Dated November 6, 2015
- 2) Phase II Environmental Site Assessment at 1750 Webster Street and 301 19th Street in Oakland, California
By GeoSolve, Inc.
Dated November 7, 2015

Dear Mr. Wood:

At your request, **GeoSolve, Inc.** had conducted a Phase II Environmental Site Assessment (ESA) for the above referenced property. The subject property for this Phase II ESA includes 1810 Webster Street in Oakland, California. The subject site consists of one parcel bounded by a building along 19th Street to the east, Webster Street to the north, and parking lot parcels to the south and west Assessor Parcel Number (APN) 008-0625-018. The subject site is vacant and used a parking lot. The site vicinity is shown on Figure 1, Site Vicinity Map.

Background

Based on review of older reports documented in our Phase I ESA (Reference 1), elevated concentrations of total petroleum hydrocarbons reported as gasoline (TPHg) and benzene were detected in groundwater up to 200,000 micrograms per liter ($\mu\text{g}/\text{L}$) and 14,000 $\mu\text{g}/\text{L}$ on the

1807 Santa Rita Road, Suite D-165 • Pleasanton, CA 94566
rcampbell@geosolve-inc.com • (925) 963-1198

southern portion of the property along Webster Street. Based on the findings in Reference 1, the elevated concentrations of TPHg, benzene, toluene, ethyl benzene, and total xylenes (BTEX) appear to have originated from 1721 Webster Street, which is situated approximately 300 feet northwest of the subject property and immediately up-gradient.

In November 2015, *GeoSolve, Inc.* advanced one boring on 1750 Webster Street and two borings on 301 19th Street to evaluate the concentrations of petroleum hydrocarbons in subsurface soil and groundwater in our Phase II ESA (Reference 2). Based on the laboratory analytical results of soil samples, concentrations of TPHg, BTEX, or MTBE were not detected in all soil samples analyzed from borings B-1 through B-3 as shown on Table 1, with the exception of total xylenes. Total xylenes was the only chemical constituent detected in soil sample B1-25 at 0.016 mg/Kg, which is significantly below the California Regional Water Quality Control Board – Region 2 (RWQCB) Environmental Screening Level (ESL) of 111 mg/Kg for residential development (Table B, December 2013).

Lead was detected at 170 mg/Kg in soil sample B1-5, which exceeded the residential ESL of 80 mg/Kg and lead was detected below the residential ESL in all other soil samples analyzed from borings B-1 through B-3.

TPHg, BTEX, MTBE and lead were not detected in groundwater samples collected from borings B-2 or B-3. MTBE was not detected in groundwater sample B-1. Lead was detected up to 0.54 micrograms per liter ($\mu\text{g/L}$) in groundwater sample B-1. An elevated concentration of TPHg was detected at 26,000 $\mu\text{g/L}$, which exceed the residential ESL of 500 $\mu\text{g/L}$ in groundwater sample B-1. Benzene, toluene, ethyl benzene and total xylenes exceeded residential ESLs of 27 $\mu\text{g/L}$, 130 $\mu\text{g/L}$ and 100 $\mu\text{g/L}$, respectively.

The purpose of conducting this Phase II ESA is to evaluate the current concentrations of TPHg, BTEX, volatile organic compounds (VOCs) and lead within the subsurface soil and groundwater beneath the subject site prior to purchasing the land.

PHASE II ENVIRONMENTAL SITE ASSESSMENT

Prior to commencement of fieldwork, *GeoSolve, Inc.* visited the subject property, marked three locations with white paint, and contacted underground service alert (USA) 48-hours before drilling activities. In addition, a Site-Specific Health and Safety Plan was prepared for the project, and was kept on site during fieldwork activities. In addition, a drilling permit was obtained from the Alameda County Public Works Department prior to commencement of fieldwork.

Fieldwork

Once USA was notified and the underground utilities were marked, a *GeoSolve, Inc.* field geologist observed Penecore Drilling, Inc., a State-licensed drilling contractor (C57-906899) of Woodland, California, advance three borings (B-1 through B-3) to groundwater on February 2, 2016. The locations of borings B-1 through B-3 are shown on Figure 2. The borings were

advanced using a direct-push drilling rig, equipped with Enviro-Core (dual-tube) sampling system. Each sampling rod was lined with Acetate sample liners and each boring was continuously cored. Each boring was logged in accordance with the Unified Soil Classification System (USCS) and soil samples were hand-sawed at 5-feet, 10-feet, 15-feet, and 20-feet, 25-feet and some to 30-feet below ground surface (bgs). The soil sample ends were covered with Teflon tape, capped, labeled, and placed within a pre-chilled ice chest for temporary storage.

