING AND ANALYTICAL RESULTS

Soil boring and sampling was conducted on October 4, 2017 utilizing a Geoprobe direct push drill rig by Cascade Drilling under the oversight of Stellar Environmental. Soil borings were logged and soil was classified by visual methods in accordance with the Unified Soil Classification System (USCS). Soil encountered during this investigation ranged from clay to silty clayey fine sand and gravel with a predominance of silty clay to clayey fine sand.

A photoionization detector (PID) was used to assist in soil screening and sample selection; however, the PID response was limited and ranged from 0.0 – 1.3 parts per million by volume, no odors were detected and only a slight green color, potentially fuel related discoloration, was observed in bore SB8 from 4-8 feet bgs and in bore SB9 from 7-8 feet bgs.

Soil was collected from in each of these four bores from the depths of 7-7.5, 8.5-9, 11.5-12, 15.5-16 and 18 -18.5 feet bgs. Soil collected from the 18 foot depth was held for potential analysis if analytical results of the 16 foot deep sample showed contaminants in excess of regulatory screening criteria, however contamination at 16 feet was not detected above the ESLs and therefore the 18 foot depth soil sample was not analyzed.

Analytical results of soil collected between 7.5 and 16 feet bgs showed trace concentration of TPH as diesel ranging from non-detected to 3.0 mg/kg; trace TPH gasoline ranging from 0.17 to 0.34 mg/kg. None of the samples showed detections of hydrocarbon VOCs. Based on the new and previously collected soil data the residual elevated hydrocarbon soil contamination appears limited to approximately 10 cubic yards of contaminated soil containing residual TPH in excess of regulatory ESLs that extends approximately 2 to 4 feet around bore SB7 at a depth of about 7 to 16 feet bgs.

The location of soil bores with analytical results and the estimated extent of contaminated soil around bore SB7 is shown on Figure 6 in Attachment A. Current and historical soil boring logs are contained in Attachment C. The soil analytical results are summarized in Table 1 in Attachment B and the certified analytical results are contained in Attachment D.

SUMP WATER SAMPLING AND ANALYTICAL RESULTS

The site automatic sump pump was turned off and the site irrigation system was operated for 24 hours prior to the day of the planned sump water sample collection to allow water to infiltrate into the site French drain system and accumulate in the sump. A sample of the sump water was

collected on October 4, 2017 and analyzed to determine if surface water infiltrating through contaminated site soils was carrying contaminants into the perimeter drain system, potentially distributing contaminants that could contribute to vapor intrusion into the adjacent residence.

Analytical results of the sump water detected trace concentrations of TPH gasoline and toluene that are below applicable ESLs. The source of TPH in the sump likely originates from residual soil contaminants located a few feet away that are carried by meteoric water into the drainage system. The drainage system and its relationship to the sump is shown on Figure 6 in Attachment A. The low detection of TPH suggests that contaminants in the drain system is not a significant source for vapor intrusion into the site residence, however one sampling event may be inconclusive to rule out this pathway.

The analytical results are summarized in Table 2 in Attachment B. The certified analytical results are contained in Attachment D. The plan and design of the drain system is included in Attachment E.

SOIL-GAS WELL SG5.5 SAMPLING AND ANALYTICAL RESULTS

Soil-gas sampling of soil-gas well SG5.5 was conducted on October 10, 2017. Soil-gas sampling was not conducted during or within five days of a significant rain event (1/2-inch or greater) at the site, as specified in Department of Toxic Substance Control (DTSC) guidelines and six days after the site irrigation had remained off.

Soil-gas was analyzed by Method TO-15/TPH-gasoline-range and by EPA Method TO-17 for TPH-diesel and naphthalene. As specified by the method, a TO-17 duplicate sorbent tube sample. The contaminants of concern; TPH-gasoline, TPH-diesel, naphthalene and benzene showed a 1-2-fold magnitude drop in detected concentrations since the previous sampling event and the first time all compounds were below their respective ESLs.

The location of soil-gas well with analytical results is shown on Figure 5 in Attachment A. The analytical results are summarized in Table 3 in Attachment B and the certified analytical results are contained in Attachment D.

