Subject: Re: Additional contamination info near Emeryville Chevron - HMMP/HMBP

Mark & Paul,

FD was no help. All HMMP/HMBP are filed with Alameda County thru the Hazardous Waste Materials Dept. I update mine on a yearly basis or when it is request by CERS. The County should have CERS files for these locations. The County also has Business Licenses' and Building Permits on file showing what research is being conducted. They must also include Material Safety Data Sheets for all chemicals used.

The Emeryville addresses are:

1. 5885 Hollis St - Stem cell, boil-fuel, bio-chemical, cancer research
2. 5800 Hollis St - Stanford Research Center, surgery center
3. 5858 Horton St Suite 100 - East Bay Endoscopy
4. 4560 Horton St - Girfols Diagnostic Solutions, medical research
5. 5300 Chiron Way - Novartis, Bio medical, pharmaceutical research

As you can see there are a significant amount of research centers within a close proximity to the station. I would appreciate if these address' can be researched to see exactly what chemicals they are using.

Thank you for your assistance,

Marcia Ravan