After the soil samples were collected from each boring, clean 1-inch diameter PVC well screening was inserted into each boring and groundwater “grab” samples were collected from each boring using a hand bailer, and decentered into laboratory supplied and pre-hydrochloric acidified 40 milliliter (ml) VOAs. Each VOA was sealed, checked for headspace, labeled, and placed within a pre-chilled ice-chest for temporary storage.

Once soil and groundwater samples were collected from each boring, the borings were backfilled with neat cement to grade.

Soil Sample Description

The subsurface materials encountered at the site included brown fine sandy clay beneath the asphalt with minor fill immediately beneath the asphalt, to approximately 6 feet bgs in boring B-1 and approximately 9 feet in borings B-2 and B-3. The fine sandy clay was underlain by brown silty fine sand in boring B-1 to 7.5 feet bgs, and was underlain by light brown silty clay to approximately 10 feet bgs. The silty clay was underlain by gray brown silty fine sand to approximately 14 feet bgs and was underlain by brown fine sand to approximately 20 feet bgs. The brown fine sand was underlain by dark olive medium sand to approximately 22.5 feet bgs, with a strong hydrocarbon odor. Light brown fine sand with silt was encountered in borings B-2 and B-3 from approximately 9 feet bgs to approximately 11 feet and 13 feet bgs, which was underlain by brown fine sand to approximately 19 feet and 20 feet bgs. The brown fine sand was underlain by dark olive fine to medium sand from 19 feet and 20 feet bgs to approximately 22.5 feet bgs with a strong hydrocarbon odor.

Olive discoloration and strong petroleum odors were noted in borings B-1 through B-3 at approximately 19 feet and 20 feet bgs. Groundwater was encountered at 19 feet bgs in boring B-2 and 20.5 feet bgs in borings B-1 and B-3. Copies of the Boring Logs are attached to this letter report as Appendix A.

Laboratory Methods and Analyses

Selected soil and groundwater samples were delivered under chain-of-custody documentation to McCampbell Analytical, Inc., a State-certified hazardous waste sampling laboratory (Certification No. 1644) in Pittsburg, California.

Soil samples B1-1, B2-1, and B3-1 were analyzed for total lead using Environmental Protection Agency (EPA) SW3050B/SW6010B. Soil samples B1-15, B1-20, B1-22.5, B2-15, B2-20, B2-22.5, B3-15, B3-20, and B3-22.5 and groundwater grab samples B-1, B-2, and B-3 were analyzed

for TPHg, BTEX, volatile organic compounds (VOCs) and methyl tertiary butyl ether (MTBE) using EPA Methods SW5030B/SW8021B/8015m and SW8260B. Groundwater grab samples were also analyzed for lead using EPA Method E200.8, and was filtered prior to analysis.

A summary of laboratory analyses are shown on Tables 1 and 2, Laboratory Analytical Results of Soil Samples and Groundwater Samples and a copy of the McCampbell Analytical, Inc. Laboratory Analytical Report and Chain-of-Custody Documents are attached to Appendix B.

ESLs	---	500	27	130	43	100	1,800	100	80

$\mu\text{g/L}$ = micrograms per liter, equivalent to parts per billion (ppb).
 a = t-Butyl alcohol (TBA), 670 $\mu\text{g/L}$ of 1,2,4-Trimethylbenzene and 460 $\mu\text{g/L}$ of total xylenes.
 b = n-Propyl benzene, 120 $\mu\text{g/L}$ Naphthalene, and 110 $\mu\text{g/L}$ of ethyl benzene.
 c = 1,2,4-Trimethylbenzene, 280 $\mu\text{g/L}$ of benzene, 1,100 $\mu\text{g/L}$ of toluene, and 930 $\mu\text{g/L}$ of total xylenes.

Discussion

Based on the laboratory analytical results of soil samples, concentrations of TPHg, BTEX, or MTBE were not detected in soil samples analyzed from borings B-1 through B-3 at 15 feet and 20 feet bgs as shown on Table 1, with the exception of a minor detection of ethyl benzene at 0.12 mg/Kg at 20 feet bgs in boring B-2. TPHg was detected above the California Regional Water Quality Control Board – Region 2 (RWQCB) Environmental Screening Levels (ESLs) for residential development (December 2013) of 100 mg/Kg. Lead was detected above the ESL of 80 mg/Kg in soil sample B2-1 at one foot bgs at 130 mg/Kg. Lead was detected below the ESL in all other soil samples analyzed. Benzene or MTBE were not detected in any soil sample analyzed from borings B-1 through B-3.