GEOPHYSICAL SURVEY AND RESULTS

A geophysical survey to identify utilities was conducted on October 12, 2017 by Subtronics, Inc., under the oversight of Stellar Environmental. A description of the instruments employed in the survey is presented below. The survey was focused on investigating the subsurface utilities that could potentially act as preferential pathway for migration of contaminants. The residential water and natural gas service the residence from Paramount Road on the north. The site electrical and

Mr. Mark Detterman

Alameda County Health Care Services Agency

October 17, 2017

Page 4 of 6

communication utilities service the site via above-ground (power pole) connections from Paramount Road. The sanitary sewer service exits the residence to the south. There was not enough access space in the crawl to survey the ground surface within the crawl space, however the utilities can be observed above ground within the crawl space and go underground outside of the building. The perimeter drainage system feeds into the outside sump located at the southeast corner of the residence. Water is pumped from the sump through a shallow (8 inch deep) pipe that runs along the east side of the house to where it discharges in the gutter on Paramount Road and if overwhelmed it will overflow into the sanitary sewer.

The site utilities and perimeter drainage system are shown on attached Figure 6. A map showing sanitary sewer and storm drain system provided by the City of Oakland Public works is included in Attachment E.

Geophysical Equipment Utilized

The specialized equipment used at the site includes a TW-6 M-Scope, Schondstedt GA-72-CD, RD-8000 and the GSSI system 4000 ground penetrating radar (GPR) with 400 MHz antenna.

TW-6 M-Scope

The Fisher TW-6 M-Scope is a split box inductive locator and metal detector mounted on a four-foot rod. The split box locator can detect metal lines “inductively”. The M-Scope is also used to detect buried metallic objects such as manhole covers, underground storage tanks, etc. The limits of detection for a TW-6 M-SCOPE are approximately five feet in depth.

Schondstedt GA-72-CD

The Schondstedt is a hand held magnetic gradiometer which detects the magnetic field caused by ferromagnetic objects. The Schondstedt produces an audible signal when it detects a variation in the magnetic field strength between the two sensors 14 in apart. In an area of little magnetic debris it can detect metallic objects up to 10 feet deep.

RD-8000

The RD-8000 is a radio-detection pipe and cable locating device that detects frequencies emitted by active electrical lines and telecommunication cables.

GSSI SIR-4000

A ground penetrating radar system graphically records subsurface structures. Both geological and man-made structures are recorded by the introduction of a pulse of electromagnetic energy into the ground. Reflected pulses received by the antenna are then processed for measurable contrast in electrical properties. The result is a visual pseudo-cross-sectional profile. Primary applications of the GPR are detecting UFST's, foundations, buried drums, previously excavated areas and detecting metallic and non-metallic utilities. The GPR depth penetration is severely limited by clay-rich soil. Radar waves can penetrate deeper in sandy and gravelly soils.

SENSITIVE RECEPTORS SURVEY AUGMENTATION

ACHCS previously requested that a well and sensitive receptor survey be conducted to identify potential receptors that could be impacted by site-sourced contaminant migration. Stellar Environmental completed a sensitive receptor survey as reported in the investigation report, dated July 20, 2015. However, pre the email from Mr. Detterman dated September 22, 2017 additional data on offsite wells and surface water bodies was requested to augment the original survey. These are discussed below. The Environmental Database well search map including location of surface water bodies is included in Attachment E.

Offsite Well Survey

Additional research was done to supplement the above findings reported in the July 20, 2015 report that included inquiries with the City of Oakland Public works and the East Bay Municipal Utilities District; however these agencies had no additional well records. The survey discussed in the July 20, 2015 report was conducted to identify all water wells within ¼ mile of the subject property. Water wells include groundwater monitoring wells and water supply wells (irrigation, domestic, industrial, and municipal) and heat exchange wells. Surrounding area well information was requested from the California Department of Water Resources (DWR), the California agency ultimately responsible for permitting water wells and retaining "Water Well Driller's Reports" showed 413 well records. The Alameda County Public Works database which essentially duplicates DWR's database showed 163 wells within a 1-mile radius. Stellar Environmental commissioned an Environmental Database Research Inc. (EDR) search of municipal and domestic wells within a 1-mile radius. Only 1 Federal supply well was listed but is not be threatened as it was located about 5,000 feet away in an upgradient and at higher elevation.