TPHg and benzene were detected above the residential ESLs of 500 micrograms per liter ($\mu\text{g/L}$) and 27 $\mu\text{g/L}$ in groundwater samples B-1, B-2, and B-3. Elevated concentrations of toluene, ethyl benzene and total xylenes were detected in groundwater sample B-3, which exceeded the residential ESLs of 130 $\mu\text{g/L}$, 43 $\mu\text{g/L}$ and 100 $\mu\text{g/L}$, respectively. MTBE was not detected in any groundwater sample analyzed.

Although minor VOCs were detected in both soil and groundwater samples, all VOCs were non-chlorinated.

Conclusions

Based on the field and laboratory analytical results discussed in this Letter Report, *GeoSolve, Inc.* concludes the following:

- No detectable concentrations of TPHg, MTBE or BTEX were reported in all soil samples analyzed from 15-feet and 20-feet bgs in borings B-1 through B-3, with the exception of soil sample B2-20, which indicated a very low concentration of ethyl benzene at 0.12 mg/Kg.
- No detectable concentrations of benzene or MTBE were detected in any soil sample analyzed from borings B-1 through B-3. In addition, no chlorinated VOCs were detected in any soil and/or groundwater sample collected from borings B-1 through B-3.
- Elevated concentrations of TPHg (14,000 µg/L), benzene (110 µg/L), toluene (450 µg/L), ethyl benzene (110 µg/L), and total xylenes (300 µg/L) exceed the residential ESLs in groundwater samples B-1 through B-3. These elevated concentrations of TPHg and BTEX are most likely from the up-gradient and off-site source property at 1721 Webster Street.
- Lead was either not detected or detected below the ESL of 80 mg/Kg in most soil samples analyzed, with the exception of soil sample B2-1, which indicated a lead concentration of 130 mg/Kg.

Recommendations

Based on the conclusions presented in this Letter Report, *GeoSolve, Inc.* concludes the following:

Based on the conclusions presented in this Letter Report, GeoSolve, Inc. recommends no further action is required on the subject property since the groundwater contamination originated from an off -site and up-gradient source according to RWQCB regulations.

If you have any questions or need further information regarding this Phase II ESA, please call us at (925) 963-1198.

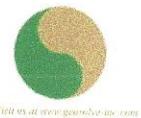

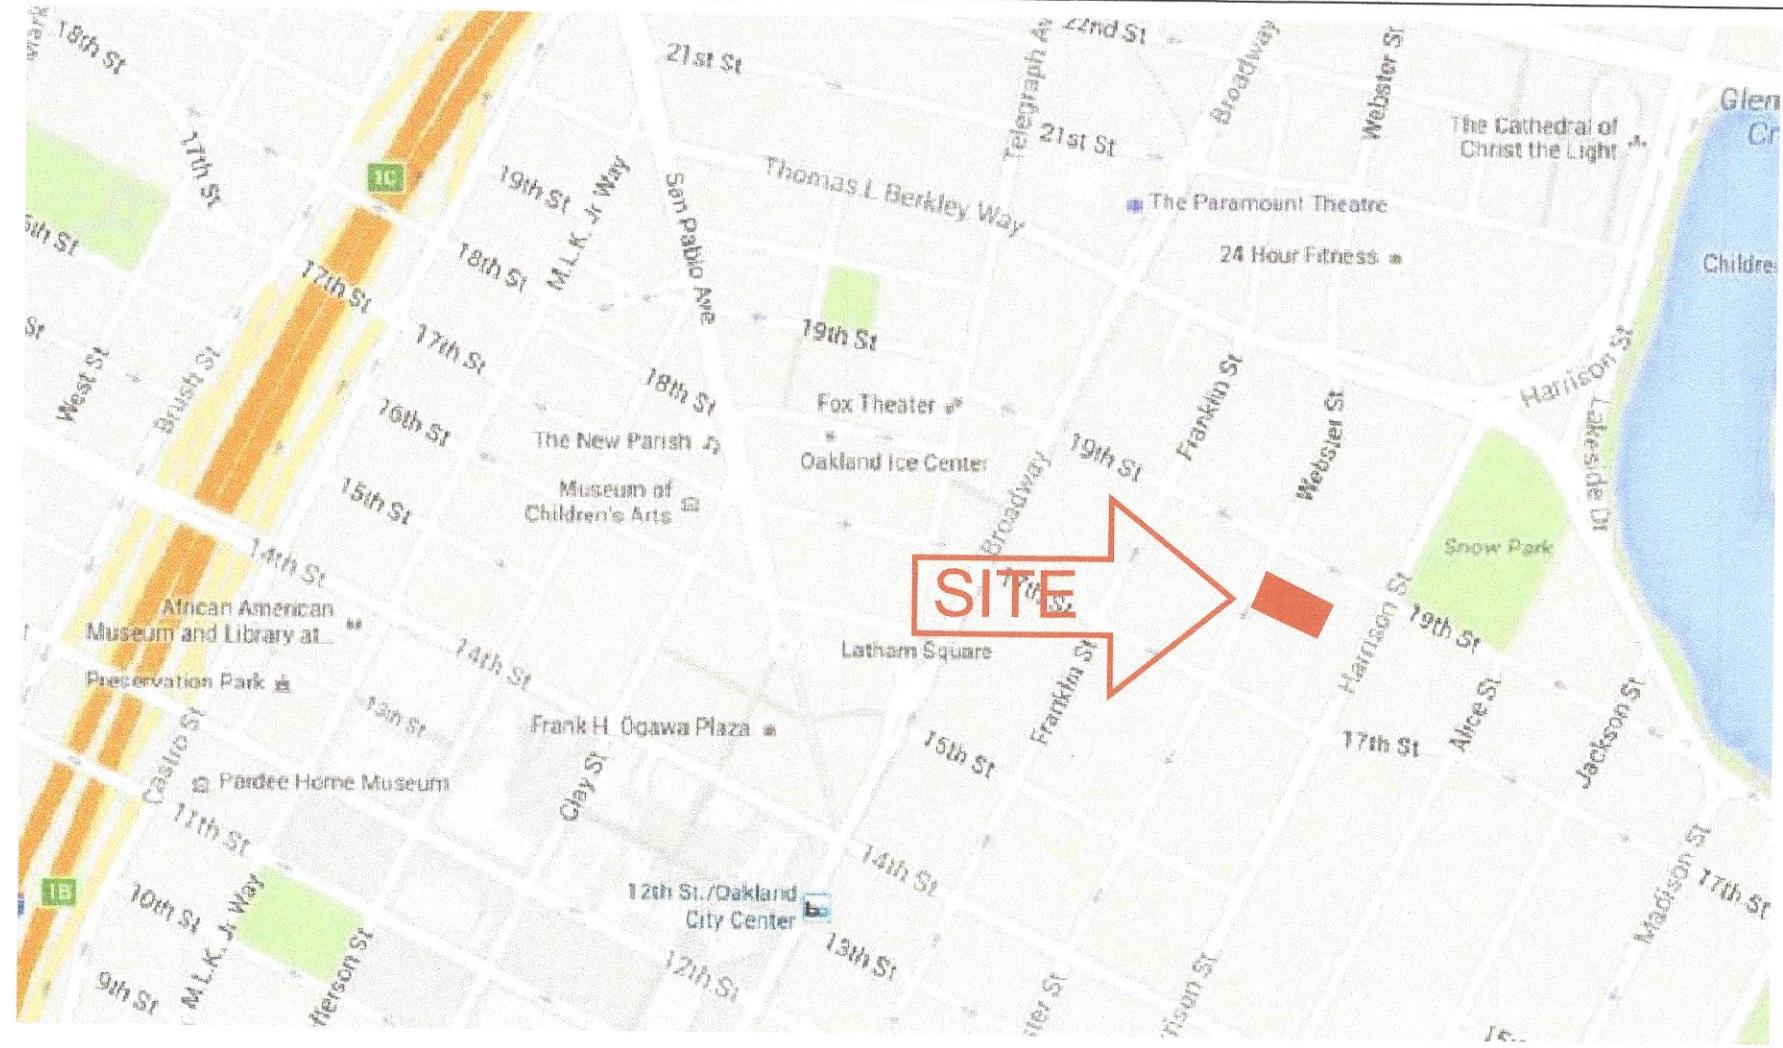

Sincerely,
GeoSolve, Inc.

Robert D. Campbell, M.S., P.G., C.E.G., Q.S.D.
Principal Engineering Geologist

Client: Geosolve, Inc.
Project: 2016-03; Lennar-Oakland
WorkOrder: 1602148

Analytical Qualifiers

- S Surrogate spike recovery outside accepted recovery limits
c4 surrogate recovery outside of the control limits due to coelution with another peak(s) / cluttered chromatogram.
c7 Surrogate value diluted out of range
d1 weakly modified or unmodified gasoline is significant
d7 strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9 no recognizable pattern
d17 Reporting limit for MTBE raised due to co-elution with non-target peaks.

Quality Control Qualifiers

- F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validated the prep batch.
F2 LCS recovery for this compound is outside of acceptance limits.

**MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type is not specified on the chain of custody, then MAI will default to metals by E200.8.