Mr. Mark Detterman
Alameda County Health Care Services Agency
October 17, 2017
Page 6 of 6

Downgradient Surface Water

The nearest surface water bodies are Sausal Creek located approximately 5,000 feet east of the site; Central Reservoir located 5,000 southeast and Lake Merritt Lake located about 5,000 feet west of the site. These water bodies ultimately drain to San Francisco Bay, located approximately 3.75 miles to the west of the site.

Notes:

TPHmo= total petroleum hydrocarbons as motor oil; TPHd = total petroleum hydrocarbons as diesel; TPHg = total petroleum hydrocarbons as gasoline

ESL = Environmental Screening Levels for residential sites where groundwater is considered a potential drinking water resource (Water Board, 2016, Final).

Analytical results in bold type exceed the ESLs; NLP = no ESL published

Analytical results shown as "<" and italicized indicate a non-detection (ND) or less than the laboratory reporting limit or method detection limit.

All concentrations are expressed in milligrams per kilogram (mg/kg); bgs = below ground surface

Sample concentrations reported on a dry weight basis. Moisture content in the soils ranged from 5 to 21%.

Other compounds detected but having no published ESLs include:

a) 1,2,4 trimethyl benzene; b) sec-butyl benzene; c) para-isopropyl toluene; d)n-butyl benzene; e) propylbenzene

f) 1,1,2,2-Tetrachlorethane; g) 4-Isopropyl toluene; h) 1,2,3-Trichlorobenzene

Notes:

ESL= Environmental Screening Level for shallow soil-gas at residential sites (Water Board 2016).

Results in **bold-face** type exceed regulatory ESLs; NLP= no level published

NA = not analyzed

NR = not relevant

Analytical results shown as “<” and italicized indicate a non-detection (ND) or less than the laboratory detection limit.

All results are reported in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) unless indicated otherwise

Notes:

ESL= Environmental Screening Level for residential Indoor-Air (Water Board 2016, Tier 1). Results in **bold** type exceed regulatory ESLs;

NLP= no level published ; NA = not analyzed

* = TO17 analysis reported to method detection limit, however method could not meet ESL for naphthalene for method TO17naphthalene analysis (Table 1).

j = indicates compound was detected below quantification limit and is an estimated value; All results are reported in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$)

Notes:

Soil-gas sample number in ID refers to sample diffuser depth. 1-liter. 's' indicates sorbent tube TO17 analysis; d = indicates duplicate sample

* = helium leak check during TO17 sorbent tube collection analyzed from in-line Summa

ESL = Environmental drinking water (Water Board 2013)

Analytical results in **bold-face** type exceed ESL

Analytical results shown as < and *italicized* indicate a non-detection or less than the laboratory detection limit.

NA = not analyzed; NR = not relevant

TVHg = total petroleum hydrocarbons as gasoline

$\mu\text{g}/\text{m}^3$ = micrograms per cubic meter

CASE NARRATIVE

Laboratory number: **293182**
Client: **Stellar Environmental Solutions**
Project: **2015-16**
Location: **Residential Heating UST Investigation**
Request Date: **10/04/17**
Samples Received: **10/04/17**

This data package contains sample and QC results for seventeen soil samples and one water sample, requested for the above referenced project on 10/04/17. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Water:

Low recoveries were observed for gasoline C7-C12 in the MS/MSD for batch 252350; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 252350; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:

Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 252439; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:

Matrix spikes QC903811, QC903812 (batch 252392) were not reported because the parent sample required a dilution that would have diluted out the spikes. DRUM COMP (lab # 293182-022) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:

N-butylbenzene, naphthalene, and 1,2,4-trichlorobenzene were detected between the MDL and the RL in the method blank for batch 252524; these analytes were not detected in the sample at or above the RL. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:

No analytical problems were encountered.

Moisture (ASTM D2216-98/CLP):

No analytical problems were encountered.

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? YES NO

4. Were custody papers filled out properly (ink, signed, etc)? YES NO

5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO

6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: Wet Blue/Gel None Temp(°C) _____

Temperature blank(s) included? Thermometer# _____ IR Gun# _____

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? _____ YES NO

If YES, what time were they transferred to freezer? _____

9. Did all bottles arrive unbroken/unopened? YES NO

10. Are there any missing / extra samples? YES NO

11. Are samples in the appropriate containers for indicated tests? YES NO

12. Are sample labels present, in good condition and complete? YES NO

13. Do the sample labels agree with custody papers? YES NO

14. Was sufficient amount of sample sent for tests requested? YES NO

15. Are the samples appropriately preserved? YES NO N/A

16. Did you check preservatives for all bottles for each sample? YES NO N/A

17. Did you document your preservative check? (pH strip lot# _____) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? YES NO N/A

21. Was the client contacted concerning this sample delivery? YES NO

If YES, Who was called? _____ By _____ Date: _____

CASE NARRATIVE

Laboratory number: **293329**
Client: **Stellar Environmental Solutions**
Project: **2015-16**
Location: **Paramount**
Request Date: **10/10/17**
Samples Received: **10/10/17**

This data package contains sample and QC results for one air sample, requested for the above referenced project on 10/10/17. The sample was received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):

No analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946-90 and EPA TO-3):

No analytical problems were encountered.

 Date Logged in 1 By (print) 1 (sign) J
 Date Labelled 1 By (print) 1 (sign) 1

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

2A. Were custody seals present? YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____

2B. Were custody seals intact upon arrival? _____ YES NO N/A

3. Were custody papers dry and intact when received? _____ YES NO N/A

4. Were custody papers filled out properly (ink, signed, etc)? _____ YES NO N/A

5. Is the project identifiable from custody papers? (If so fill out top of form) _____ YES NO N/A

6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation: *Notify PM if temperature exceeds 6°C

Type of ice used: Wet Blue/Gel None Temp(°C) _____

Temperature blank(s) included? Thermometer# _____ IR Gun# _____

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? _____ YES NO N/A

If YES, what time were they transferred to freezer? _____

9. Did all bottles arrive unbroken/unopened? _____ YES NO N/A

10. Are there any missing / extra samples? _____ YES NO N/A

11. Are samples in the appropriate containers for indicated tests? _____ YES NO N/A

12. Are sample labels present, in good condition and complete? _____ YES NO N/A

13. Do the sample labels agree with custody papers? _____ YES NO N/A

14. Was sufficient amount of sample sent for tests requested? _____ YES NO N/A

15. Are the samples appropriately preserved? _____ YES NO N/A

16. Did you check preservatives for all bottles for each sample? _____ YES NO N/A

17. Did you document your preservative check? (pH strip lot# _____) YES NO N/A

18. Did you change the hold time in LIMS for unpreserved VOAs? _____ YES NO N/A

19. Did you change the hold time in LIMS for preserved terracores? _____ YES NO N/A

20. Are bubbles > 6mm absent in VOA samples? _____ YES NO N/A

21. Was the client contacted concerning this sample delivery? _____ YES NO N/A

If YES, Who was called? _____ By _____ Date: _____

"When Quality Counts"

Analytical Report

WorkOrder: 1710462

Report Created for: Stellar Environmental Solutions

2198 Sixth St. #201
Berkeley, CA 94710

Project Contact: Henry Pietropaoli

Project P.O.:

Project Name: 2015-16; Paramount

Project Received: 10/11/2017

Analytical Report reviewed & approved for release on 10/17/2017 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Stellar Environmental Solutions
Project: 2015-16; Paramount
WorkOrder: 1710462

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Stellar Environmental Solutions

Project: 2015-16; Paramount

WorkOrder: 1710462

Analytical Qualifiers

S Surrogate spike recovery outside accepted recovery limits

a10 Reporting limit changed due to variable volume of air that pumped through each filter / sorbent tube.

e4 Gasoline range compounds are significant.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).
- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.
